Why I asked for John Musson's talk

Goubau Line with 3-Port Net. An.

This plot shows the diff/sum algorithm is far less accurate than the logX algorithm. 7 mm computed vs 6 mm actual, for instance. 2012 data, perhaps clamped at (0,0) and (10,10)

More recent data, plotted by me

Diagonal applied by hand. Residuals = measured-actual, are small.
Most plots that follow are of residuals. X_meas = diff/sum algorithm

Full span of X data

Bivariate Fit of X_meas By X_pos

— Linear Fit

Linear Fit

$$X_meas = 0.0172474 + 0.9514854 * X_pos$$

Summary of Fit

RSquare	0.997983
RSquare Adj	0.997982
Root Mean Square Error	0.188356
Mean of Response	0.017247
Observations (or Sum Wgts)	3721

Bivariate Fit of X_meas_log By X_pos

— Linear Fit

Linear Fit

$$X_meas_log = 0.0181101 + 0.9672984 * X_pos$$

Summary of Fit

RSquare	0.997921
RSquare Adj	0.99792
Root Mean Square Error	0.19439
Mean of Response	0.01811
Observations (or Sum Wgts)	3721

For all Y in [-7.5, 7.5] mm

Full span of Y data

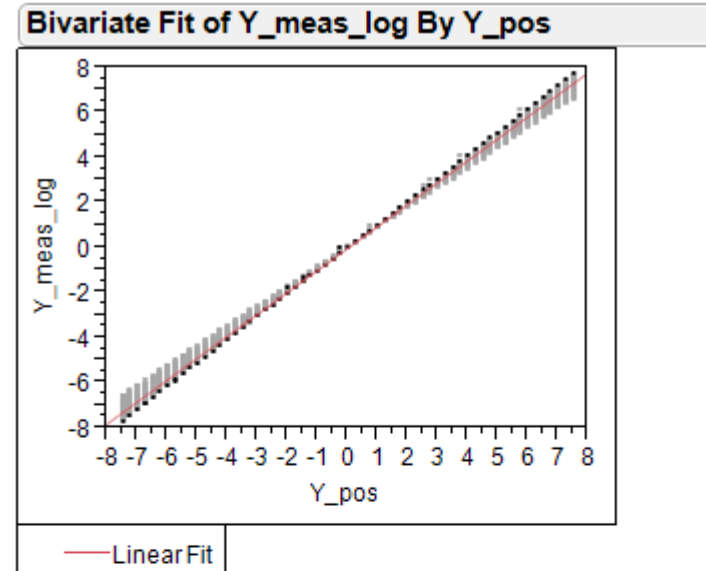

Linear Fit

$$Y_meas = -0.00765 + 0.9513095 * Y_pos$$

Summary of Fit

RSquare	0.997938
RSquare Adj	0.997937
Root Mean Square Error	0.190387
Mean of Response	-0.00912
Observations (or Sum Wgts)	3721

Linear Fit

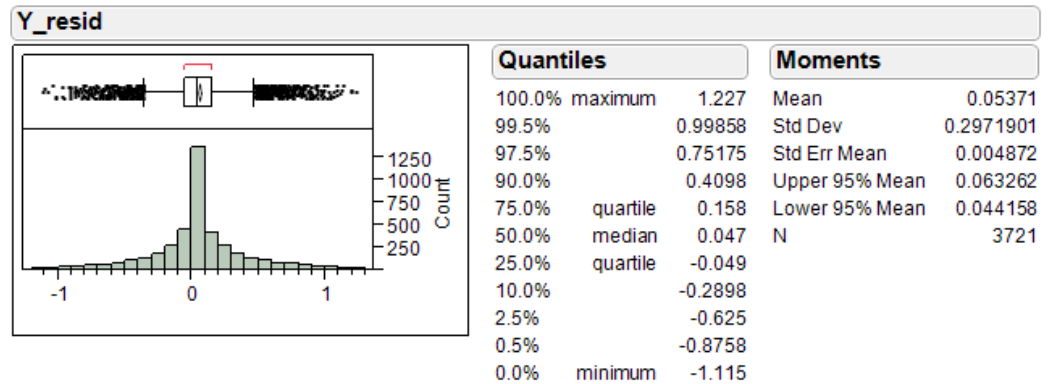

$$Y_meas_log = -0.008137 + 0.9736574 * Y_pos$$

Summary of Fit

RSquare	0.997845
RSquare Adj	0.997844
Root Mean Square Error	0.199219
Mean of Response	-0.00964
Observations (or Sum Wgts)	3721

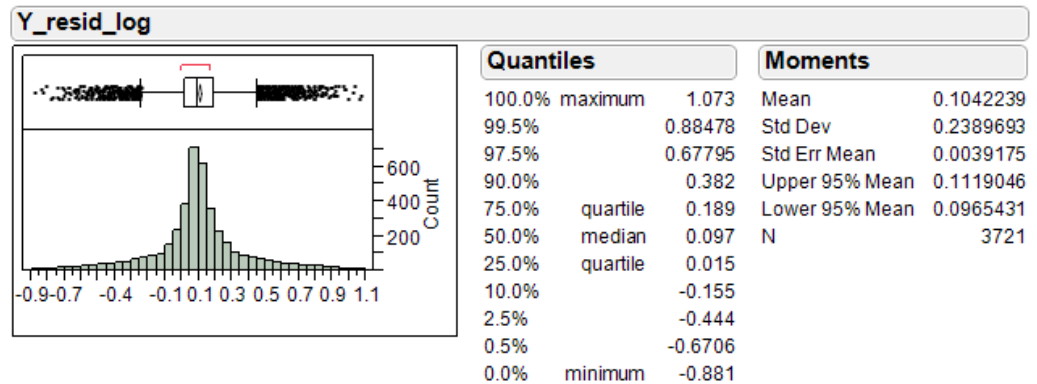

For all X in [-7.5, 7.5] mm

Residuals with encoder wire positions

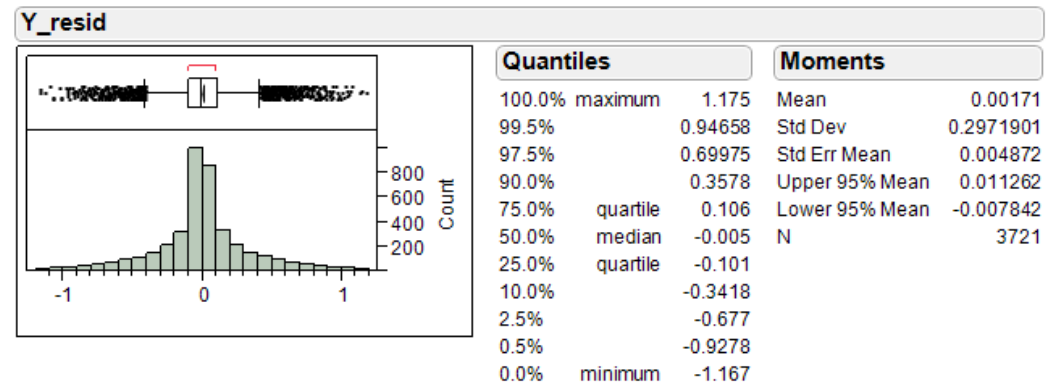

Full [-7.5,7.5] mm span,
both planes.

Residuals with John's adjusted zero

Full [-7.5,7.5] mm span, both planes.

Residuals with zero adjusted to zero their means

Full [-7.5,7.5] mm span, both planes.

Residuals $[-5,5]$ span adjusted near-zero mean

X residuals with $Y=[-1,1]$ mm

Full $[-7.5, 7.5]$ mm span in X plane.
Residuals are subset of those
adjusted to have near-zero mean.

Conclusions

- John's presentation spoke to resolution as a function of beam current and showed that 100 μm resolution is obtained around 100 nA beam current within [-5,5] mm span in both planes.
- The G-line data shown here demonstrates that either algorithm provides 100 μm accuracy at only $\sim 80\%$ of points within that span for M15 can.
- John will scan a M20 can, used at extraction, at my request. It will be interesting to compare those results with the previous figure.
