

Gamma-ray vortex beams carrying orbital angular momentum

Yoshitaka Taira

National Institute of Advanced Industrial Science and Technology (AIST), Japan
Visiting scientist: Mississippi State University and Jefferson Lab.

In this seminar...

I will talk about
so called
vortex beam,
orbital angular momentum beam,
twisted beam.

Does someone know that?

Outline

■ Polairzation and wave fronts of light

■ Optical vortex

Electric field and Poynting vector

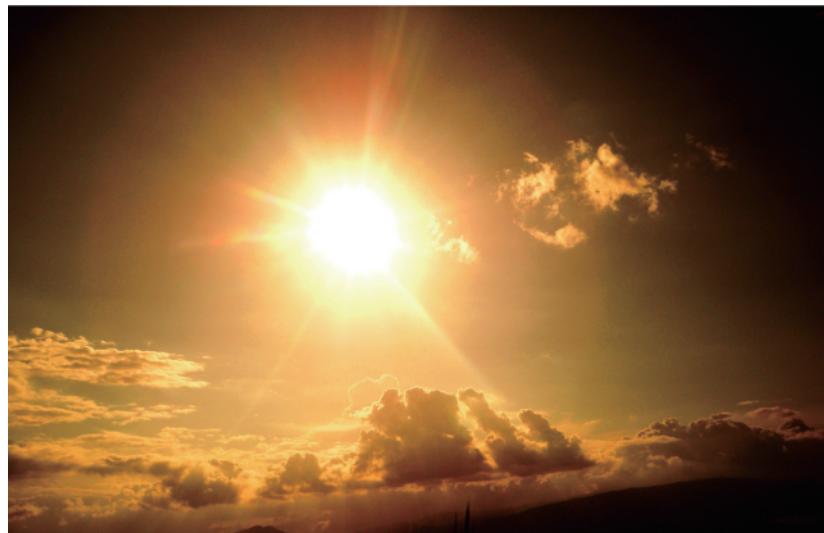

Generation, Measurement, Application

Electron vortex, X-ray vortex

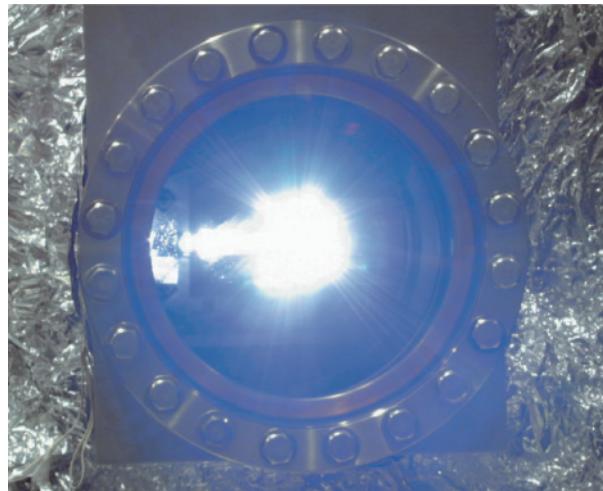

■ Gamma-ray vortex

Light

Sun

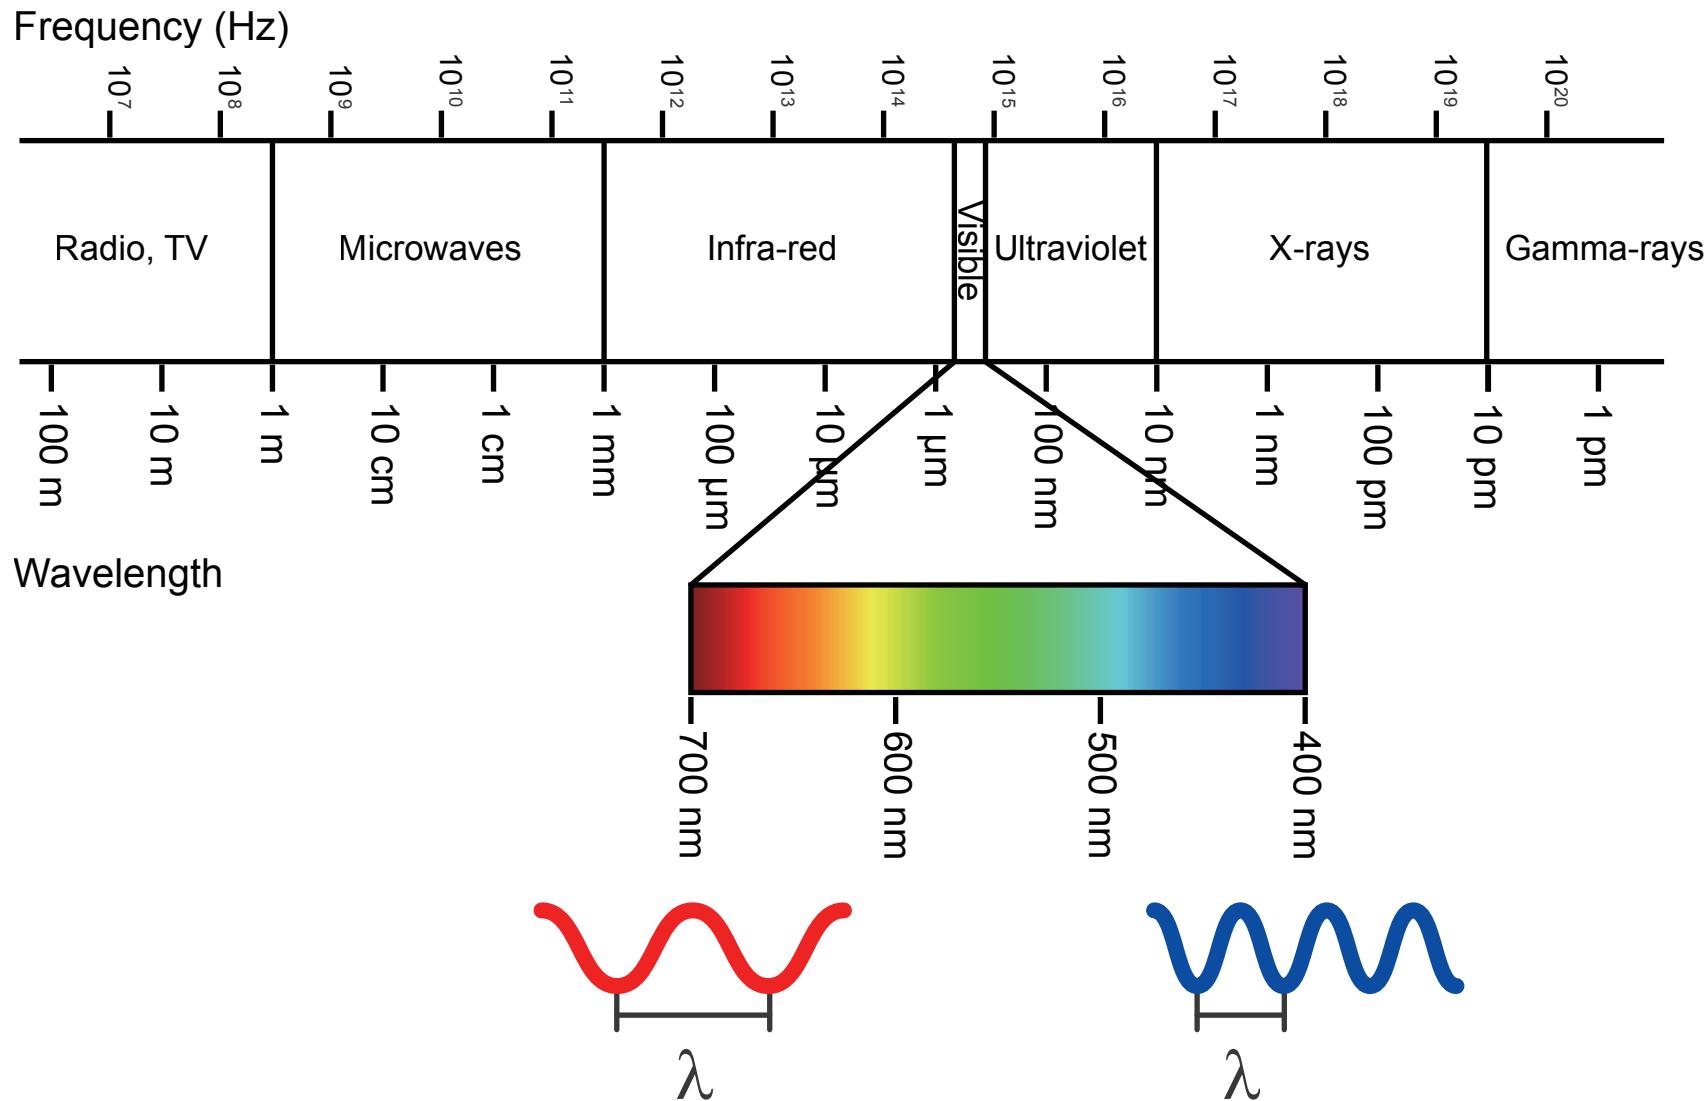

LED

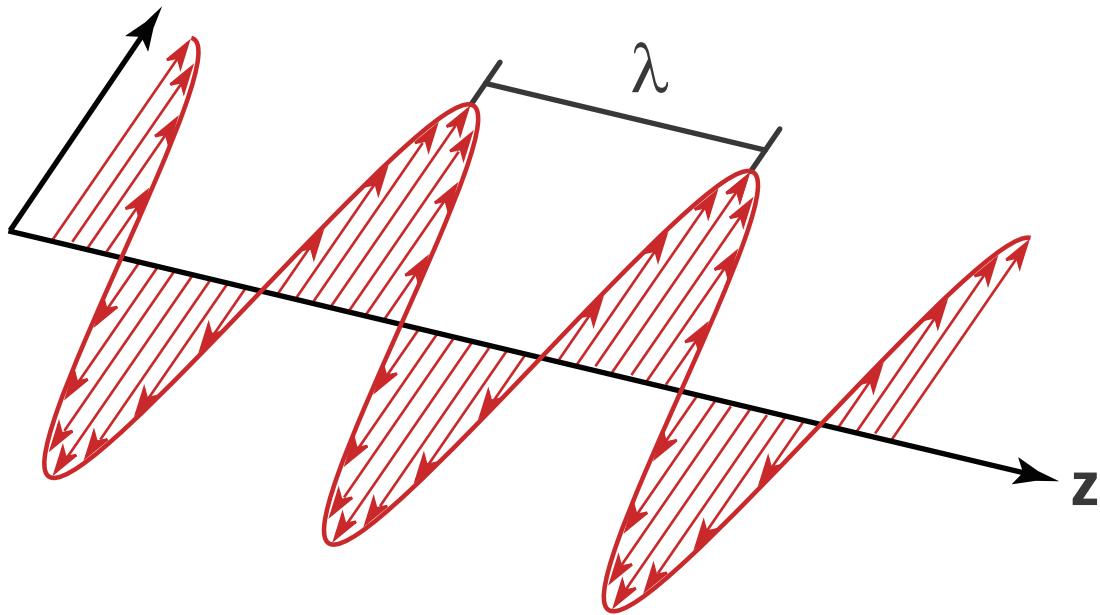

Synchrotron light

[Wikipedia](#)

Electromagnetic wave spectrum

Linear polarization

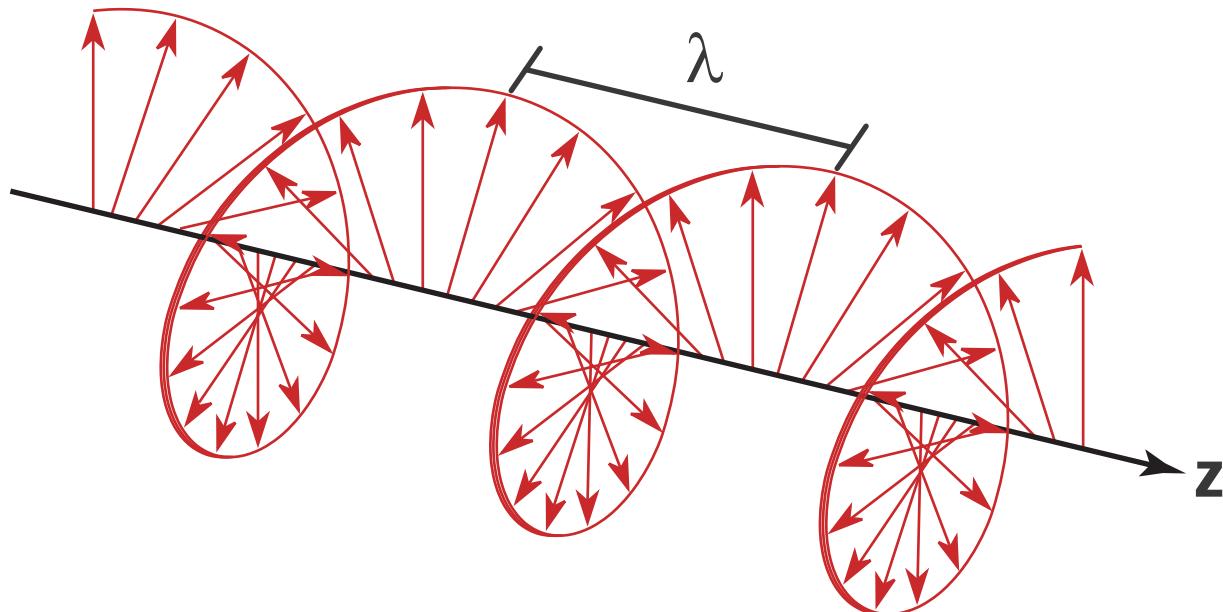

y Incoming electric field

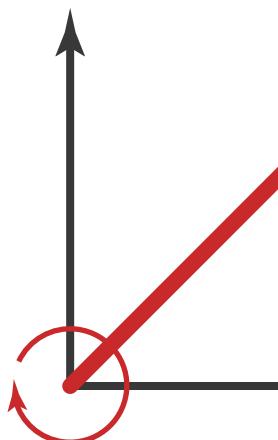

$$\mathbf{E} = \mathbf{e}_x E_0 \exp(i k z - i \omega t)$$

x

Circular polarization

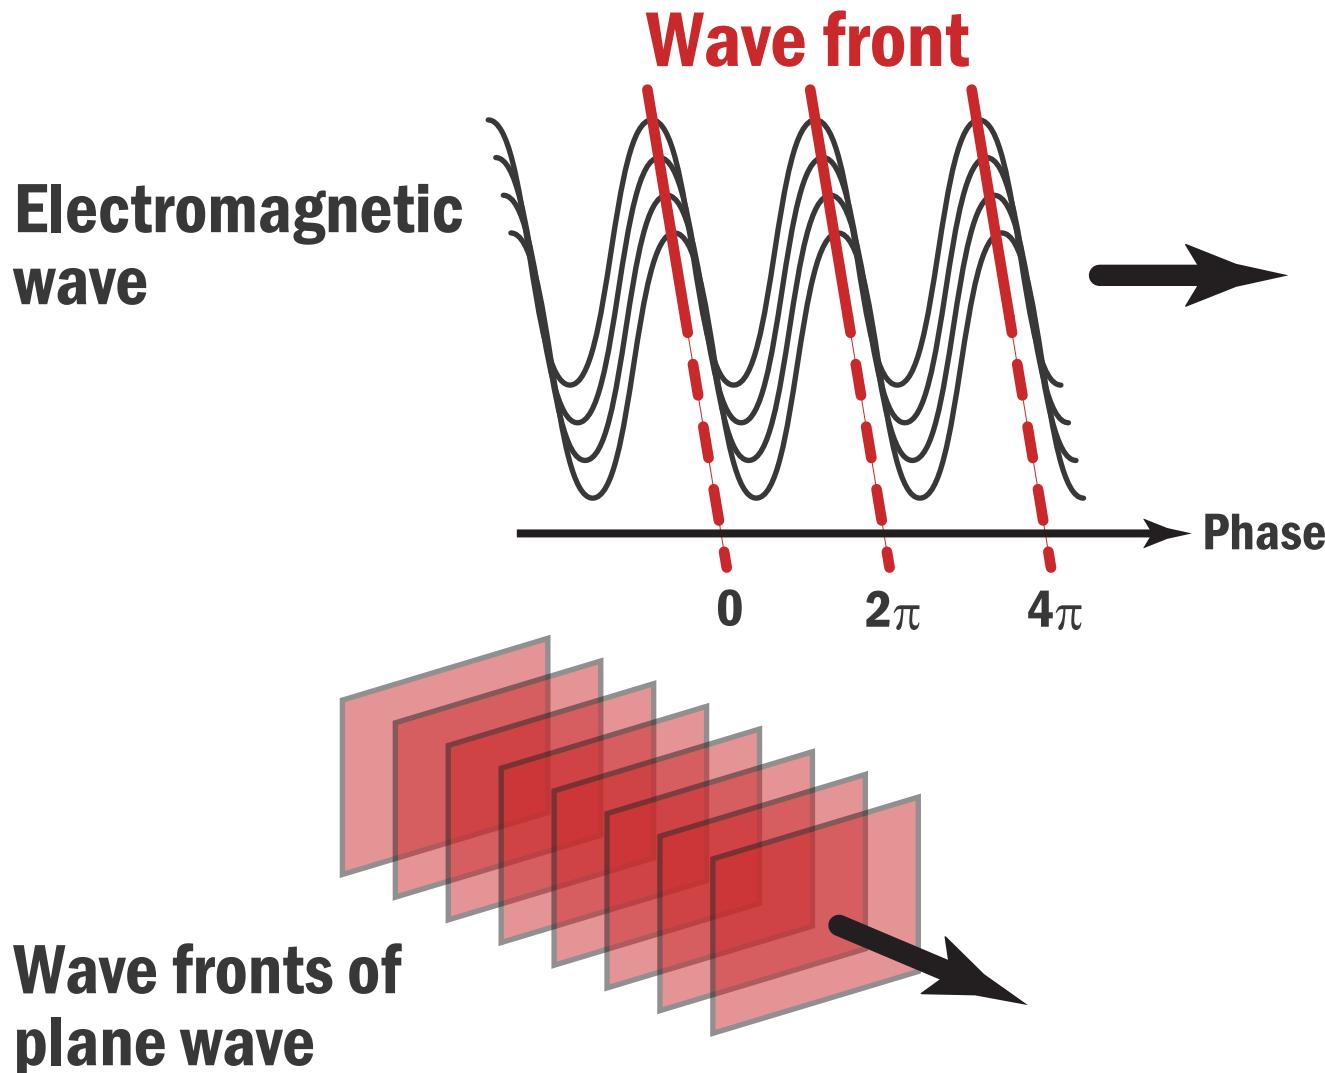

y **Incoming electric field**

$$\mathbf{E} = \frac{\mathbf{e}_x + i\sigma \mathbf{e}_y}{\sqrt{2}} E_0 \exp(i k z - i \omega t)$$

Spin angular momentum (SAM)
 $= \sigma \hbar$ ($\sigma = \pm 1$)

Wave front -position of the same phase-

Outline

■ Polairzation and wave fronts of light

■ Optical vortex

Electric field and Poynting vector

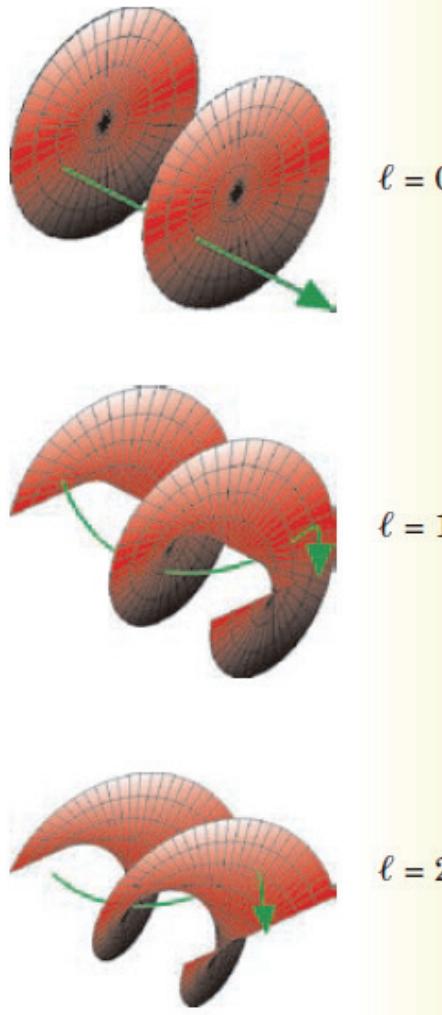

Generation, Measurement, Application

Electron vortex, X-ray vortex

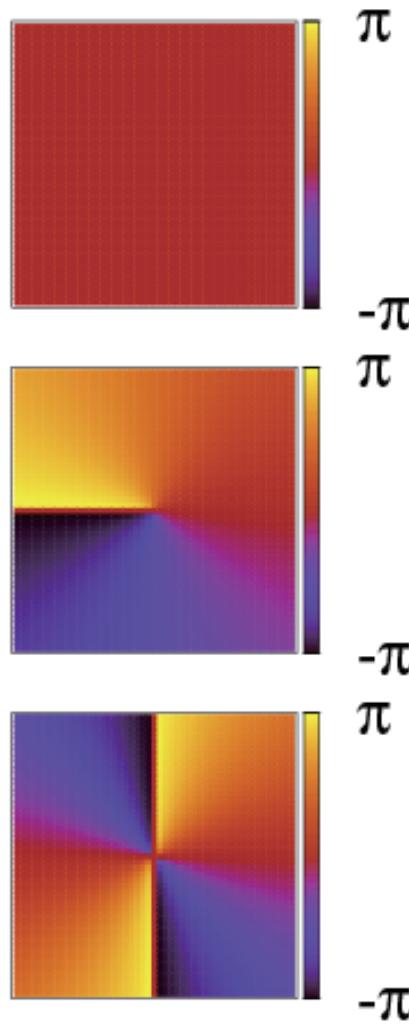

■ Gamma-ray vortex

Vortex beams -Helical wave front creation-

Wave front

Phase

- Forming a helical wave front.

$$E \propto \exp(i\ell\phi)$$

- Carrying orbital angular momentum (OAM)

$$\ell\hbar$$

- Total AM
= OAM + SAM
= $\ell\hbar + \hbar$

M. Padgett et al., Phys. Today 57 (2004) 35.

Electric field and magnetic field

Electric field in the paraxial approximation

$$\mathbf{E} \propto \left(u \mathbf{e}_x + \boxed{\frac{i}{k} \frac{\partial u}{\partial x} \mathbf{e}_z} \right) \exp(i k z - i \omega t) \quad \mathbf{u}: \text{wave amplitude}$$

Magnetic field

$$\mathbf{B} \propto \left(u \mathbf{e}_y + \boxed{\frac{i}{k} \frac{\partial u}{\partial y} \mathbf{e}_z} \right) \exp(i k z - i \omega t)$$

Electric and magnetic field is slightly inclined against the z-axis.

L. Allen et al., Prog. Opt. 39 (1999) 291.

Poynting vector

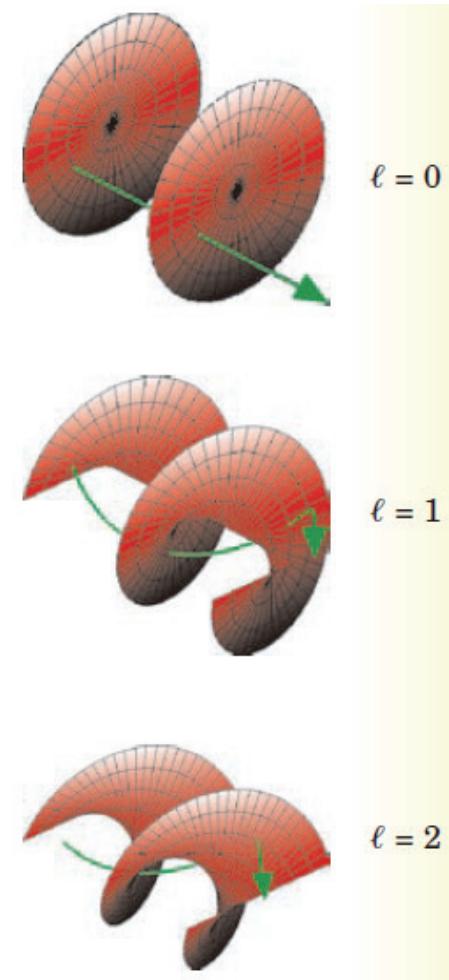

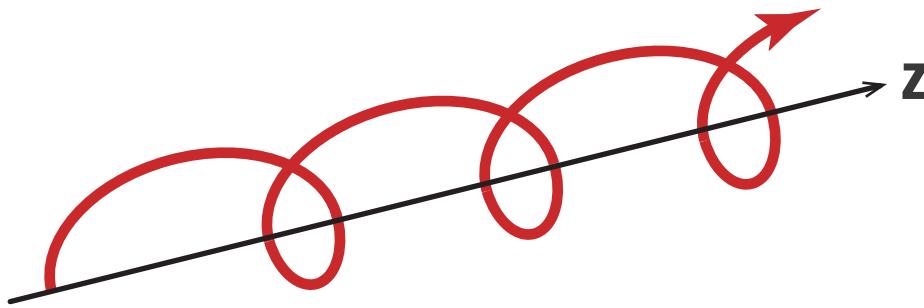

Poynting vector of Laguerre Guassian mode

$$\mathbf{S} = \mathbf{E} \times \mathbf{B} \propto \left(\frac{\rho z}{z^2 + z_R^2} \mathbf{e}_\rho + \frac{\ell}{k\rho} \mathbf{e}_\phi + \mathbf{e}_z \right)$$

spread of the beam

$$\frac{\ell}{k\rho}$$

Spiral Poynting vector
gives rise to OAM

Light carrying SAM and OAM

We can generate

Linerly polarized laser carrying OAM

SAM = 0, OAM = $\ell\hbar$,

Total AM = $\ell\hbar$

Circularly polarized laser carrying OAM

SAM = $\pm 1\hbar$, OAM = $\ell\hbar$,

Total AM = $\pm 1\hbar + \ell\hbar$

Outline

■ Polairzation and wave fronts of light

■ Optical vortex

Electric field and Poynting vector

Generation, Measurement, Application

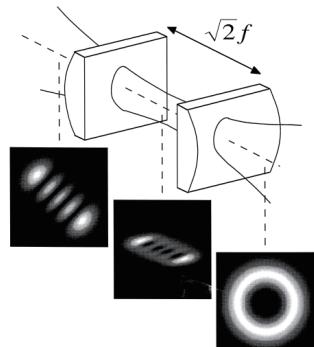

Electron vortex, X-ray vortex

■ Gamma-ray vortex

Generation of vortex beams

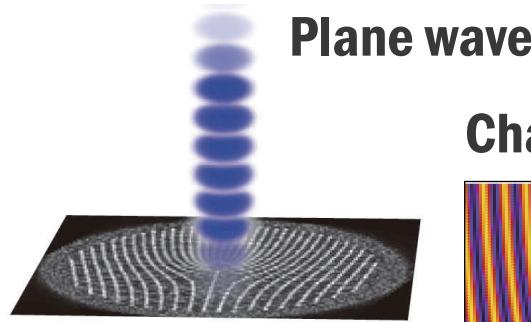

Special filters

Cylindrical lens

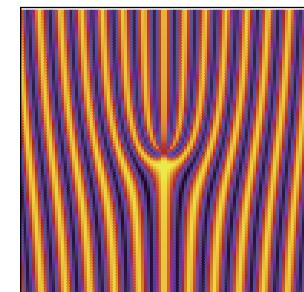

Holographic fork grating

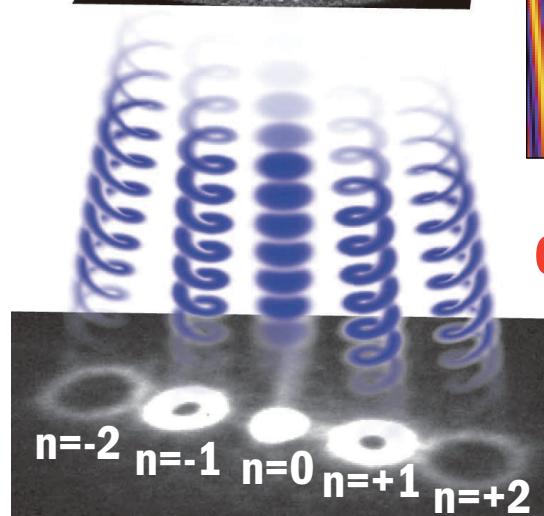

Plane wave

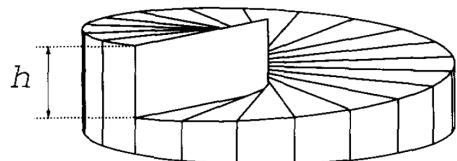

Charge, $m = 4$

OAM = $m \times n$

Spiral phase plate

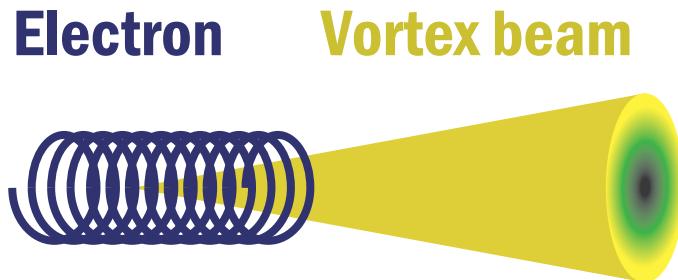

J. Courtial et al., Opt. Comm. 159 (1999) 13.

M. W. Beijersbergen et al., Opt. Comm. 112 (1994) 321.

Y. Taira, Gamma-ray vortex beams carrying orbital angular momentum

Generation of vortex beams

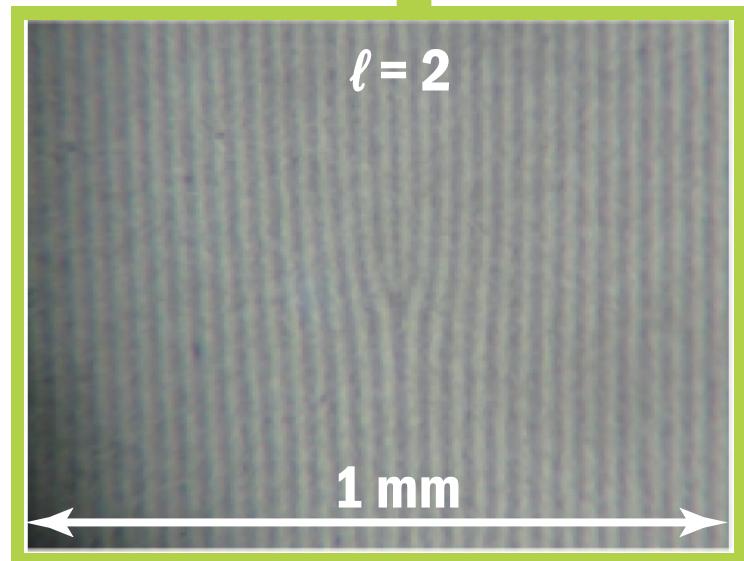

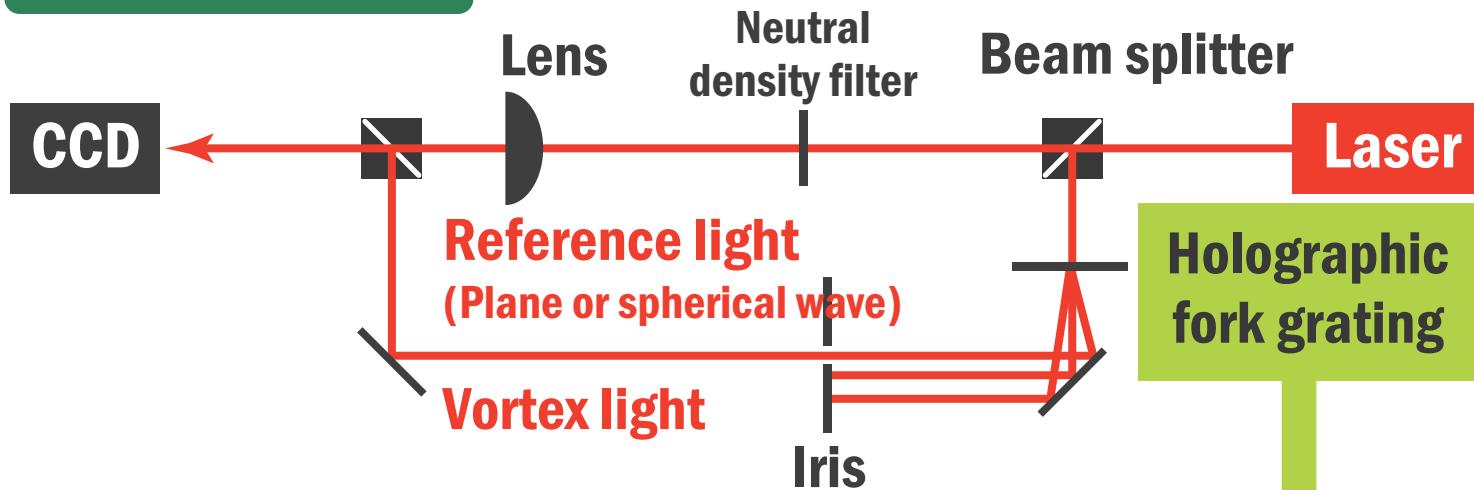

Without filters

**Electromagnetic radiation
from an electron**

Measurement of vortex beams

Interferometer

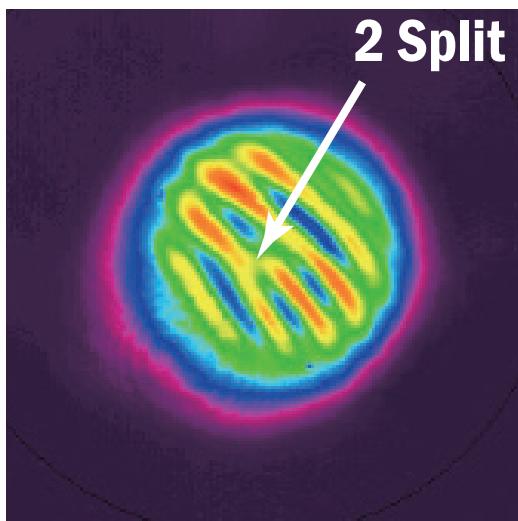

Interference fringe pattern

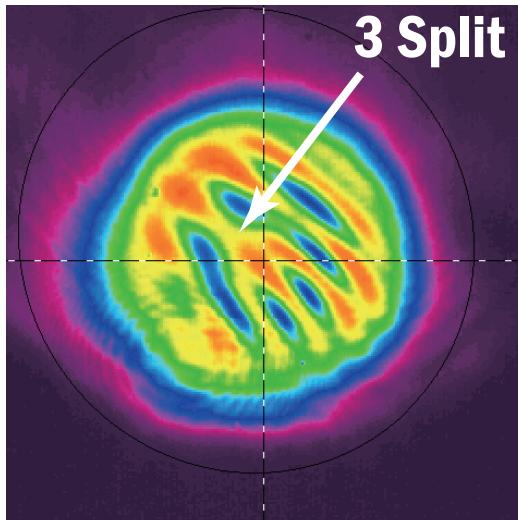

OAM value ℓ

1

Plane wave + vortex

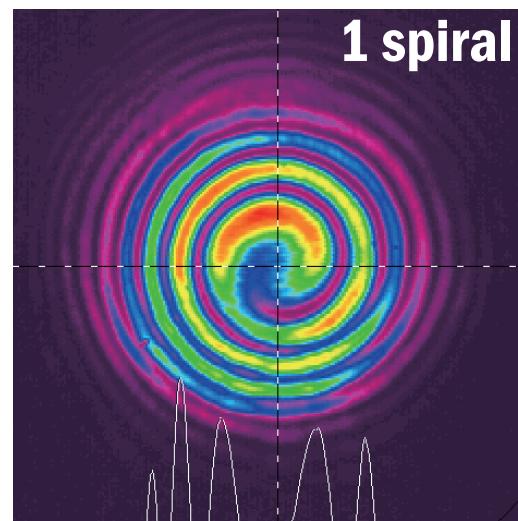

2

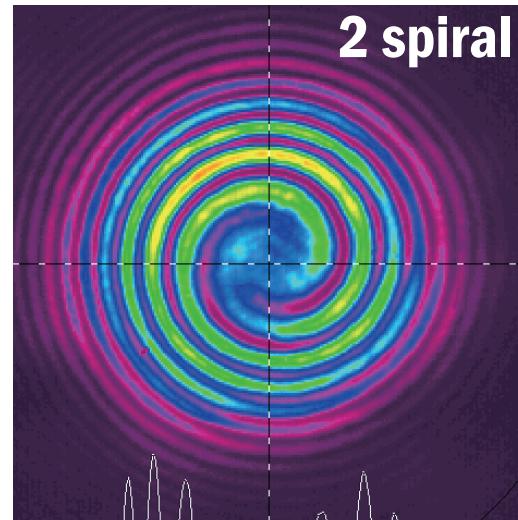

Spherical wave + vortex

1 spiral

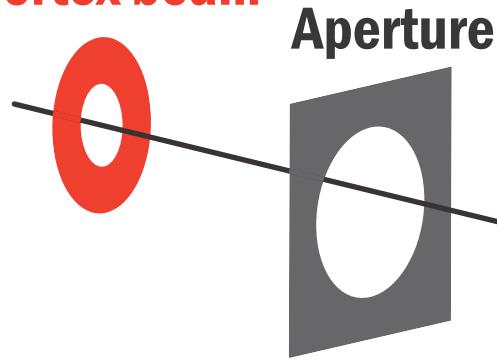

2 spiral

Measurement of vortex beams

Diffraction methods

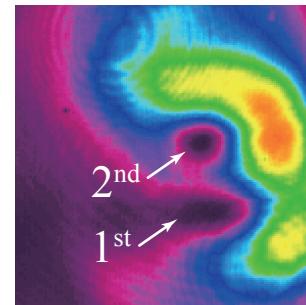

Vortex beam

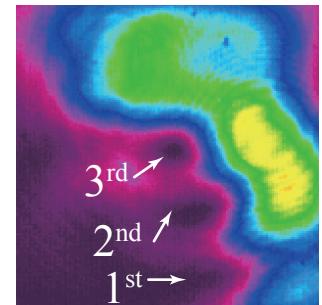

Detection of
diffraction
pattern

Circle

$\ell = 2$

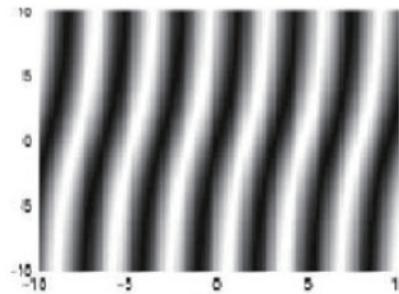

$\ell = 3$

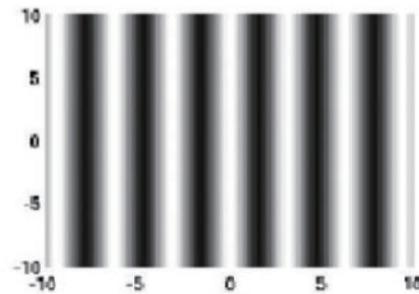

Y. Taira et al., Opt. Lett. (2017).

Double slit

$\ell = 1$

$\ell = 0$

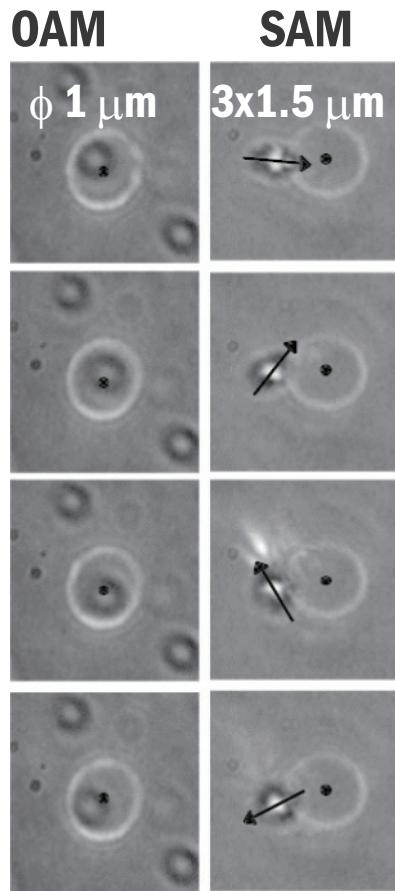

H. I. Sztul et al., Opt. Lett. 31 (2006) 999.

J. M. Hickmann et al., PRL 105 (2010) 053904.

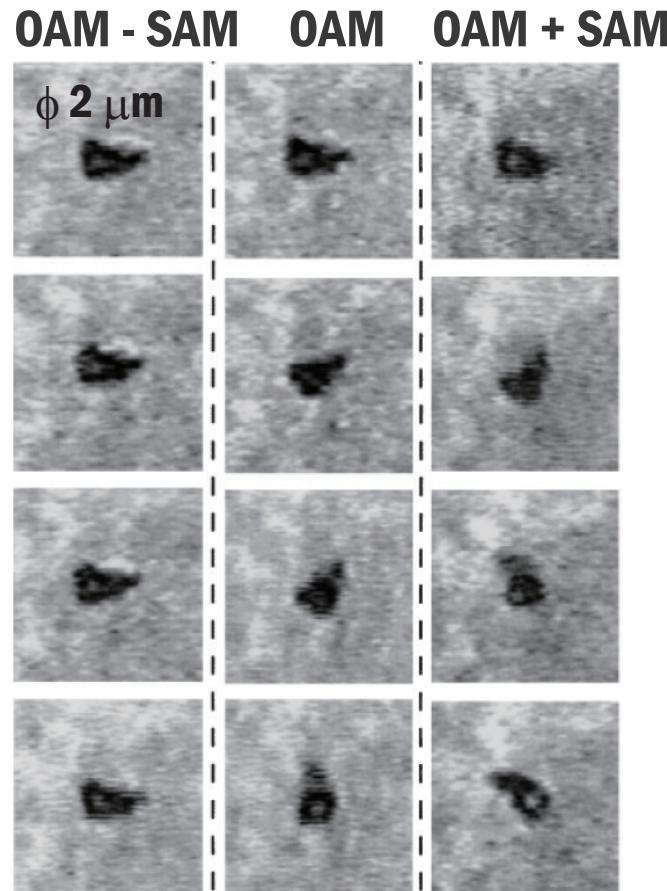

Application of vortex beams

Tweezer (OAM transfer to micro particle)

Independent OAM and SAM

Combination of OAM and SAM

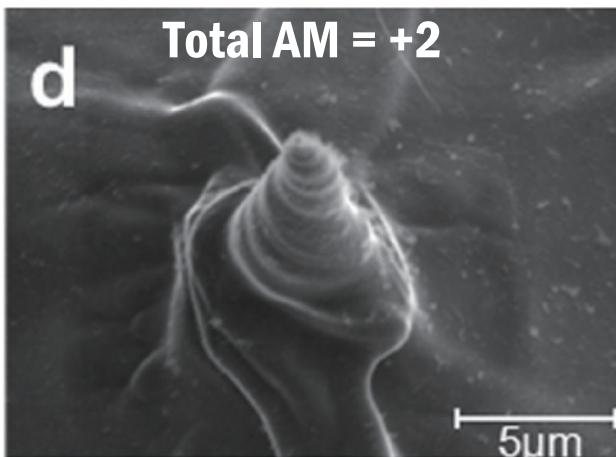

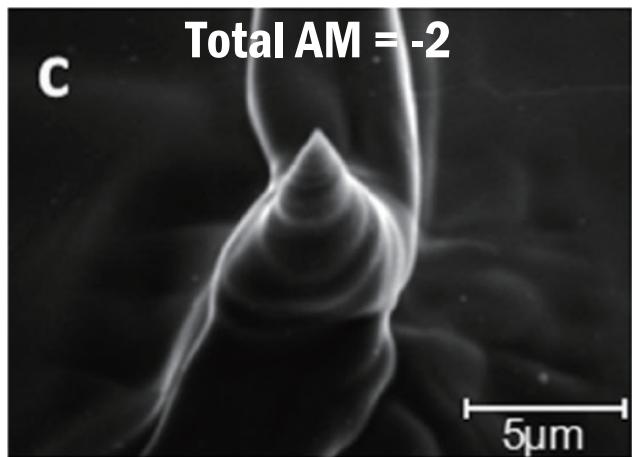

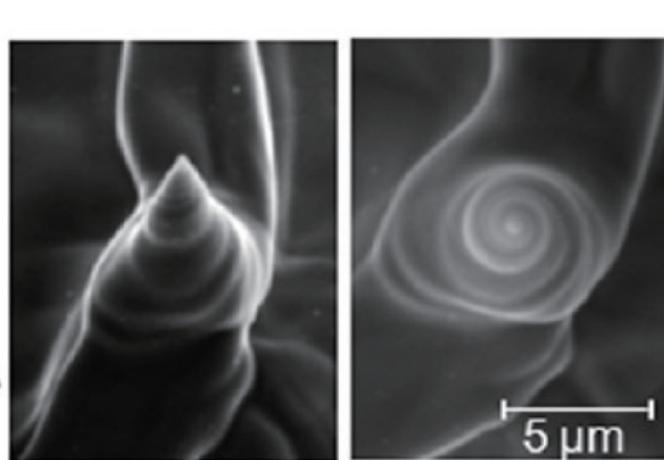

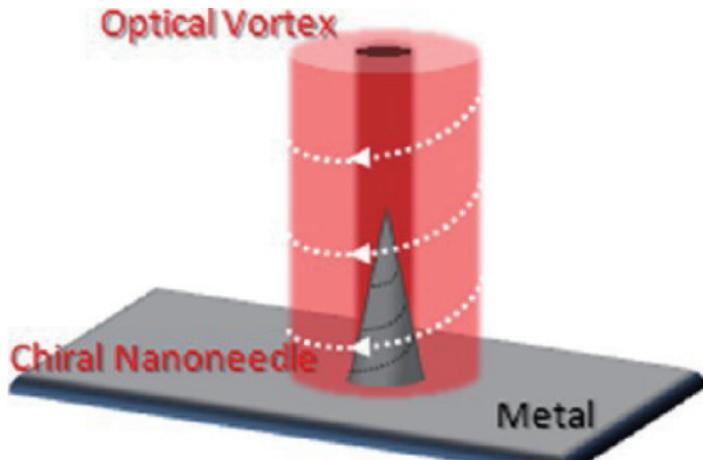

A. T. O'Neil et al., PRL 88 (2002) 053601.

N. B. Simpson et al., Opt. Lett. 22 (1997) 52.

Application of vortex beams

Creation of metal nano needle (tantalum target)

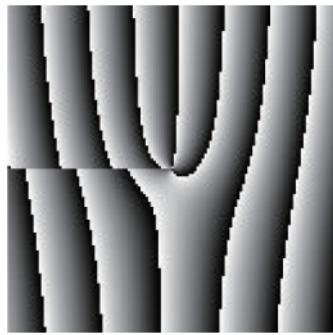

K. Toyoda et al., Nano Lett. 12 (2012) 3645.

Application of vortex beam

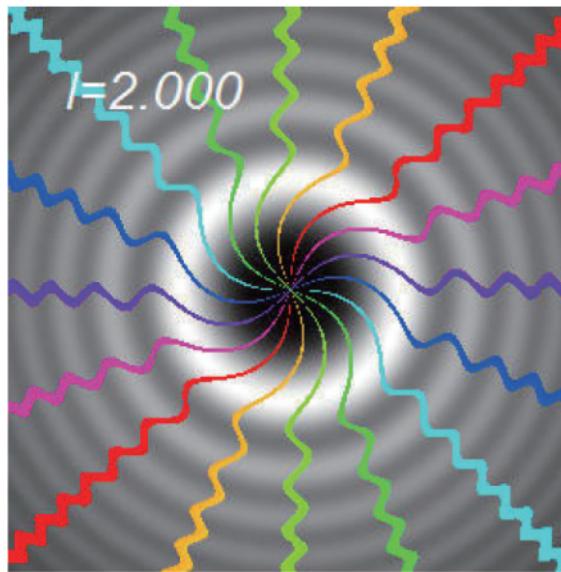

Non-integer OAM

Fork grating

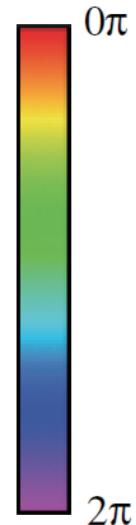

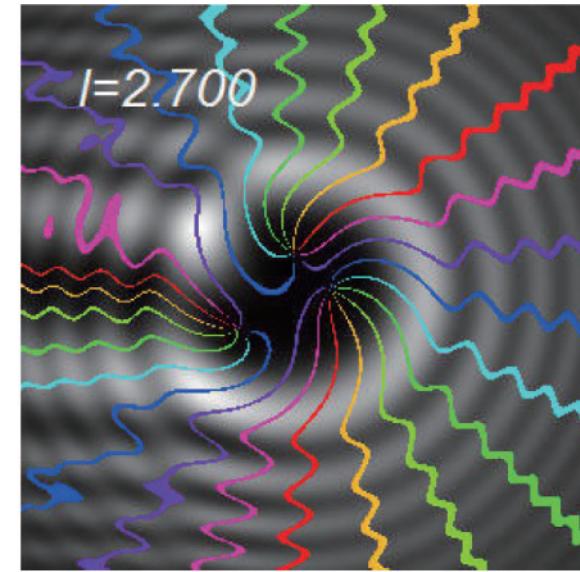

$l=2.7$

Intensity distribution

Phase

J. Leach et al., New J. Phys. 6 (2004) 71.

Other applications of optical vortex

- Quantum entanglement
- Terabit data transmission
- Direct observation of rotating black hole
- Excitation of atom

Outline

■ Polairzation and wave fronts of light

■ Optical vortex

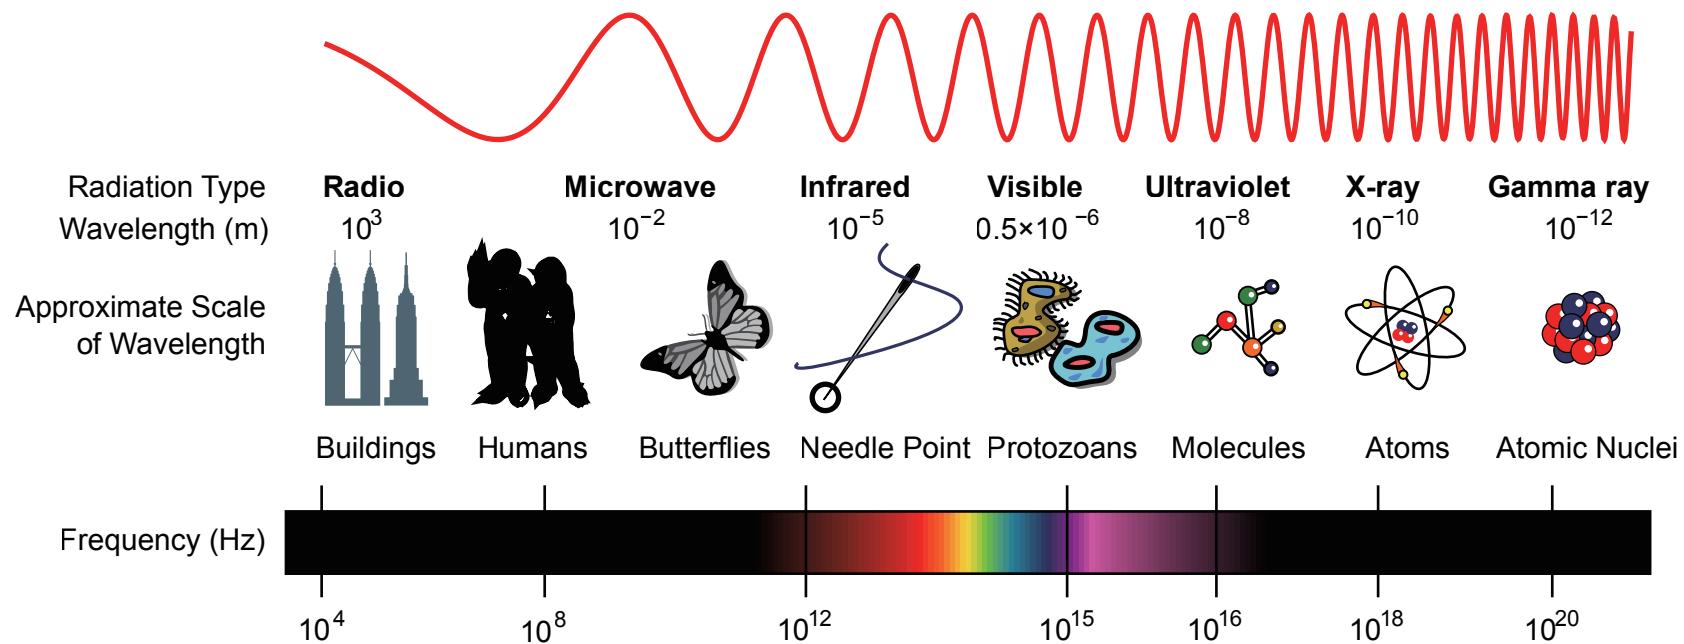

Electric field and Poynting vector

Generation, Measurement, Application

Electron vortex, X-ray vortex

■ Gamma-ray vortex

Vortex beams

Except for the electromagnetic wave

300 kV electron

Cold neutron

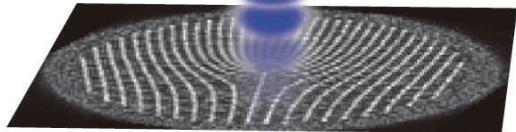

Wikipedia.

Generation of electron vortex

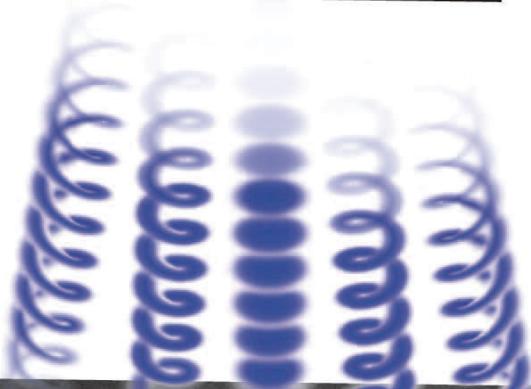

Plane wave electron from electron microscope ($E < 300$ keV)

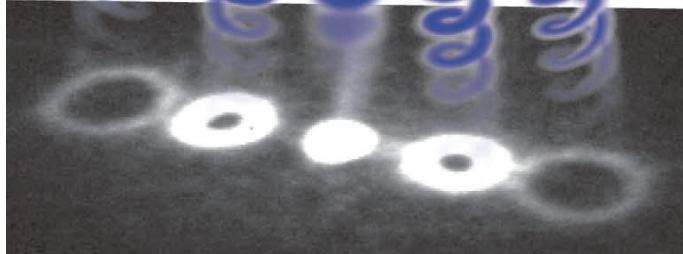

de Broglie wavelength = 2 pm

Fork grating (pitch = 50 nm)

Electron vortices

Application of electron vortices

Magnetic mapping with atomic resolution

at JLab

R&D of twisted electron acceleration at CEBAF injector

Final goal: study of the proton structure (e.g. quark OAM)

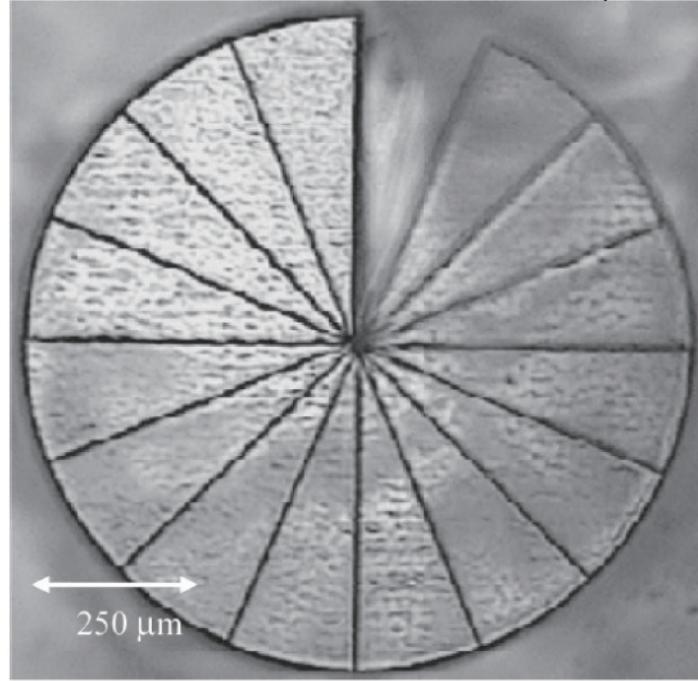

Dipangkar Dutta,
twisted meeting, 1/26/2015

Generation of X-ray vortex (9 keV)

Electron storage ring

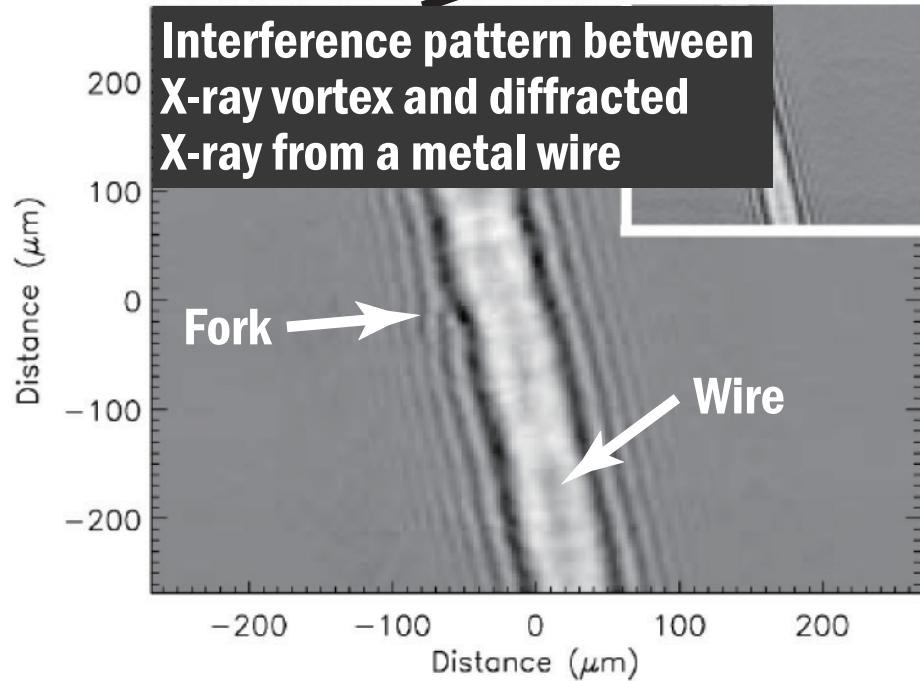

Synchrotron light

Metal wire $\phi 7 \mu\text{m}$

X-ray vortex (9 keV)

Detector

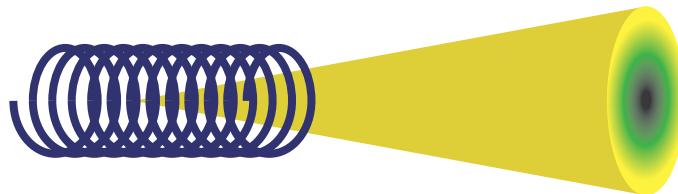

A. G. Peele et al., Opt. Lett. 27 (2002) 1752.

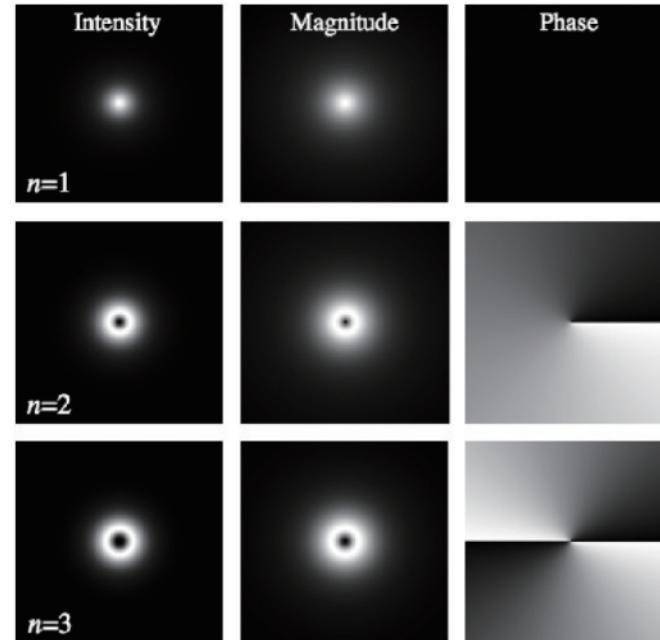

X-ray vortex beams from electrons

X-ray vortex generation using helical undulator was proposed in 2008.

Electron in
helical motion

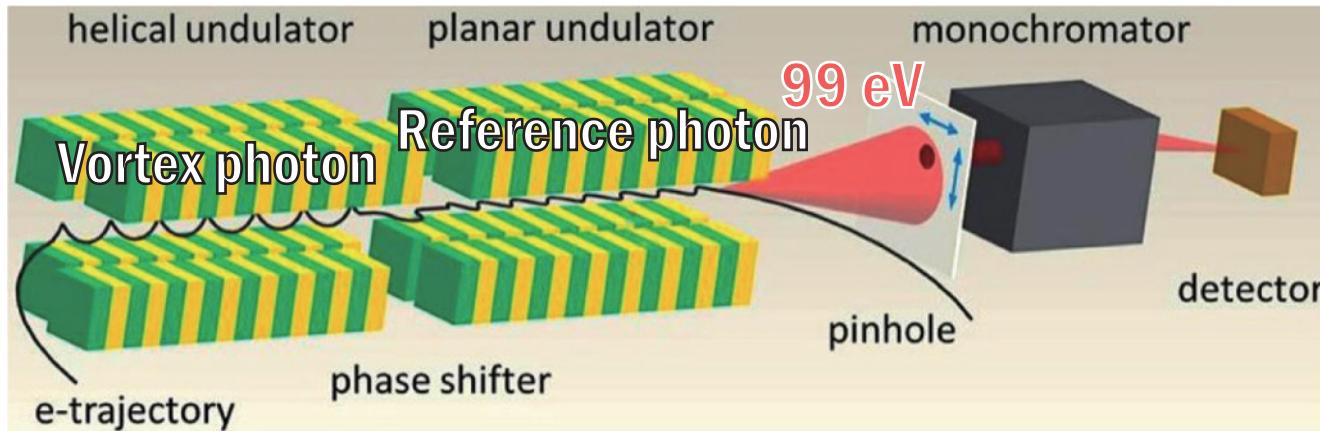

Transverse motion produces
higher harmonics.

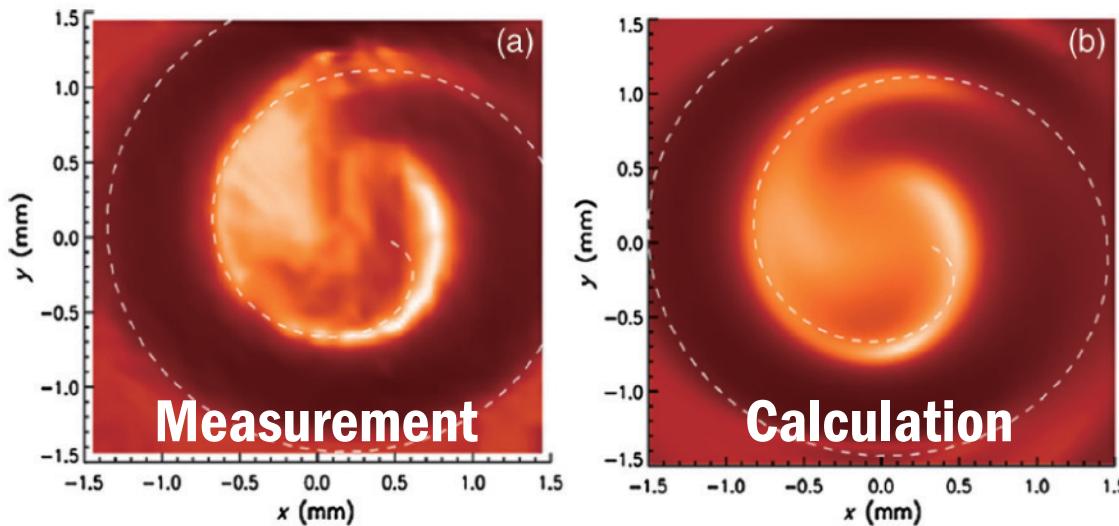

Higher harmonics
carry OAM of $(n-1)\hbar$.

S. Sasaki et al., PRL. 100 124801 (2008).

Soft X-ray (99 eV) generation

Interference pattern between vortex photon and spherical reference photon

J. Bahrdt et al., PRL 111 (2013) 034801.

Outline

■ Polairzation and wave fronts of light

■ Optical vortex

Electric field and Poynting vector

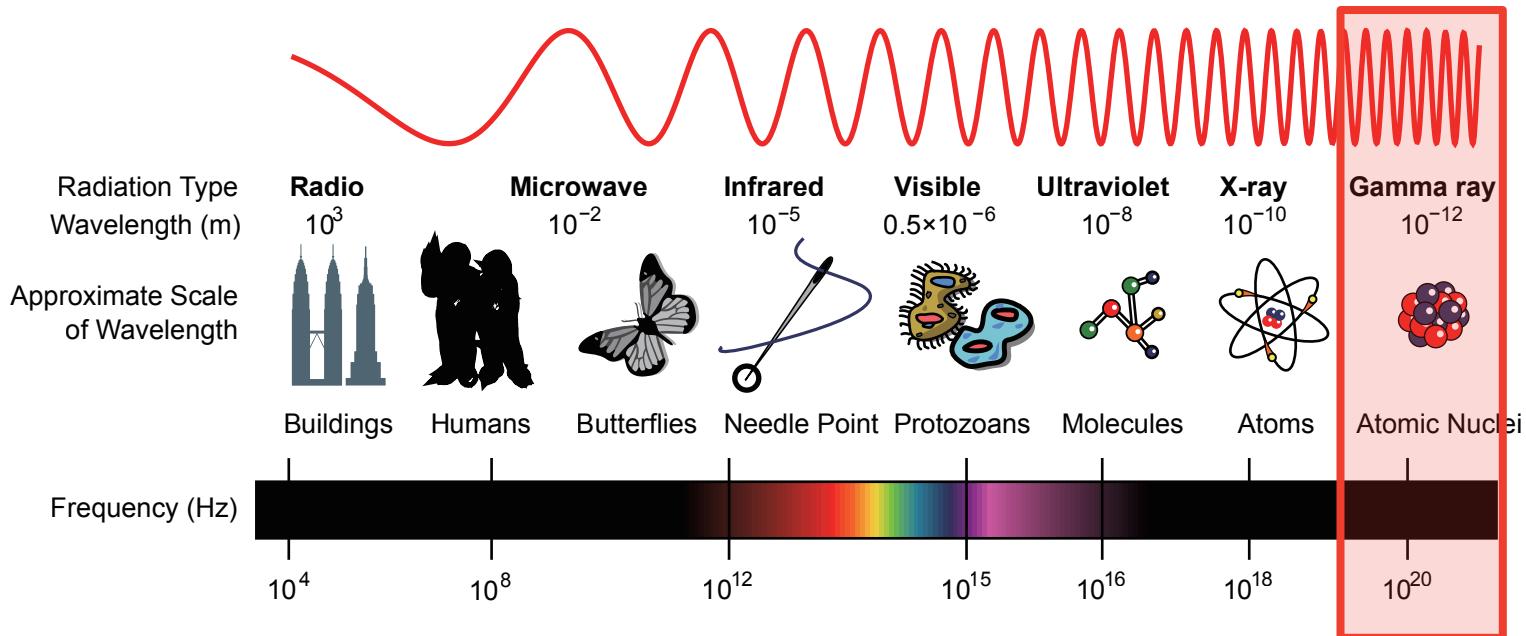

Generation, Measurement, Application

Electron vortex, X-ray vortex

■ Gamma-ray vortex

My interest -Gamma-ray vortex generation-

Generation of gamma ray vortex (> MeV)
and development its application.

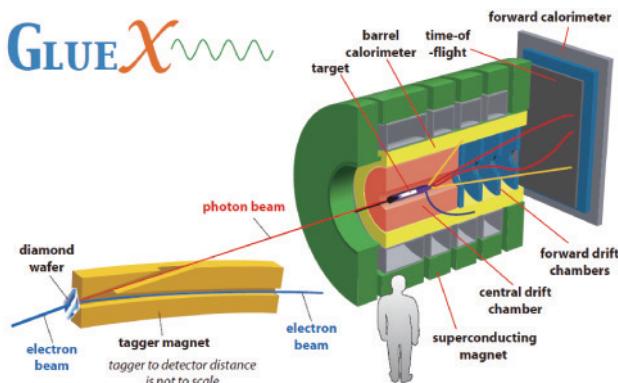

Gamma-ray

Applications of gamma-rays

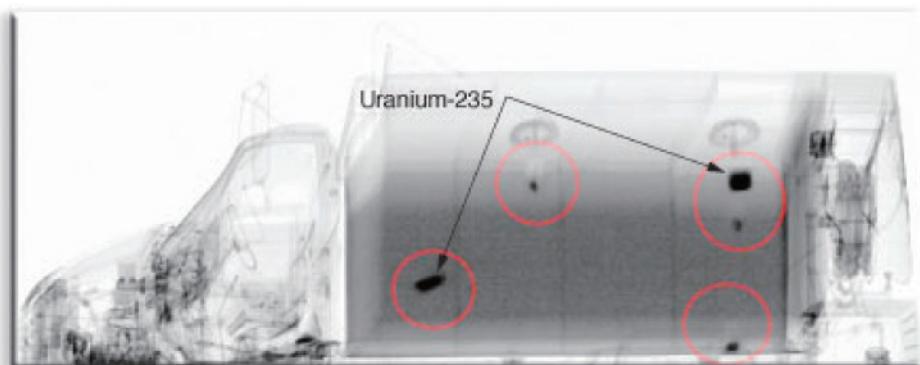

Nuclear physics

GLUE χ

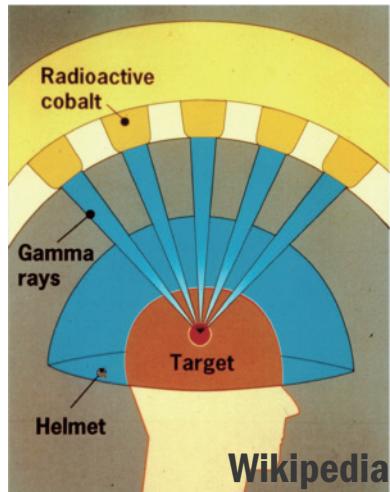

arXiv 1210.4508 (2012).

Homeland security

Cancer therapy

Positron production for a linear collider

Non-destructive inspection

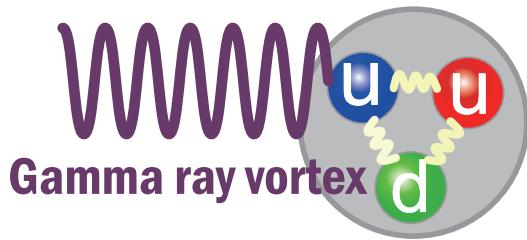

Astrophysics (gamma-ray burst)

Solid state physics (magnetic Compton scattering)

Possible applications of gamma-ray vortex

Insight into the proton structure

I. P. Ivanov, Phys. Rev. D 83 (2011) 093001.

If the OAM of gamma ray is transferred to the quark/gluon, it becomes novel probe of the proton spin.

Nuclear physics

Y. Taira et al., arXiv 1608 (2016) 04894.

Excited states can be populated by high order transition.
Photon-induced reaction cross section will be changed.

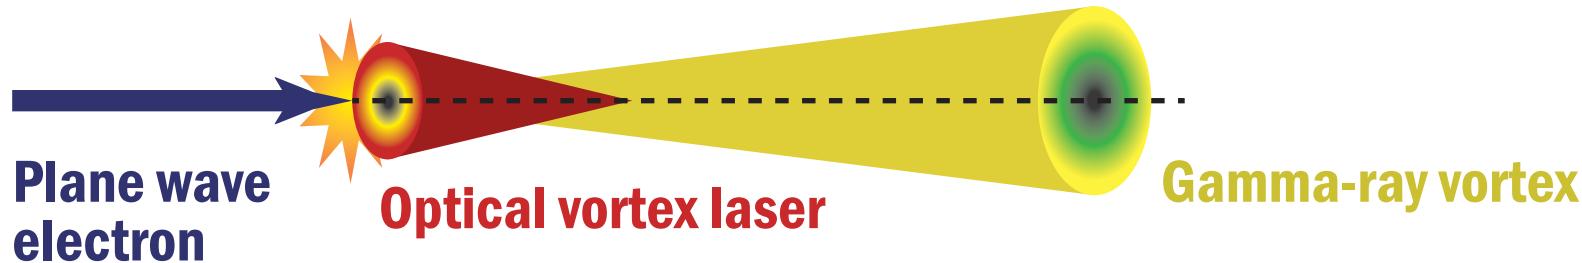

Generation of positron vortex via pair production

As a new particle source for high energy physics.

How to generate gamma-ray vortices?

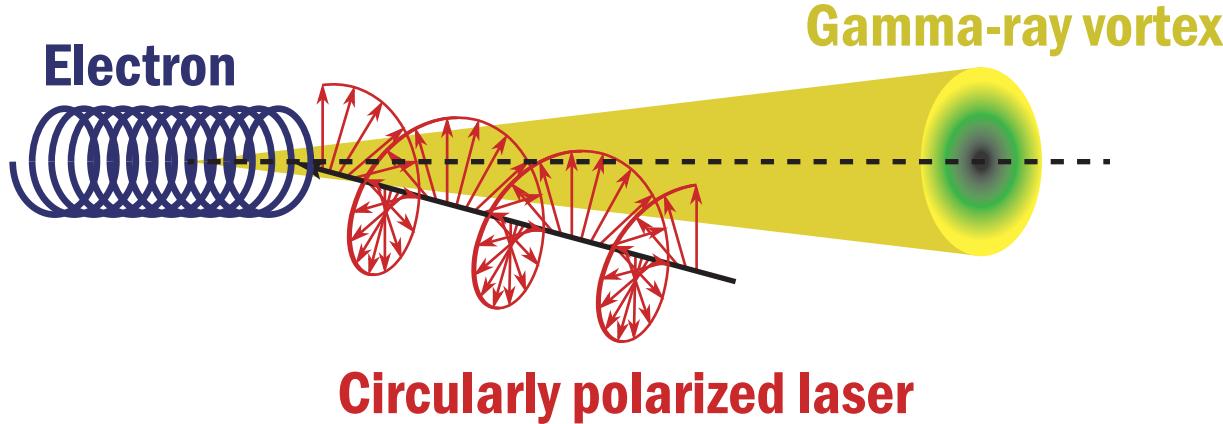

1

Inverse Compton scattering (ICS) of an optical vortex laser by a relativistic electron

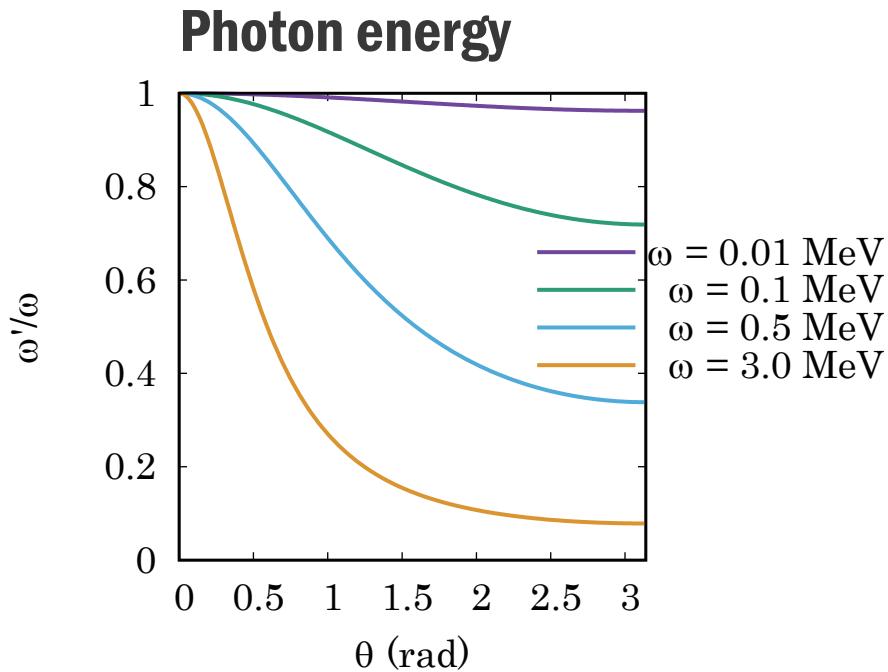

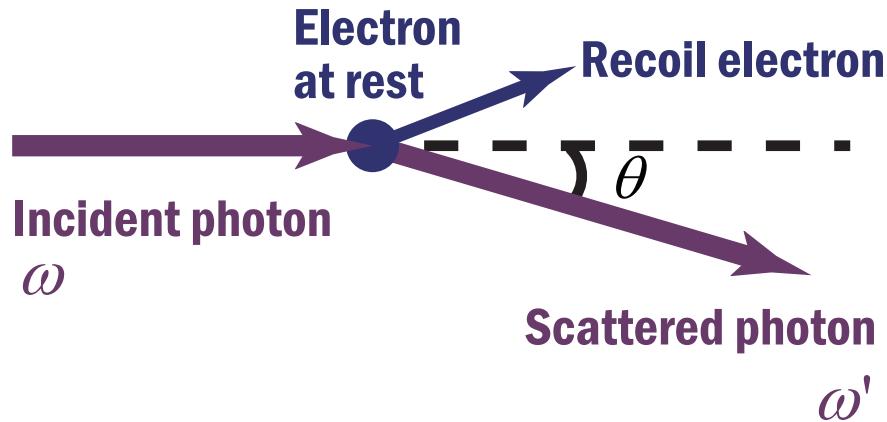

2

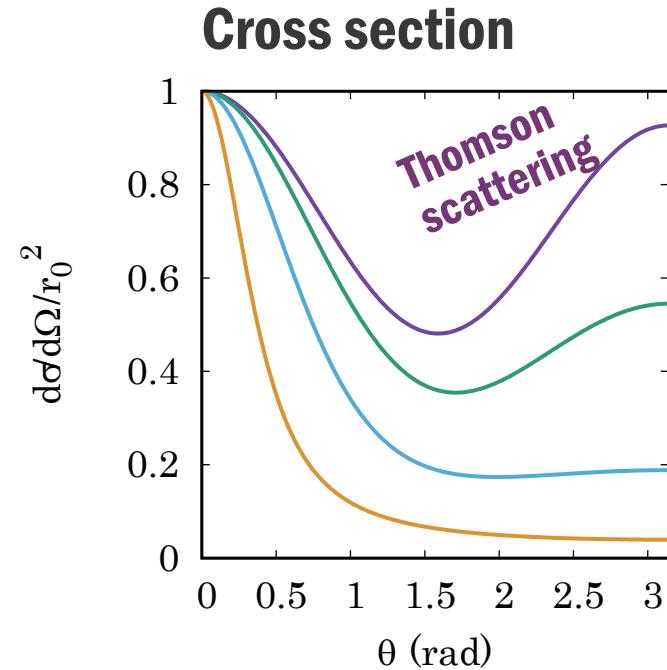

Nonlinear ICS of intense circularly polarized laser (not vortex laser)

Compton scattering

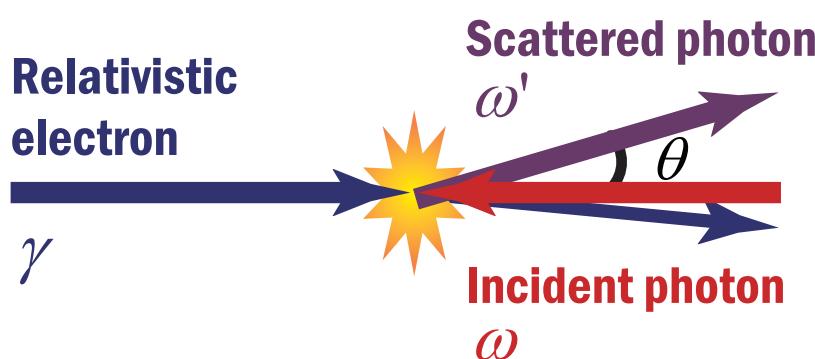

$$\omega' = \frac{\omega}{1 + \frac{\omega}{m_e c^2} (1 - \cos \theta)}$$
$$\frac{d\sigma}{d\Omega} = \frac{r_0^2}{2} \left(\frac{\omega'}{\omega} \right)^2 \left(\frac{\omega'}{\omega} + \frac{\omega}{\omega'} - \sin^2 \theta \right)$$

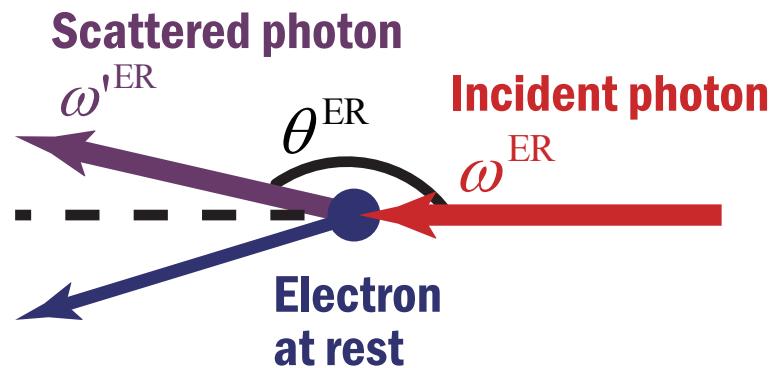

Inverse Compton scattering (ICS)

Laboratory frame

Electron rest frame

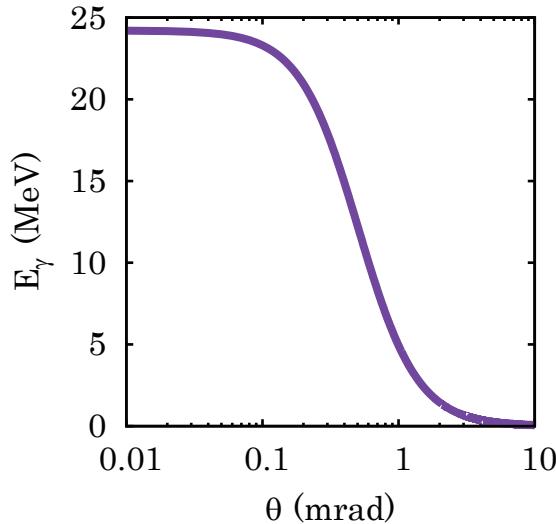

ICS can be derived by the Lorentz transformation
of the Compton scattering.

$$\omega^{\text{ER}} = \gamma(1 + \beta)\omega = 6.2 \text{ keV} < m_e c^2 = 511 \text{ keV} \quad \text{Thomson scattering}$$

when $\gamma = 2000$ and $\omega = 1.5 \text{ eV}$

Energy and spatial distribution

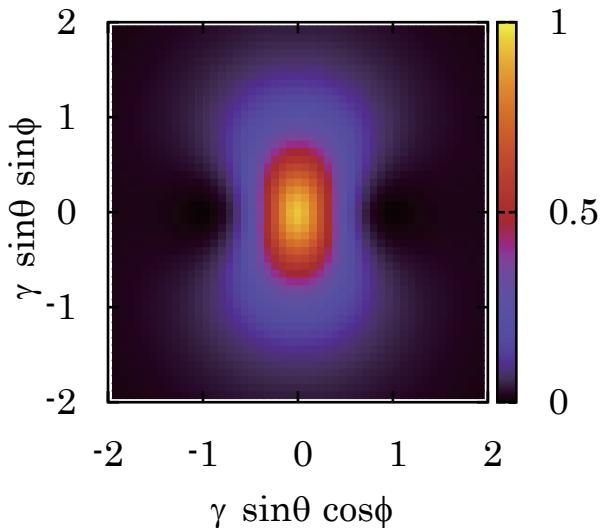

$$E_\gamma = \frac{4\gamma^2 \hbar \omega}{\gamma^2 \theta^2 + 1}$$

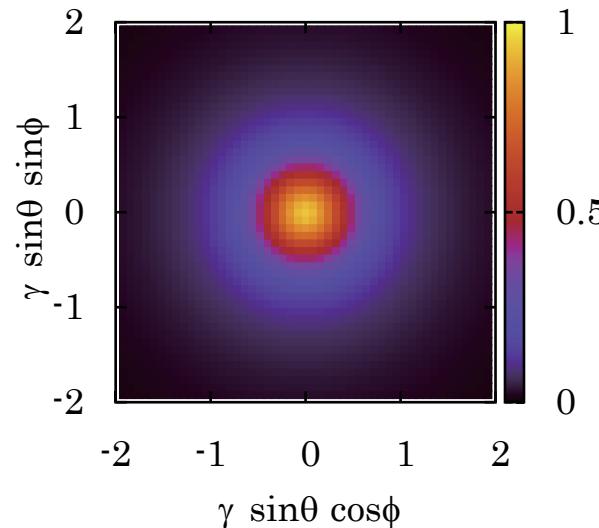

$$\gamma = 2000$$

$$\omega = 1.55 \text{ eV} (\lambda = 800 \text{ nm})$$

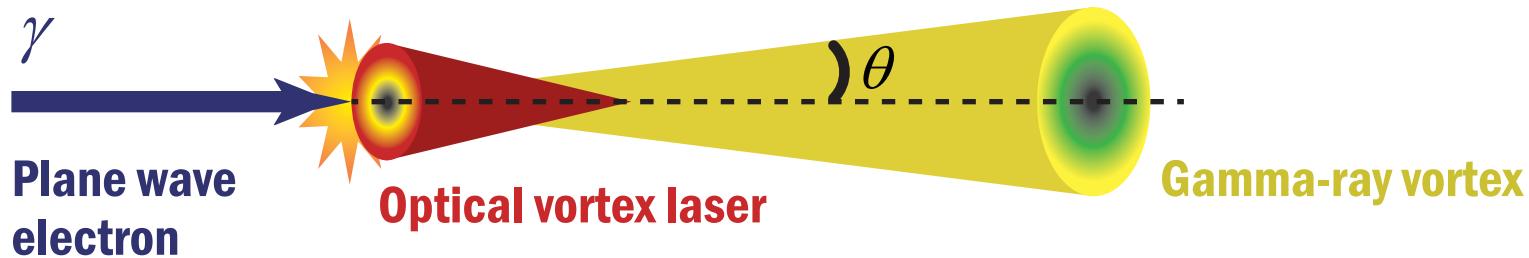

Linear polarization

Circular polarization

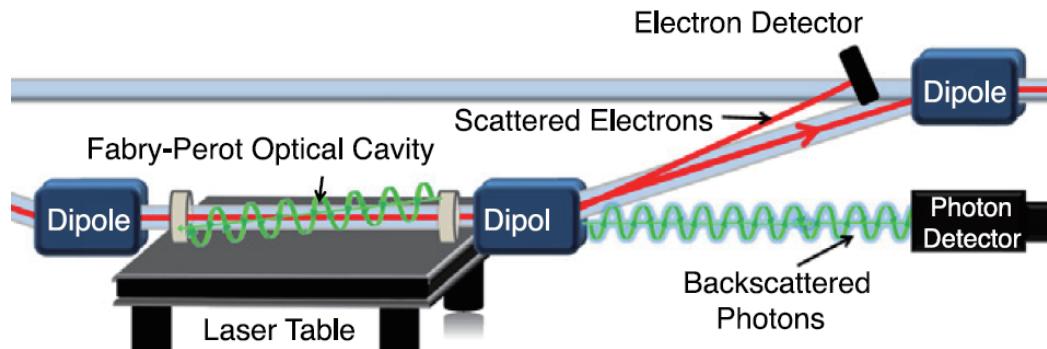

1. ICS of an optical vortex laser

It was predicted that OAM of the gamma-ray preserved the OAM of the laser at the very small angle $\theta < 1/\gamma^2$.

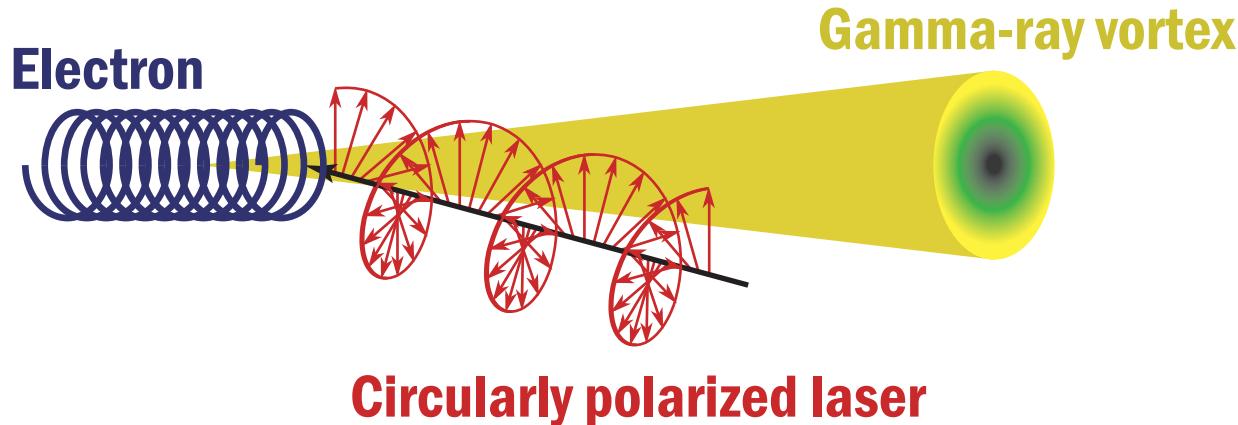

U. D. Jentchura et al., PRL 106 (2011) 013001.

Experimental demonstration using JLab Compton polarimeter

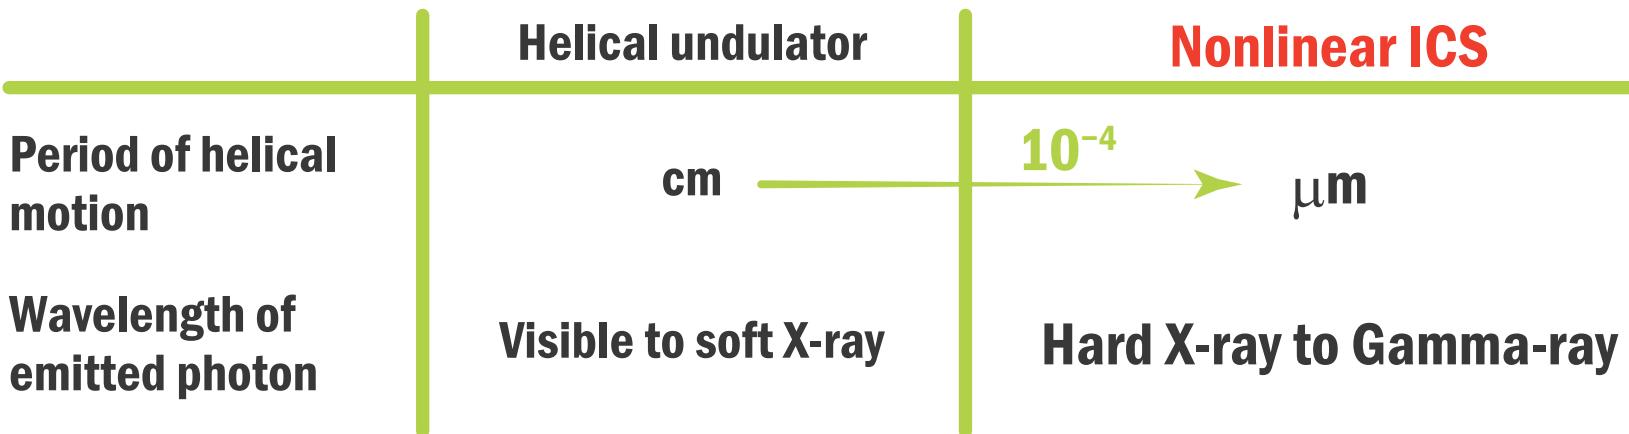

2. Nonlinear ICS

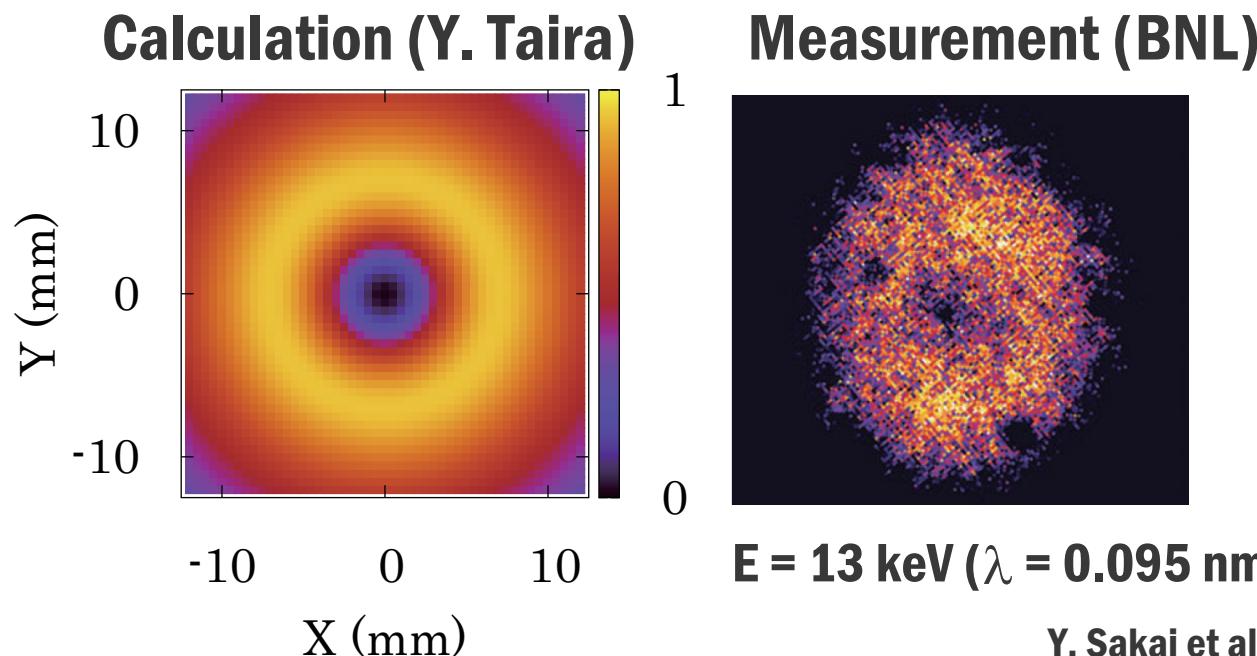

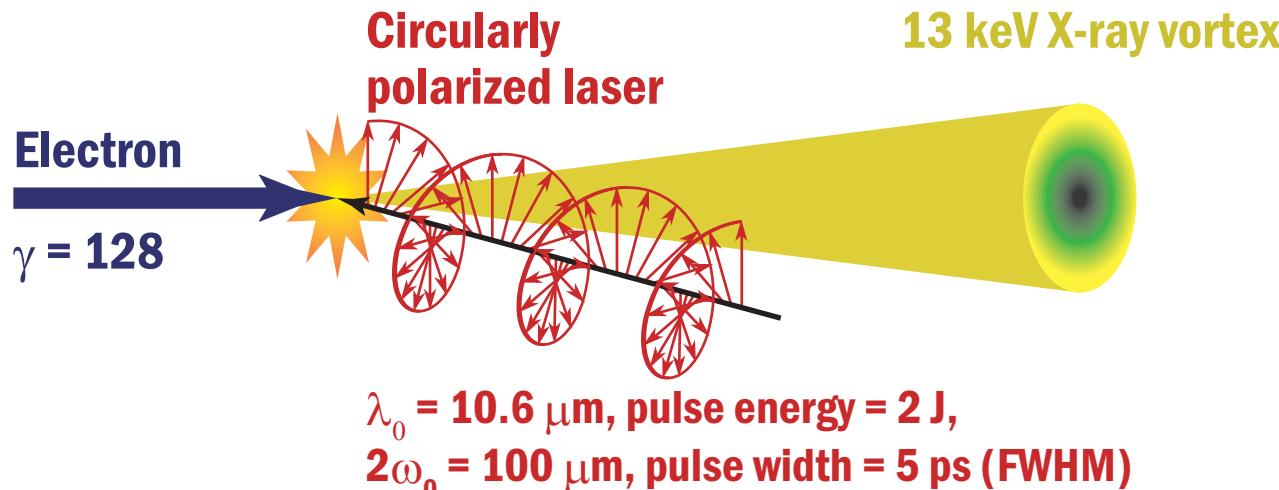

Nonlinear effect of the laser (a laser strength parameter, $a_0 \approx 1$) induces helical motion of the electron.

Scaling of the emitted wavelength

Second harmonic X-rays at BNL ($a_0=0.6$)

This will be the
X-ray vortex.
