Bubble Chamber

Installation and Beam Test Schedule

https://wiki.jlab.org/ciswiki/index.php/Bubble_Chamber

Beam Test Schedule

• Summer 2014 SAD:

- I. Fast Valve after ¼ Cryounit
- II. New MBV0L02 Dipole Magnet
- III. Install Bubble Chamber for Test Run
- Safety

SCHEDULE

Now – May 2, 2104	5.5-pass to Hall D	
May 3 – September 18, 2014	Summer Shutdown, CHL@4K	1 st Opportunity in October 2 nd Opportunity in January
September 19 – December 22, 2014	2.2GeV/pass	
December 23, 2014 – February 5, 2015	Winter Shutdown, CHL@2K	
February 6, 2015 – June 12, 2015	Hall A Physics, Hall D Eng. Run	
June 13, 2015 – September 10, 2015	Summer Shutdown, CHL@2K (?)	
	For helium processing of Cryo-modules	3 rd Opportunity in Summer

1. Fast Valve after ¼ Cryounit:

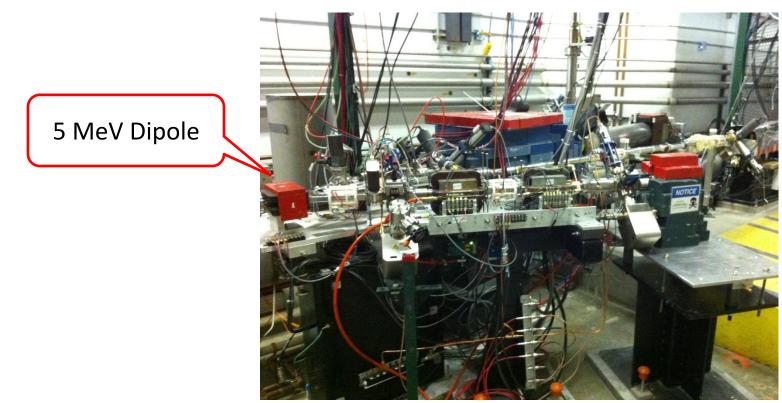

- 1. Heckman: ordered fast valve
- 2. Kortze: to order controller electronics, complete installation
- 3. Install Group: to move DP station after cryounit to make room for valve
- 4. Survey/Alignment: to check DP station
- 5. MPS: to integrate fast valve in FSD
- 6. Trigger gauge to be installed in 5D line

New Fast Valve to protect from vacuum failure in front of ¼ Cryo-unit

2. New MBV0L02 Dipole Magnet

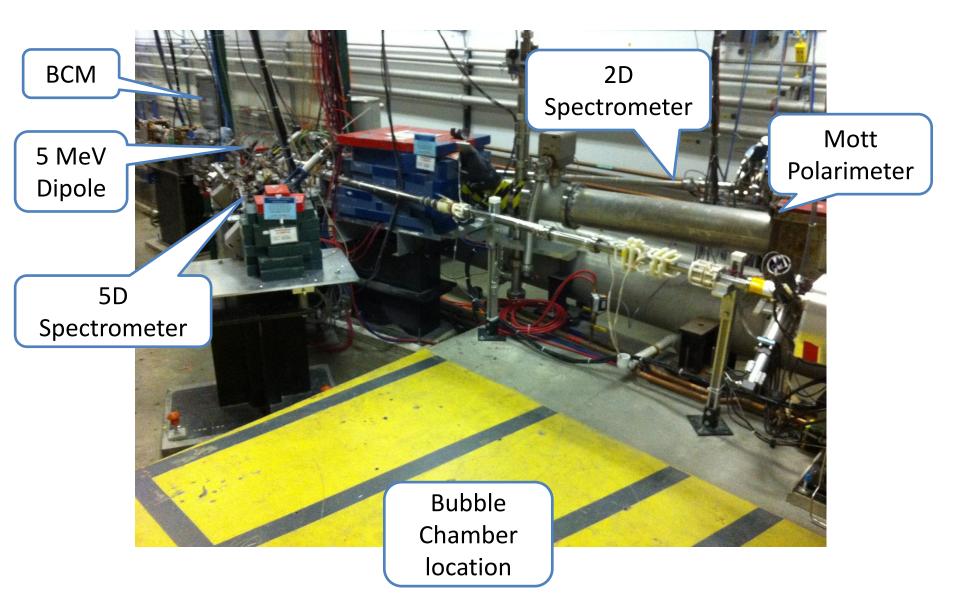

- 1. Benesch/Mechanical Engineering (ME): to complete design, find vendor, get quotes, place order
- 2. Suleiman: to order Hall Probe system
- 3. Controls: Hall Probe communication
- 4. Magnet mapping
- 5. Survey/Alignment
- 6. Power Supply: 10 A Trim Card

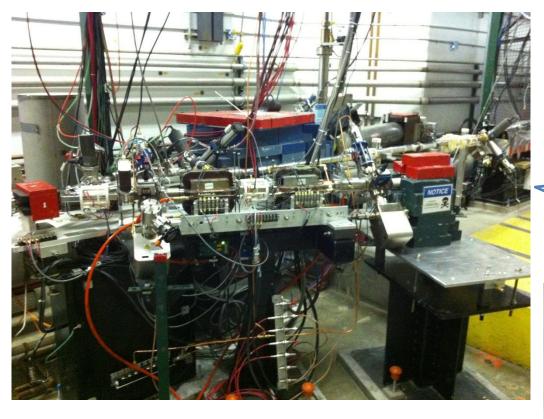

3. Install Bubble Chamber for Test Run

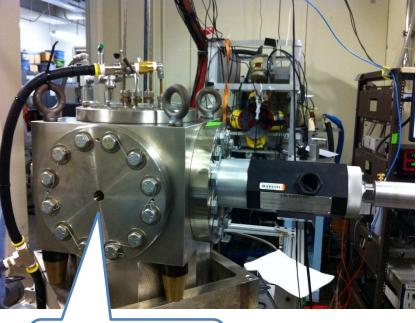

- 1. Suleiman/ME: to complete design modifications for 5D line and bubble footprint
- 2. EGG: to do vacuum work
- 3. Install Group: to crane bubble chamber and hardware to tunnel
- 4. Survey/Alignment: to set points for bubble chamber, support alignment
- 5. Bubble Chamber Chiller will be derived from the same outlet as Compressor No need for another power outlet.
- EGG: to include "No Beam" signal from Bubble chamber in laser Shutter. Beam will be ON/OFF at a frequency of about 1 Hz. Need a beam test to study effect on ¼ Cryounit stability.
- 7. Suleiman/ME: design cupper for Flange radiator/dump
- 8. ME: Thermal analysis of Flange radiator/dump
- 9. Suleiman/ME: design and build Photon Collimator and Photon Dump
- 10. New beamline Components: (1) Corrector (2) Superharps

> Need to have an installation plan, pre-review by late April

Bubble Chamber at HIGS April 2013

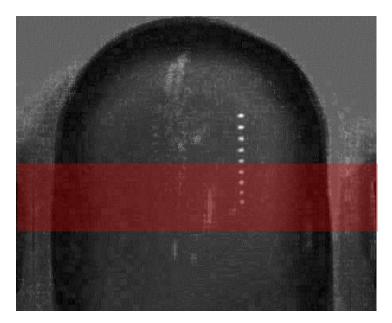

Photon Beam Entrance

N_2O Bubble Chamber T = -5°C P = 60 atm

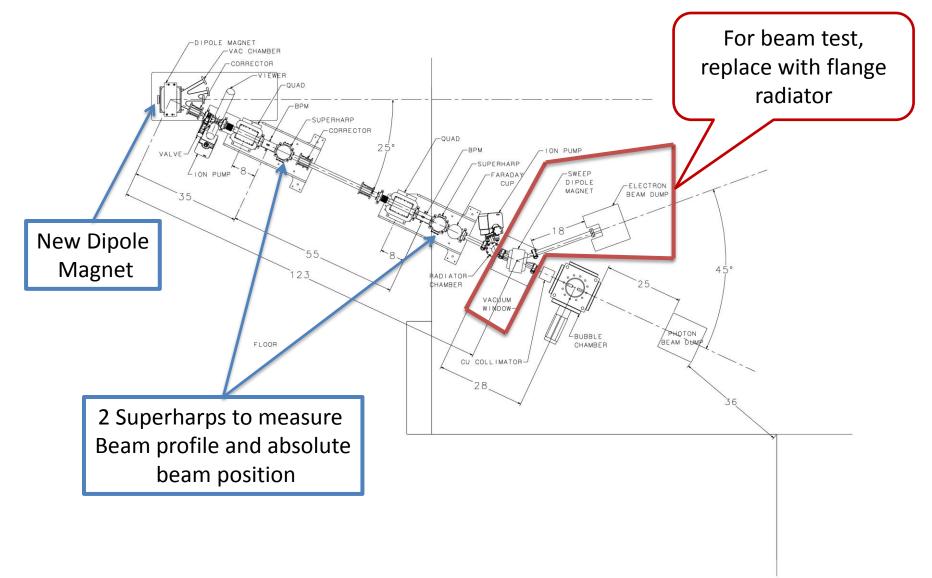

First γ +O $\rightarrow \alpha$ +C bubble April 2013

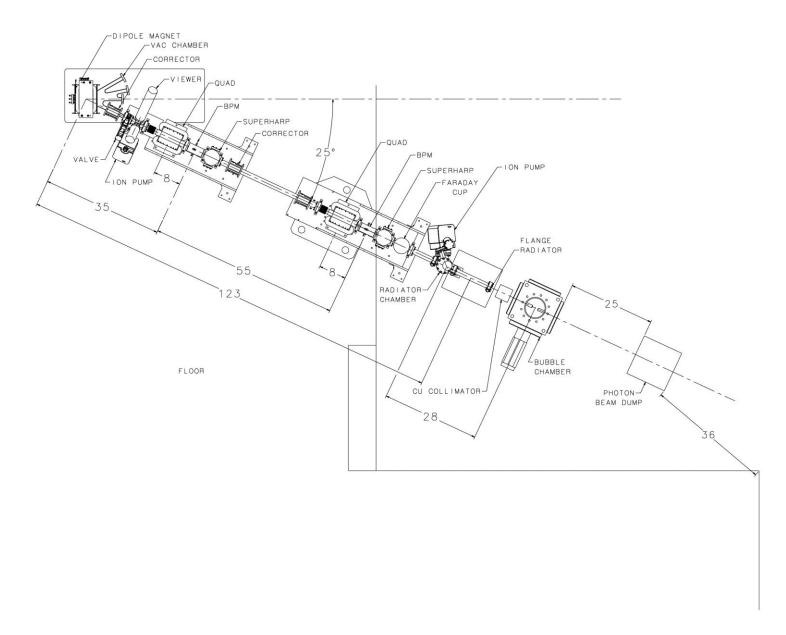

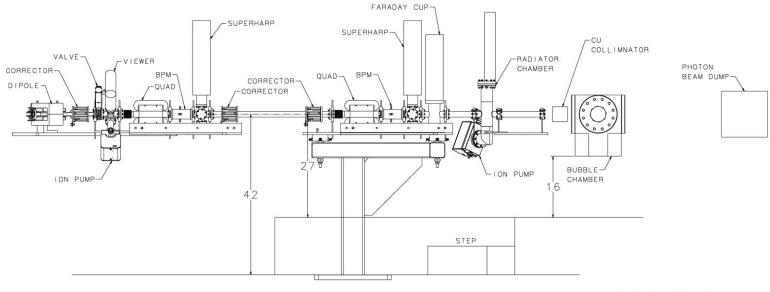

BEAMLINE

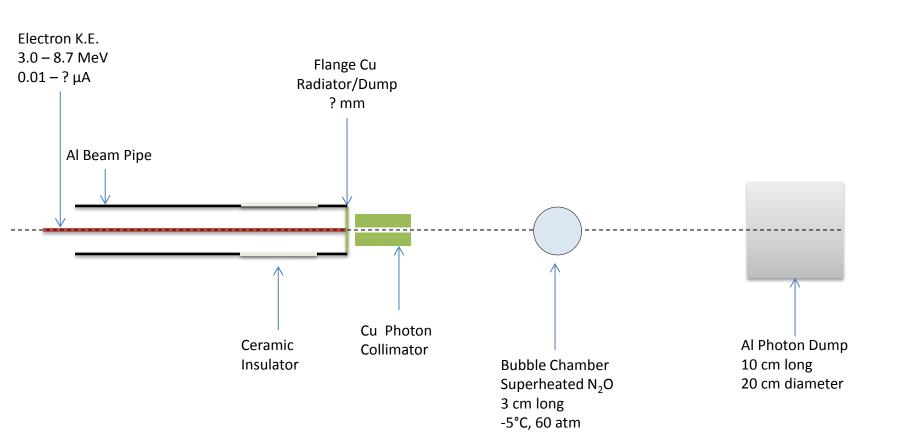

.

UNITS ARE IN INCHES

SCHEMATICS

- Use pure Copper and Aluminum
- Flange isolated and current in EPICS readback

BEAM REQUIREMENTS

I. Beam Properties at Radiator:

Beam Kinetic Energy, (MeV)	7.9–8.7
Beam Current (µA)	0.01-?
Absolute Beam Energy Uncertainty	<0.1%
Relative Beam Energy Uncertainty	<0.02%
Energy Resolution (Spread), σ_T/T	<0.06%
Beam Size, σ _{x,y} (mm)	1–2

- II. February 16, 2014: With one trip/hour (all are 0L02-8 ARC trips) GMeas are: 0L02-7 = 10.22 MV/m and 0L02-8 = 10.40 MV/m. Beam Kinetic Energy = 8.7 MeV
- III. We may also need to helium process the ¼-cryounit

SAFETY

Superheated liquid: N₂O, Nitrous oxide (laughing gas)

I. At room temperature, it is colorless, non-flammable gas, with slightly sweet odor and taste

> High pressure system:

- I. Design Authority: Dave Meekins
- II. T = -5°C
- III. P = 60 atm
- Buffer liquid: Mercury
 - I. Closed system
 - II. Volume: 135 mL
