Detector Energy Resolution – Energy Spread Corrected

- Energy Resolution = (mean / std dev) * 100 (%) of energy spectra
- Corrected for energy spread by fitting detector pedestal – events in a detector when no Mott events in that detector – with a gaussian
- Taking sigma from pedestal fit, corrected E-spectra sigma and recomputed energy resolution

$$\text{sigma_E_corr} = \text{Sqrt} (\text{Sigma_E_uncorr}^2 - \text{Sigma_Ped}^2)$$

Detector Energy Resolution – Energy Spread Corrected

				Left	Detector	Right	Detector	Up	Detector	Down	Detector
