Richard Trotta

pi_n_10on135_x0.001-1.000_q1.0-1000.0

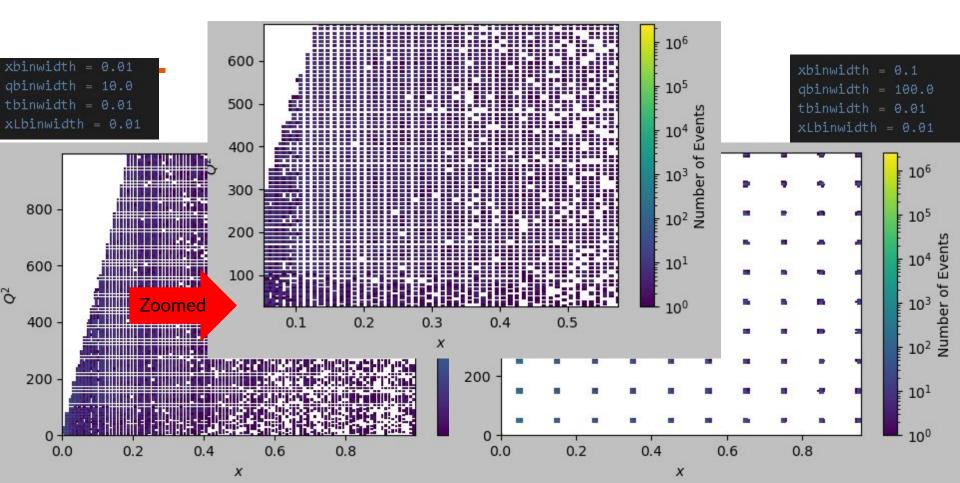

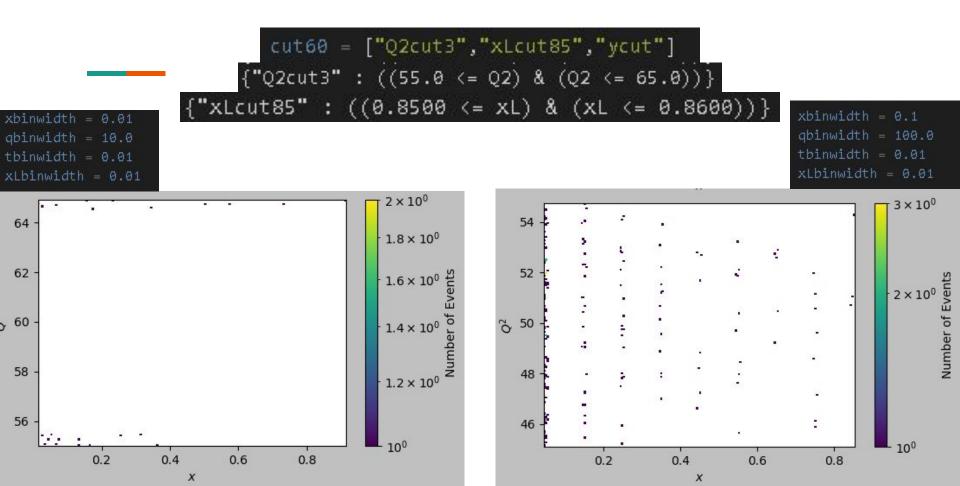

xbinwidth = 0.1

tbinwidth = 0.01

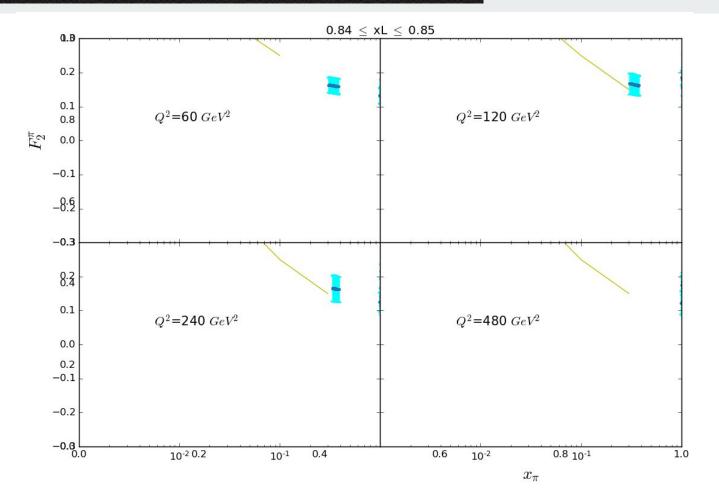

xLbinwidth = 0.01

pi_n_10on135_x0.001-1.000_q1.0-1000.0

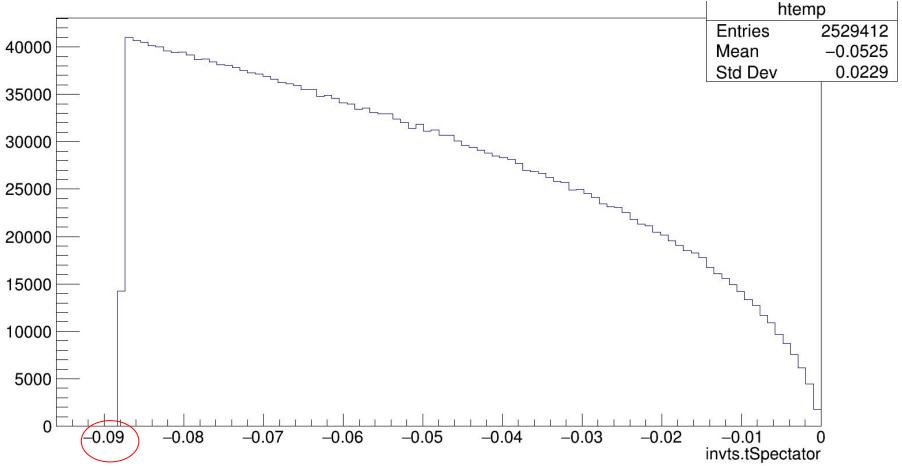

pi_n_10on135_x0.001-1.000_q1.0-1000.0

xbinwidth = 0.1 qbinwidth = 100.0 tbinwidth = 0.01 xLbinwidth = 0.01

Found one big issue...this odd cut at t

My t is calculated by the following equation...

$$t = (P_{pr} - P_n)^2 = M_{pr}^2 + M_n^2 - 2P_n \cdot P_{pr}$$

where $P {\it pr}$ is the incident proton (i.e. proton beam)

and the LN is defined by the following....

$$\begin{split} P_n &= P_{n,rest}.Boosted() \\ \overrightarrow{P}_{n,rest} &= pS_{rest}sin(acos(cos(\theta_{recoil})))[cos(\phi_{recoil})\widehat{x} + sin(\phi_{recoil})\widehat{y}] + pS_{rest}cos(\theta_{recoil})\widehat{z} \\ pS_{rest} &= pS_{max}(uw)^{1/3} // \text{ uniform in } 3p^{A2} \text{ dp} = d(p^{A3}), \text{ pSMax=0.3, } uw = \text{ ran3.Uniform}(x) \\ cos(\theta_{recoil}) &= 2ux - 1 // \text{ ux} = \text{ ran3.Uniform}(x) \\ \phi_{recoil} &= \pi(2uy - 1) // \text{ uy} = \text{ ran3.Uniform}(x) \end{split}$$
