# CPS4KLF: Design Modifications and Future Plans

**Sean Dobbs** Florida State U.

> CPS Collaboration Meeting February 4th, 2020

#### Introduction

- KLF in Hall D requires an intense photon beam to generate the tertiary K<sub>L</sub> beam
  - The CPS concept fits this requirement well
- Some modifications will be needed to the base CPS design
  - Fewer physical restrictions in Hall D Tagger Hall
    - Operation must not affect other Hall equipment
  - Higher average beam power
  - Photon beam must travel longer distance

### Hall D Complex

#### **KLF Electron & Photon Beam Requirements**

- KLF Electron Beam parameters:
  - 12 GeV e<sup>-</sup> @ 5 uA  $\rightarrow$  60kW power (x2 CPS)
  - Low repetition rate for  $K_L$  TOF: 64 ns bunch spacing
  - Raster: 1 x 1 mm, 2 x 2 mm, 5 x 5 mm?
  - Further coordination with APEL
- Distance from CPS radiator to Be target: around 55 m
  - Beampipe radius: 12.4 cm
  - Be target radius: 3 cm
  - Target radius (extra 20 m d.s.): 3 cm

## Hall D: Tagger Hall

# **Suggested Modifications**

- Keep similar inner design
  - 10% R.L. Cu radiator+Magnet+W/Cu insert+Cu absorber
  - $2x \text{ power} \rightarrow 2x \text{ longer magnet}$ 
    - Larger raster reduces required magnet length
- Replace outer tungsten shielding with lead
  - Length increases to roughly 6m
  - Optimize size & composition to reduce weight
- Optimize collimation/exit opening for desired beam properties
- Use existing 60 kW dump cooling

## **Simulation Plans**

- Optimize electron beam raster + collimation
- Confirm power density deposition
- Optimize radiation shielding, measuring radiation levels at:
  - Tagger Hall walls, ceiling, floor
  - 1ft envelope around CPS
  - Tagger hodoscope plane
  - Eventually:
    - Tagger ramp door
    - Site boundary

# Hall D: Tagger Hall

# Summary

- CPS concept provides ideal photon source for KLF
  - Simple modifications to handle double the beam power with looser physical constraints
  - Must keep beam on GlueX target over long distance
- Next steps are simulations to optimize design
  - Photon beam properties
  - Shielding

•

- Iterate beam simulations with target geometries
- Longer term thoughts:
  - Stability with respect to mechanical changes
