U.S. Department of Energy

INTER-ENTITY WORK ORDER

1. Work Order Number: **M1WJSA15F029615B4** **Amendment Number:** 1st Mod of the FY 2015	**2. Month/Year to be recorded:** **(For Use in DOE –DOE Work Only)** January/2015
Authorizer	
3. Authorizing Contractor: DOE/ORO	
4. Authorizing Contractor OPI Code: OR90	**5. Allotment Symbol:** 30
6. Certifying Official: Richard E. Riley Jr.	
Telephone: (865) 241-2059	
E-Mail: Richard.Riley@Science .doe.gov	
7. Authorizer's Cognizant Contracting Officer Signature: (Required for actions >$1M) or IEWO Point of Contact if <$1M Richard E. Riley Jr. **Date:** 1/30/15	
8. Scope of Work (attach additional sheets if needed):	
See Attachment	
9. Period of Performance: thru 9/30/2016	
10. Billing Information: Address: CID M1WJSA15F029615B4 OPI OR90 AFF: 00500.2015.30.471999.61000000.25104.2923724.0000000.0000000.0000000 United States Department of Energy Post Office Box 2001, Oak Ridge, TN 37831-8783 Attention: Order Number: M1WJSA15F029615B4	

Authority	Current Year	Cumulative
Previous Total	$ 0.00	$ 0.00
Current Action	$ 60,122.00	$ 60,122.00
Revised Total	$ 60,122.00	$ 60,122.00

Performer	
11. Performing Contractor: Savannah River Nuclear Solutions	
12. Performing Contractor OPI Code: SRD0	**13. Allotment Symbol:** 36
14. Cognizant Contracting Officer: Matthew Biasiny	
Telephone **(803) 952-8648**	
E-Mail **Matthew.Biasiny@srs.gov**	
15. Performer's Cognizant Contracting Officer Signature: Matthew J. Biasiny **Date:** 2/5/2015	

THOMAS JEFFERSON NATIONAL ACCELERATOR FACILITY (TJNAF)
INTER-ENTITY WORK ORDER (IWO)
REFERENCE NUMBER: JSA 15-F0296

I. GENERAL CONDITIONS

A. This Inter-Entity Work (IWO) Order is issued by Jefferson Science Associates (JSA) a DOE site/facility management contractor (under prime contract #DE-AC05-06OR23177) to Savannah River Site, a DOE site/facility management contractor under DOE Contract (DE-DE-AC09-08SR22470) hereinafter referred to as "Performing Contractor". **THIS DOCUMENT IS NOT A SUBCONTRACT BUT AN IWO ISSUED BETWEEN DOE SITE/FACILITY MANAGEMENT COST TYPE CONTRACTORS.**

B. The completion date of this IWO is two (2) years from effective date unless extended by JSA Subcontracting Officer. JSA may terminate work under this IWO in whole, or in part, at any time by written notice to Performing Contractor. If such work is terminated, Performing Contractor shall be paid for expenditures incurred. If at any time Performing Contractor becomes aware of any circumstances which may jeopardize performance hereunder, Performing Contractor shall immediately notify the JSA/Jefferson Lab Subcontracting Officer, named below.

C. The total amount of JSA's obligation under this IWO shall not exceed $79,910.00, Account Numbers TRITAG.TARGET.46-024. This obligation ceiling shall not be exceeded without the written authorization from the JSA Subcontracting Officer named below.

D. Costs shall be accrued in accordance with Performing Contractor's DOE prime contract and invoiced monthly to:

Jefferson Science Associates, LLC
628 Hofstadter Road, Suite 4,
Attention: Accounts Payable,
Newport News, VA 23606.

The terms of the invoice shall be net 30 days. At a minimum, the invoices shall contain the IWO identifier number referenced above, Description of the Services/Products provided including the Hours invoiced (if appropriate), Amount, Dates of Services and any other pertinent information.

II. SCOPE OF WORK

The following is a Statement of Work (SOW) and Cost Estimate requested for FY15 and FY16 activities to be led and/or performed by SRNL (Savannah River National Laboratory) and TP (Tritium Programs), also collectively called SRTE (Savannah River Tritium Enterprise) at SRS (Savannah River Site), in collaboration with and in support of TJNAF (Thomas Jefferson National Accelerator Facility). The funding mechanism is an IWO from TJNAF with a period-of-performance (POP) Date of Execution through 09/30/2016.

TJNAF will use a tritium filled target in a fundamental physics experiment. The aluminum alloy target has not previously been used in tritium service. TJNAF is interested in understanding the safe application and handling of the target before, during and after their experiment. SRTE will design and implement a program to expose alloy samples to relevant conditions, test specified properties and evaluate results to assist TJNAF with this understanding.

The experiment (beam time) is expected to occur October 2015 – December 2015 and January 2016 – June 2016. SRTE will need to have some samples exposed to tritium about 4-6 months before beam time in order to produce potentially relevant information. The following activities will be performed by SRTE:

1) Task Technical Plan and Task Quality Assurance Plan
2) Understanding Beam Conditions; Material Properties
3) Identifying Relevant Experiment Parameters and Property Tests
4) Design of Experiment
5) Loading/Storing Samples with Tritium
6) Performing Property Tests
7) Evaluation and Reporting
8) Disposal of Samples/Materials

Relevant scope/activity detail is provided throughout this document. The Principal Investigators (PI) are also listed. High resolution details for each activity will be provided in the Task Technical Plan (TTP). Approved additions, deletions and modifications will be documented in subsequent revisions.

Activity 1) Task Technical and Quality Assurance Plans

TJNAF PI – Dave Meekins

TP PI – Joseph Novajosky

SRNL PI – H. Lee Nigg

SRTE will produce both a Task Technical Plan and Task Quality Assurance Plan for TJNAF input, review and approval. The TTP will detail tasks, responsibilities, schedule, requirements and specifications for the agreed scope. The TQAP will define Quality Assurance requirements.

Activity 2) Understanding Beam Conditions; Material Properties

TJNAF PI – Dave Meekins

SRNL co-PIs – Mike Morgan, Ashley D. Elizondo

SRNL personnel will document beam conditions and known material properties which may be useful in the design of experiments. Project expectations and early design-of-experiment will also be proposed and discussed. Three SRNL personnel will travel to TJNAF.

Activity 3) Identifying Relevant Experiment Parameters and Property Tests

TJNAF PI – Dave Meekins

SRNL co-PIs – Mike Morgan, Ashley D. Elizondo
SRNL personnel will identify relevant experimental parameters, given beam conditions, and property tests that provide specified information and propose to TJNAF for approval. Some of this scope may also occur in Activity #2. Some possible parameters and property tests may include:

Parameters:
- sample (coupon) dimensions
- notched samples
- un-notched samples
- up to 5k psi tritium gas
- up to 200 °C
- age for helium build-in: 0 to 1 year

Property Tests:
- bending strength
- tensile strength
- microstructural analysis (SEM, TEM, etc.)
- tests at elevated and/or low temperature

Property tests are designed to determine any microstructure changes and, if so, their effect on material properties/performance.

Activity 4) Design of Experiment

TJNAF PI – Dave Meekins

TP PI – Joseph Novajosky

SRNL co-PIs – Mike Morgan, Ashley D. Elizondo

SRTE will build a design of experiment for this program. SRNL will also propose to TJNAF for approval. SRTE will also create relevant procedures and acquire necessary hardware. At this time anticipated parameters may include the following. These will be more formalized in the TTP.

- up to 12 coupons
- some notched
- some un-notched
- half of notched → bending strength
- half of un-notched → tensile strength
- selected coupons → microstructure analysis
- sampling and testing → ~ every 4-8 weeks (TBD)

Activity 5) Loading/Storing Samples with Tritium

TJNAF PI – Dave Meekins

TP co-PIs – T. Scott McGee, Joseph Novajosky

SRNL co-PIs – H. Lee Nigg, Mike Morgan
SRTE will load and store samples at specified conditions/parameters. SRTE will provide procedures and necessary hardware. The storage vessels are anticipated available (assuming coupons fit). There is an assumption that loading and storage procedures can be created with slight modification of existing procedures.

Activity 6) Performing Property Tests

TJNAF PI – Dave Meekins

TP co-PIs – T. Scott McGee, Joseph Novajosky

SRNL co-PIs – Mike Morgan, Ashley D. Elizondo

SRNL will property test samples. SRTE will provide procedures and necessary hardware. The property testing equipment is assumed available. Tests will likely occur each of the first 3 months followed by every other month (TBD).

Activity 7) Evaluation and Reporting

TJNAF PI – Dave Meekins

SRNL co-PIs – Mike Morgan, Ashley D. Elizondo

SRNL will report the details and data of all activities including assessments and evaluations of property performance.

Activity 8) Disposal of Samples/Materials

TP PI – Joseph Novajosky

SRNL PI – Mike Morgan

SRTE personnel will dispose of samples per procedure. Procedures and hardware are assumed available.

Post-Beam Structure Analysis

TJNAF will ship the used target for unloading to the SRS Tritium Facility. This scope is funded by a different ICO.

Afterwards, SRNL may perform a burst test followed by microstructure analysis. If this is performed, SRNL will create procedures and provide all hardware. This is noted for information purposes. It is not funded at this time. Funding may be negotiated at a later date.

Proposed Schedule and Budget Tables

The tables below show proposed schedule and fully burdened costs for the listed scope split into TP and SRNL portions as well as FY15 vs. FY16 activities. Labor rates and overheads can and do change over the course of any FY and between each FY. Labor, materials and travel are included in the budget numbers.

Meetings and activities where personnel may travel to one location or another are indicated. The anticipated experiment (beam time) is also shown. Note that schedule changes will be addressed in a revised Statement of Work and ICO Request.

The total cost is ~ $80k split: ~$60K in FY15 and ~$20k in FY16.

CY/FY	14/15			15/15									15/16			16/16								
Scope Schedule	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep
1) Task Technical Plan and Task Quality Assurance Plan

III. ADMINISTRATION AND REPORTS

A. This IWO shall be administered by JSA/Jefferson Lab's Subcontracting Officer, Julie Tyler. **Only the Subcontracting Officer has the authority to commit JSA to changes in the IWO.** Administrative correspondence shall be addressed to the TJNAF Procurement Department. Attention: Julie Tyler 628 Hofstadter Road, Suite 5, Newport News, VA 23606. Telephone (757) 269-7284. Facsimile (757)269-7057; Email: jtyler@jlab.org.

B. Technical correspondence shall be submitted to the Jefferson Laboratory technical point of contact at the following address:

Thomas Jefferson National Accelerator Facility
12000 Jefferson Avenue
Newport News, VA 23606
Attention: Technical Point of Contact: Dave Meekins

C. All components and end items paid for with funds under this IWO shall become Government Property under the control and responsibility of JSA.
