Presented by Tim Whitlatch

Beryllium Target Assy

Beryllium Target Section

Design Requirements/Specs

- Beryllium Target
 - 6cm diameter
 - 40 cm length
 - 300W power absorption
 - Water cooled- separate chiller system
- Tungsten absorber
 - 15.24 cm square
 - 10cm length
 - 5.2KW power absorption
 - Water cooled - separate Chiller system required

Tungsten Absorber Thermal Analysis

- ▶ Power absorption data provided by Vitaly Baturin
- ▶ Modelled in ANSYS Static Thermal
- ▶ Shows maximum delta T of 117C
- ▶ Outer Surface cooled with water under 100C
- ▶ Maximum Tungsten Temp 216C
- ▶ All can be accommodated

3D Rendering - cooling plates on 4 sides - Max water temp less than 50C - 4 circuits

Tungsten Absorber 5.2 KW total input - 2 W/m² convection US face - 80C air temp

Beryllium Target Water Cooled

Cooling System For KPT Target and Absorber

- ▶ 5.2 Kw from Tungstem
- ▶ 300 watts from Berylium
- ▶ Separate 6Kw Chiller - recirculated water stays in Hall
- ▶ <3 gpm required
- ▶ Delta T of water less than 10C
- ▶ Tungsten has 4 circuits, beryllium 1 circuit

KPT Design Status

- ▶ 95% Complete Final Design Drawings
- ▶ Need to finalize Collimator or Profiler

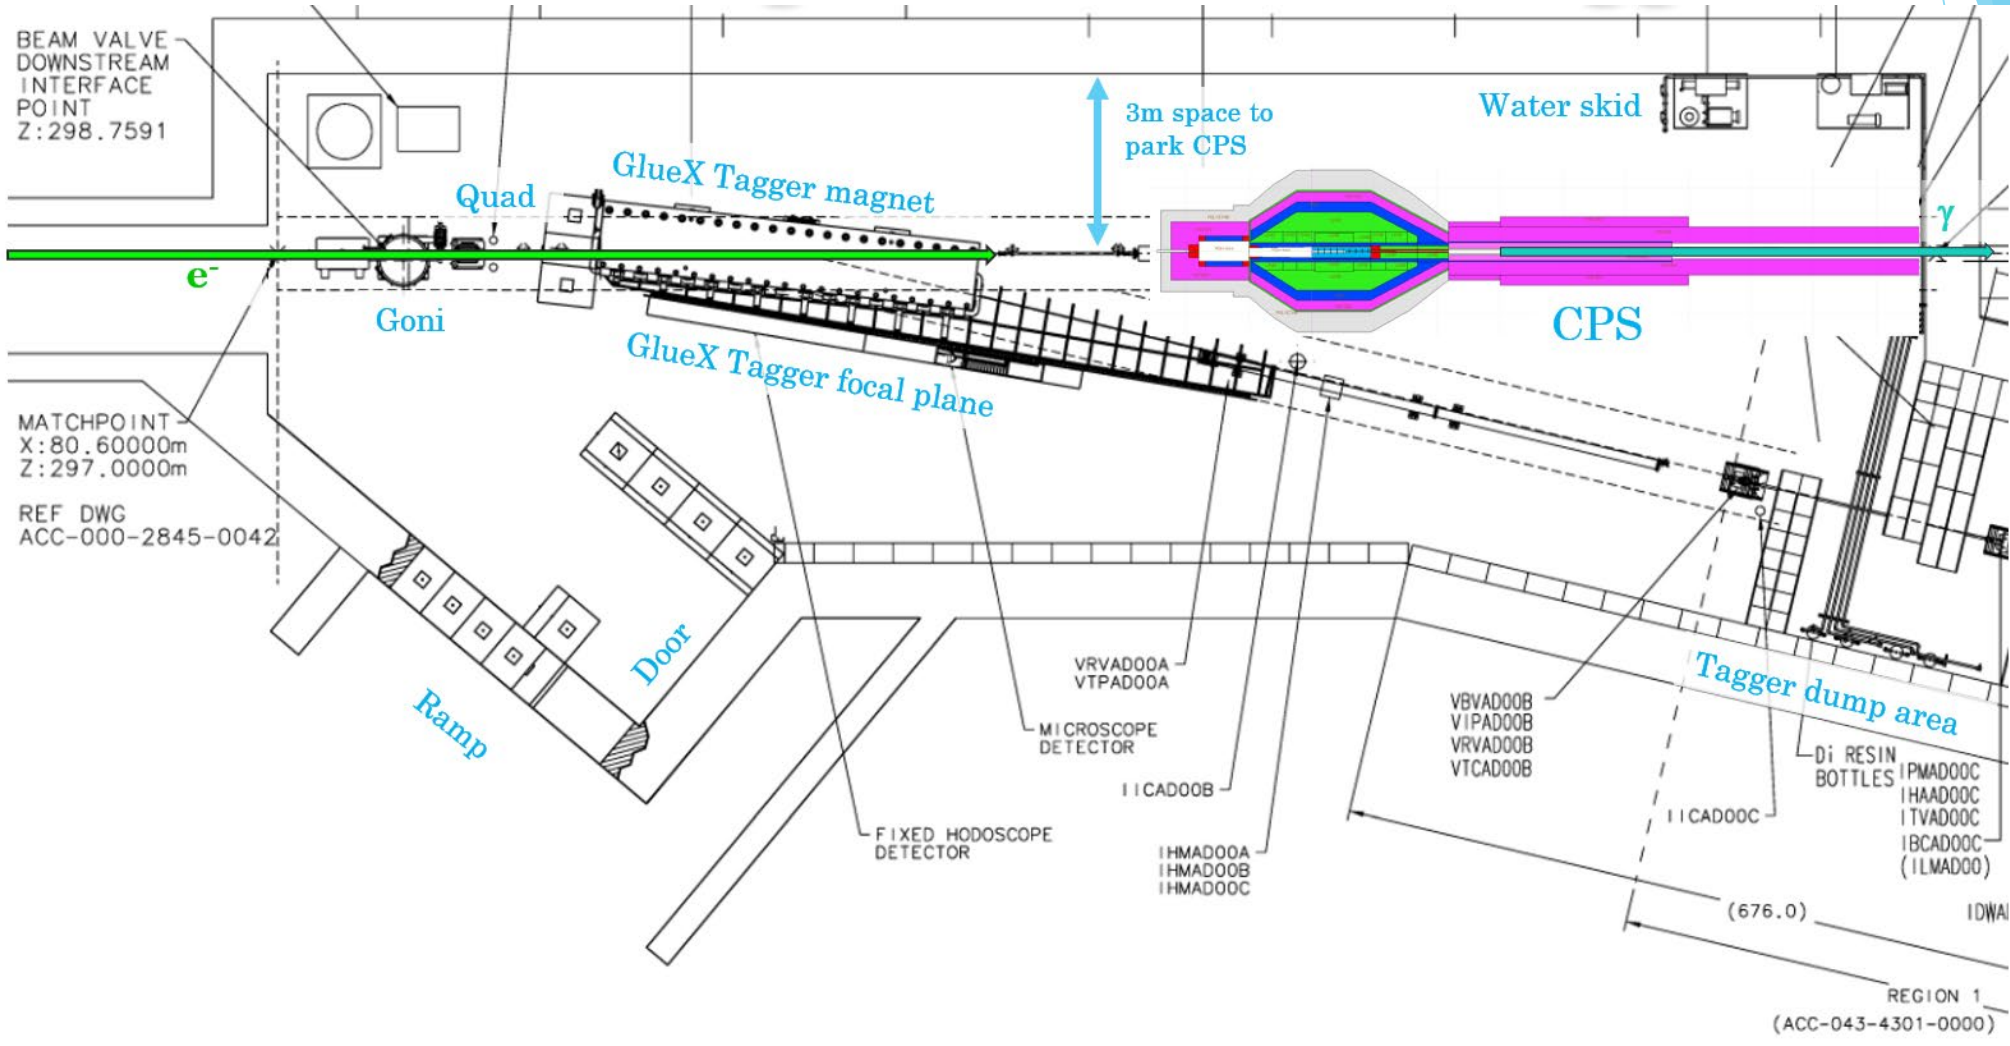

KPT Costs

Equipment	qty	cost ea \$	Fab cost \$	Total cost \$
Beryllium target	1	11,000		11,000
Beryllium support	1	1,100		1,100
Tungsten absorber	1	12,000		12,000
Target Lead Bricks	1190	52	2000	63,880
Target Support structure	1	0	9000	9,000
Hilman rollers	4	850		3,400
Rails	2		1850	1,850
wedge levelers	4	700		2,800
leveler base plate	4		2100	2,100
borated poly sheets	24	800	4800	24,000

Thermal Stress - copper absorber C101

Full Hard

- ▶ Strain = Alpha * delta T
- ▶ Stress = Youngs Modulus * Strain
- ▶ Strain = $1.674 \times 10^{-5} / C * 172C = .0029$
- ▶ Stress = $1.26 \times 10^{11} \text{ Pa} * .0029 = 365 \text{ MPa}$
- ▶ Allowable yield stress = 283 Mpa
- ▶ Model Shows stress higher than yield in linear analysis
- ▶ Need to do non-linear analysis once finalized

Pavel 75 Keyhole Model 52Kw - Total Stress

CPS Cooling Requirements

- ▶ 54KW to be removed
- ▶ Use existing Tagger Dump Cooling Skids (60 KW)
 - ▶ 30 gpm total available for 2 skids
 - ▶ Local recirculation LCW
- ▶ 2 circuits needed

Cooling System For CPS

- ▶ 52 Kw from Copper Absorber
- ▶ Use existing dump cooling system - recirculated water stays in Hall
- ▶ 30 gpm required
- ▶ Delta T of water less than 8C
- ▶ 4 water cooling channels
- ▶ Maximum temperature at water cooling channels 98C
- ▶ 2 parallel circuits

CPS Cost Estimates

Civil requirements

- ▶ Collimator Floor Capable of supporting additional 120+ Tons
- ▶ Tagger Hall Floor Capable of supporting additional 120+ Tons
 - ▶ Facilities will re-evaluate when final weight is determined
 - ▶ Facilities to install concrete pier

Conceptual Flux Monitor Setup in Hall D

MRI Magnet can fit in existing space

Decommissioning

- ▶ CPS
 - ▶ Roll CPS to South wall in the Tagger Vault
 - ▶ Remove CPS beamline and shielding
 - ▶ Reinstall GlueX beamline
 - ▶ Reinstall Hodoscope, Microscope and electronics
 - ▶ Reinstall Dump cooling
 - ▶ 6 months duration
- ▶ KPT
 - ▶ Roll Target to North wall
 - ▶ Remove KPT shielding and beamline
 - ▶ Reinstall GlueX beamline
 - ▶ 4 months duration
- ▶ KFM
 - ▶ Remove KFM setup
 - ▶ Reinstall GlueX beamline, detectors and target
 - ▶ 1-3 months duration

Status

- ▶ Collimator Cave Final Drawings 95% Complete
- ▶ Preliminary Thermal Analysis Complete for CPS
- ▶ Final Stress analysis for CPS required
- ▶ Integrated Installation Plan Needed
- ▶ Flux Monitor in Conceptual Phase - Proposed MRI will fit
- ▶ CPS Design Work to start Following ERR Approval
- ▶ Hall D hiring an additional Engineer

Backup

Cave Layout Elevation
