Raw ADC Check

raw_ADC_W391

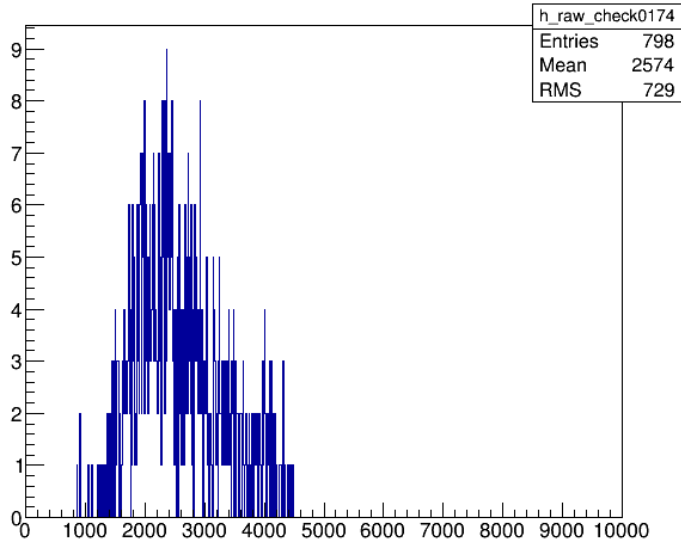

12 channels have abnormal ADC distribution (low gain ?)

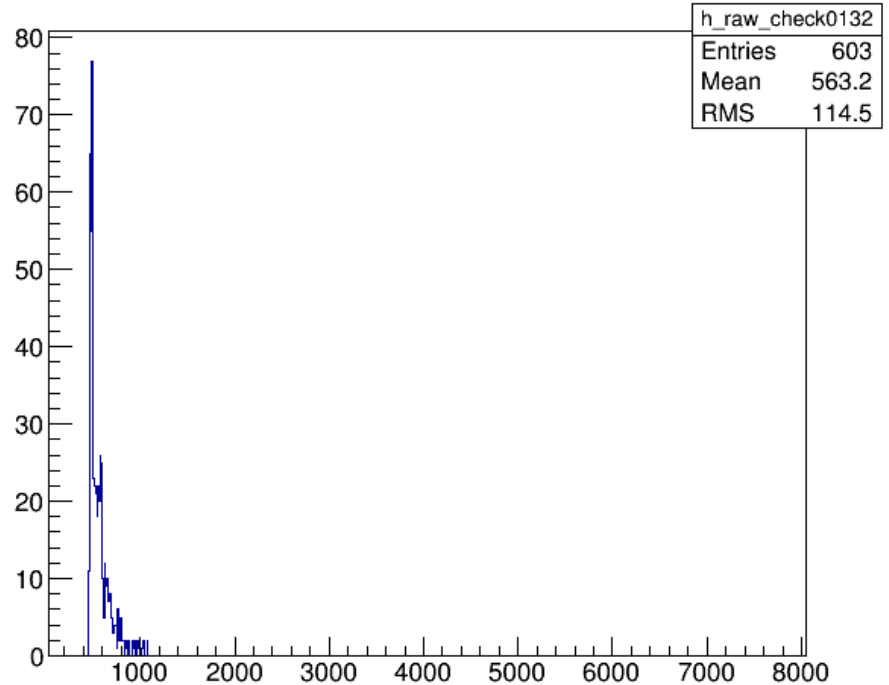

G130 G131 G132 G133 G134 G135 G171 G572 G732

W528 W630 W891

raw_ADC_G174

adc_plot0076

Find mean value of ratio for each module:

ratio_val[i], where i=module.id

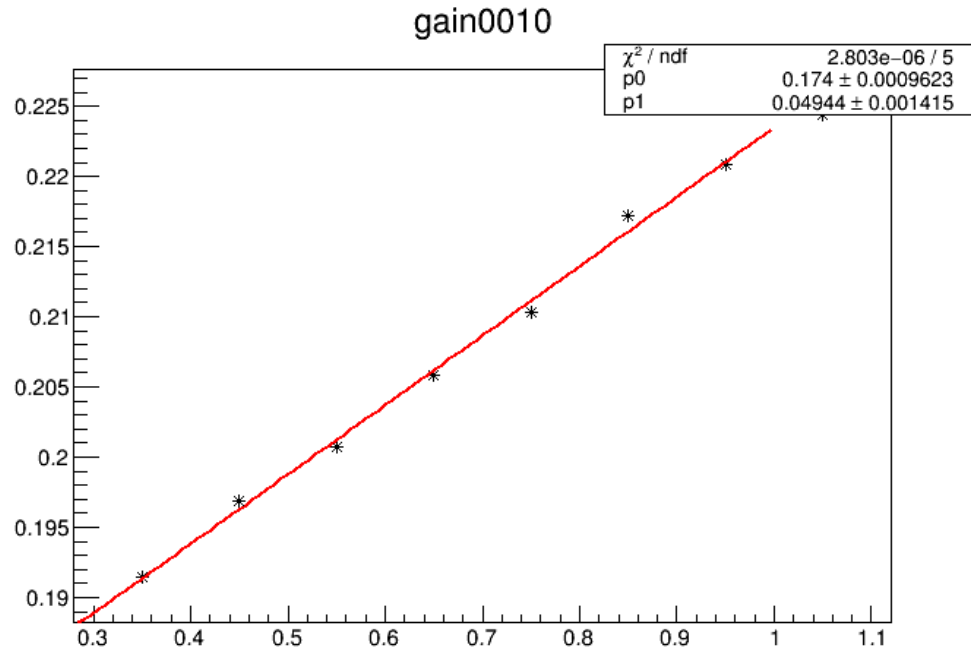

new_gain[i] = old_gain[i]/ratio_val[i].

Then next round ...

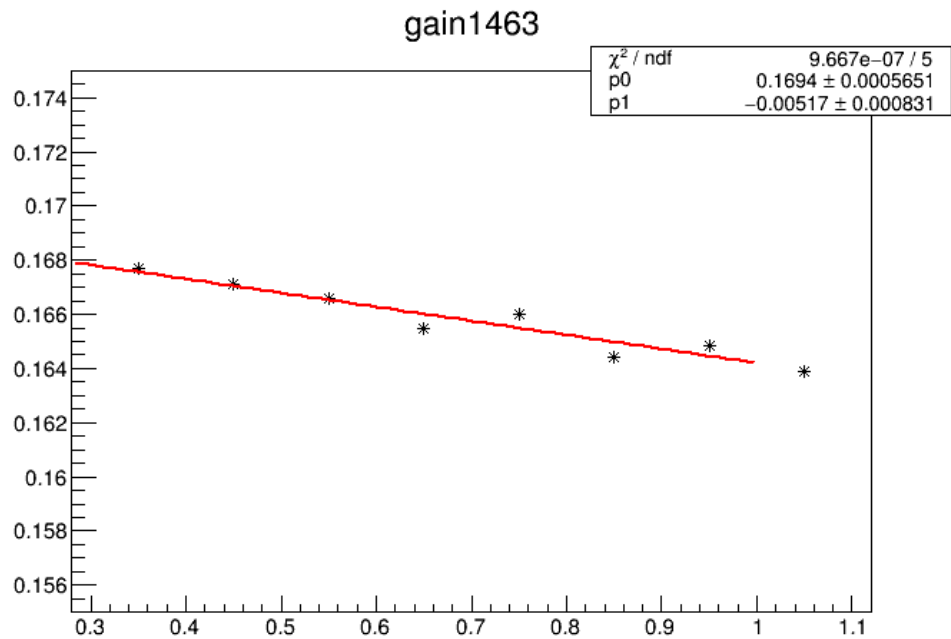

Till good enough then do different energy bins get :

ratio[ebin][i] → new_gain[ebin][i] → fit → gain function ($gain[e] = p_0 + p_1 * e$)

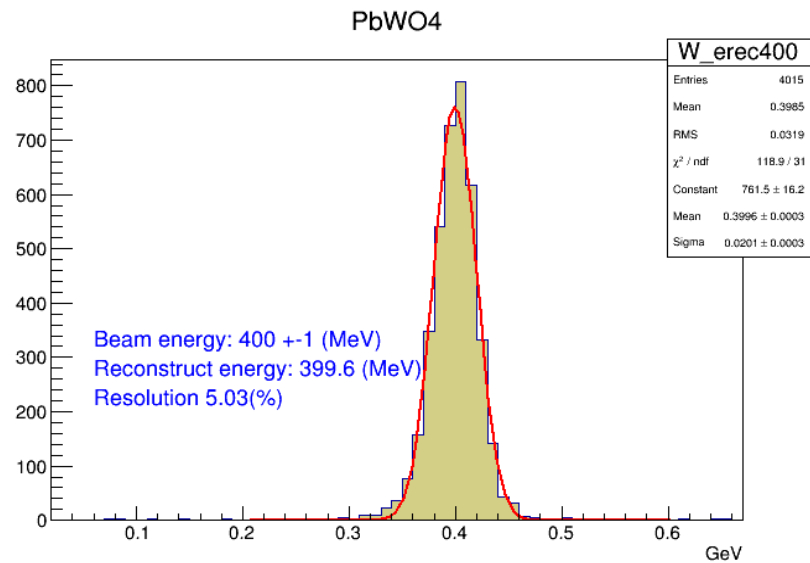

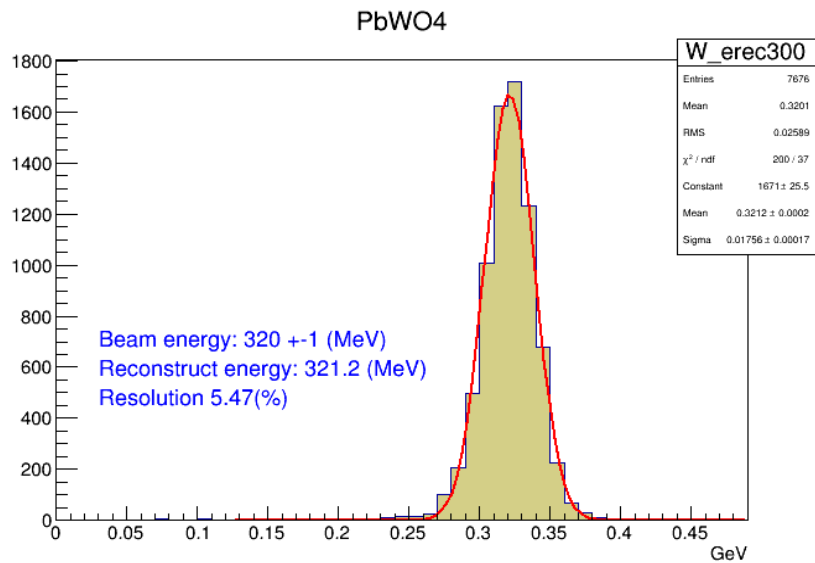

Example of Lead Glass (G10)

Example of PbWO4 (W463)

e_rec VS e_beam

Next

Keep tuning for different bins.

Special treatment for 'low gain' channels.

Minimize the fluctuation of gain[bin].

Final tuning with production run.
