

Data Stability and Calibration Status

Maxime Levillain

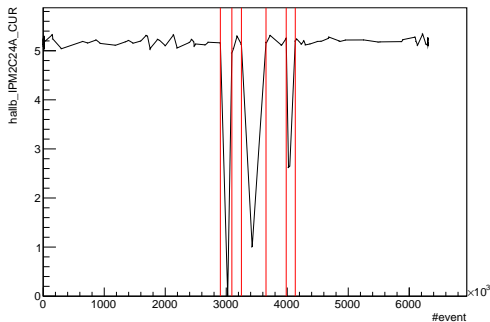

July 29, 2016

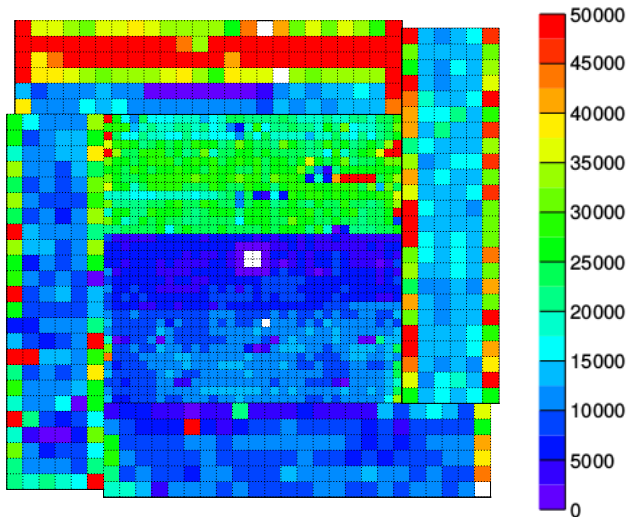

- ▶ Not possible on our own wiki
- ▶ Possibility to create another wiki with password protection

- ▶ Event cut when beam current drops down 30%

all events	bad events	percentage
380 925 026	9 881 589	2.6

Heterogeneity of events in calibration runs

- ▶ Causes: change of gates after run 935
- TotalSum not triggered

- ▶ Possible solutions: Looking at Tagger Trigger events and adjusting some cuts on energy.
 - ▶ $E_{cluster} > 200 \text{ MeV}$
 - ▶ $\chi^2_{cluster} > ??$
