

## *ep* Cross-section for 2.2 GeV period

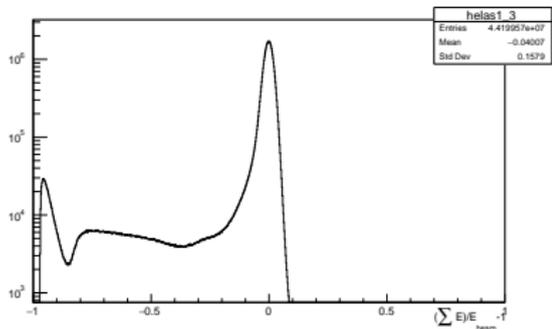

Maxime Levillain

April 7, 2017

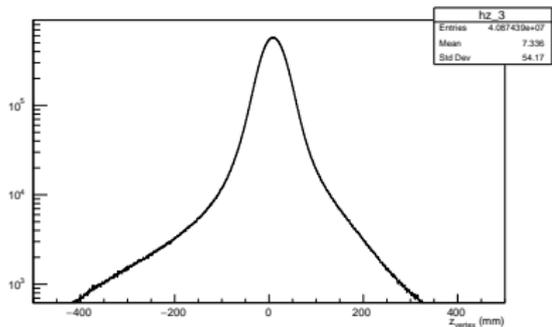

- ▶ 2.2 GeV from run 1443 to 1516 divided into 2 subperiod
- ▶ cut on elasticity:  $4\sigma$
- ▶ cut on  $\Delta\phi$ : 10 deg
- ▶ cut on  $z_{vertex}$ : 200 mm

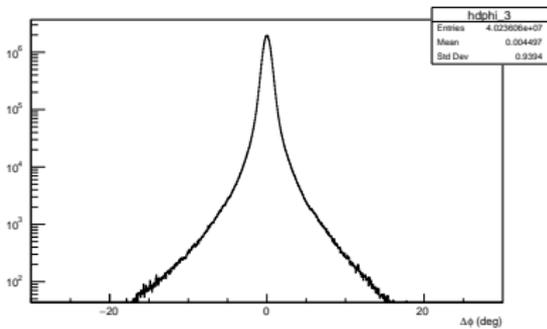

## Elasticity

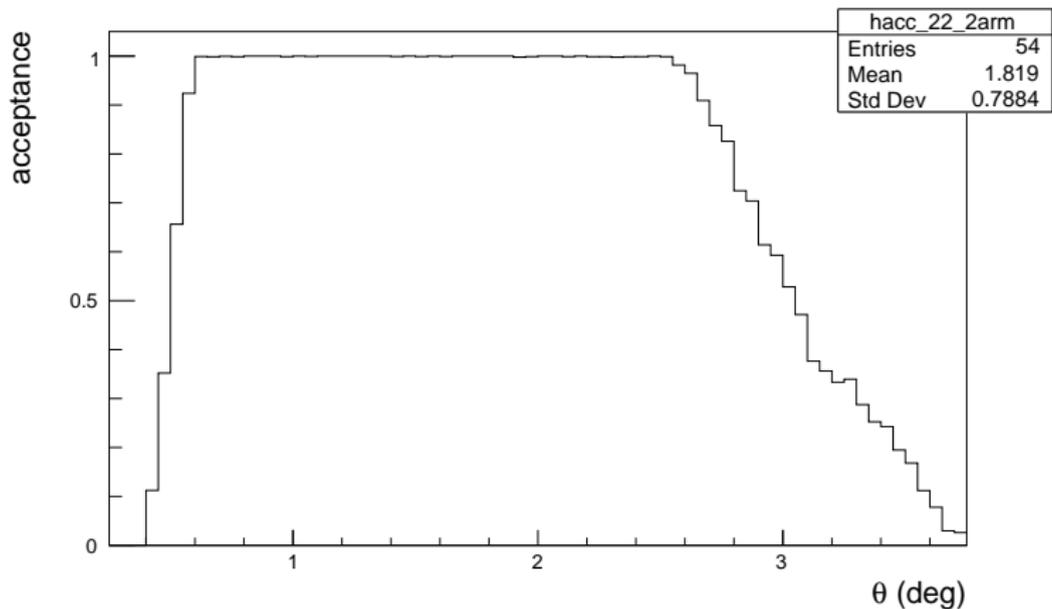

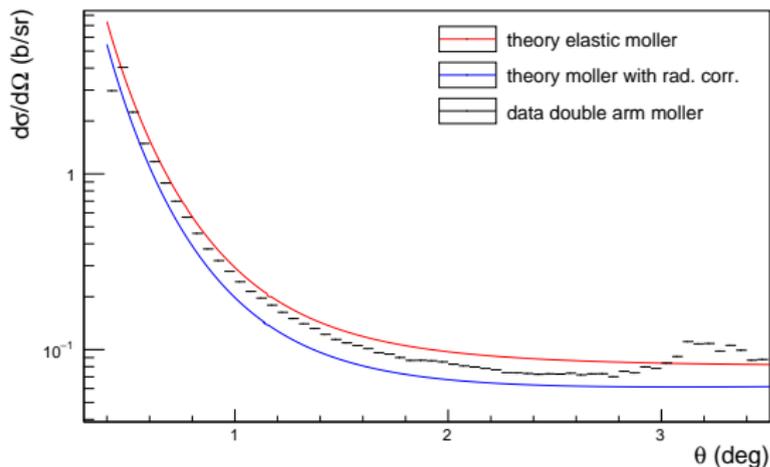

## $Z_{vertex}$

## $\Delta\phi$

- ▶ Integration between 0.6 deg and 2.5 deg
- ▶  $(\sigma/\Omega)_{theo\ elastic} = 0.1989 (b/sr)$
- ▶  $(\sigma/\Omega)_{theo\ brem} = 0.1434 (b/sr)$
- ▶  $(\sigma/\Omega)_{data} = 0.1692 (b/sr)$
