

The new offset table

Method same as the previous table

Use overlap ee2 events find beam position

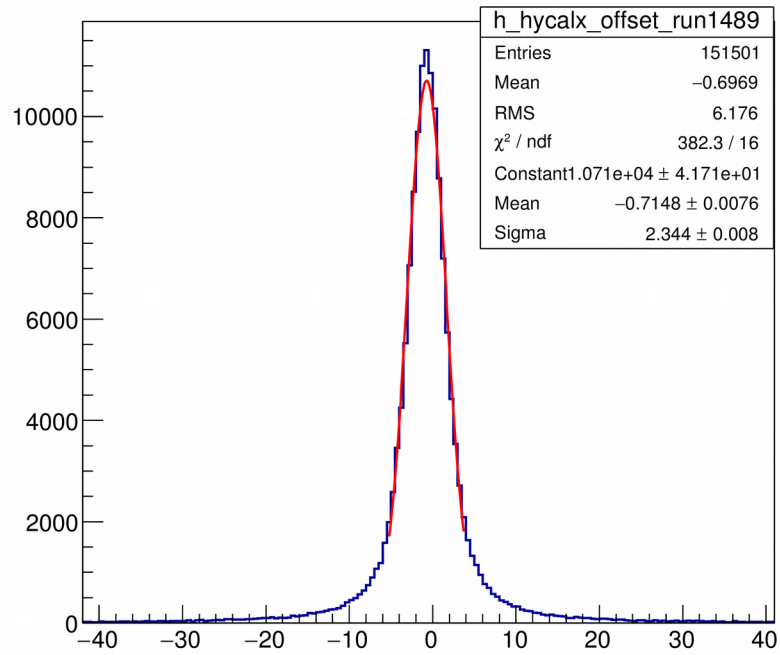

Coordinates follow the convention in PRadAnalyzer

Target is not located at 0, instead $Z_{\text{target}} = 88.9\text{mm}$ (downstream)

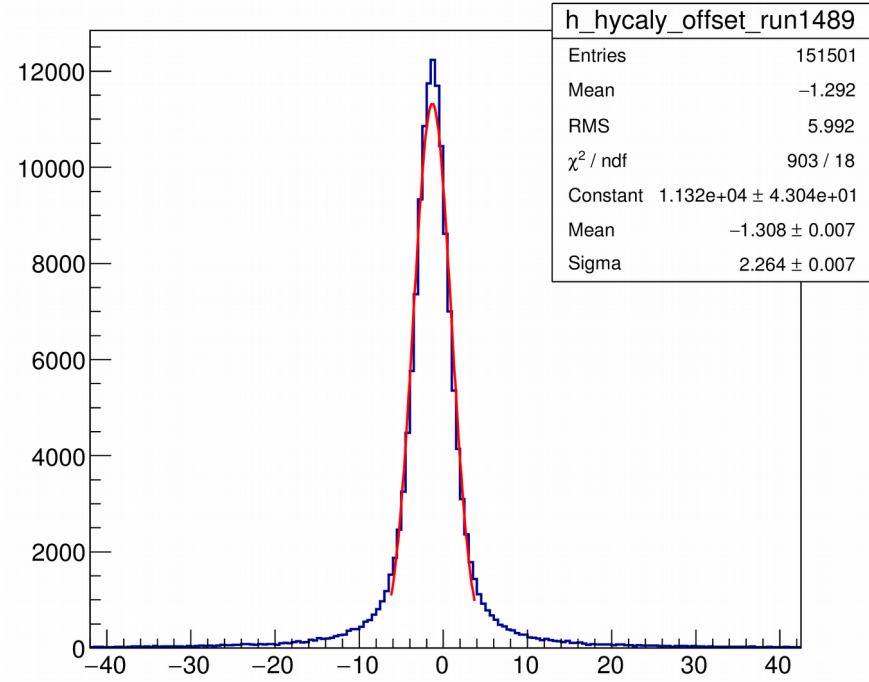

All coordinates have been calibrated

The new offset table

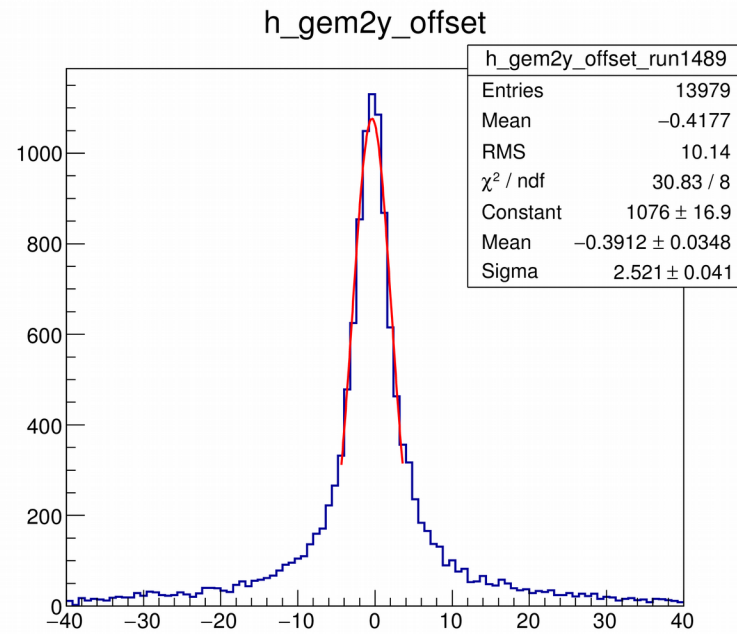

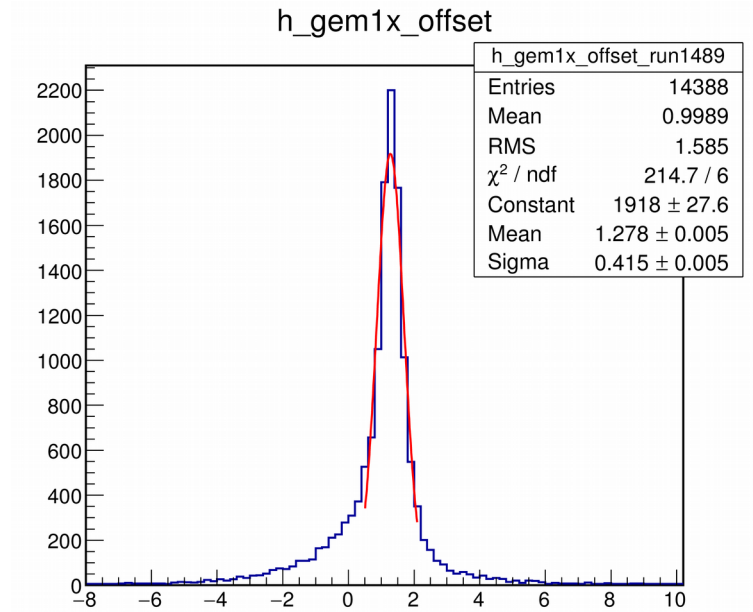

h_hycalx_offset

h_hycaly_offset

The new offset table

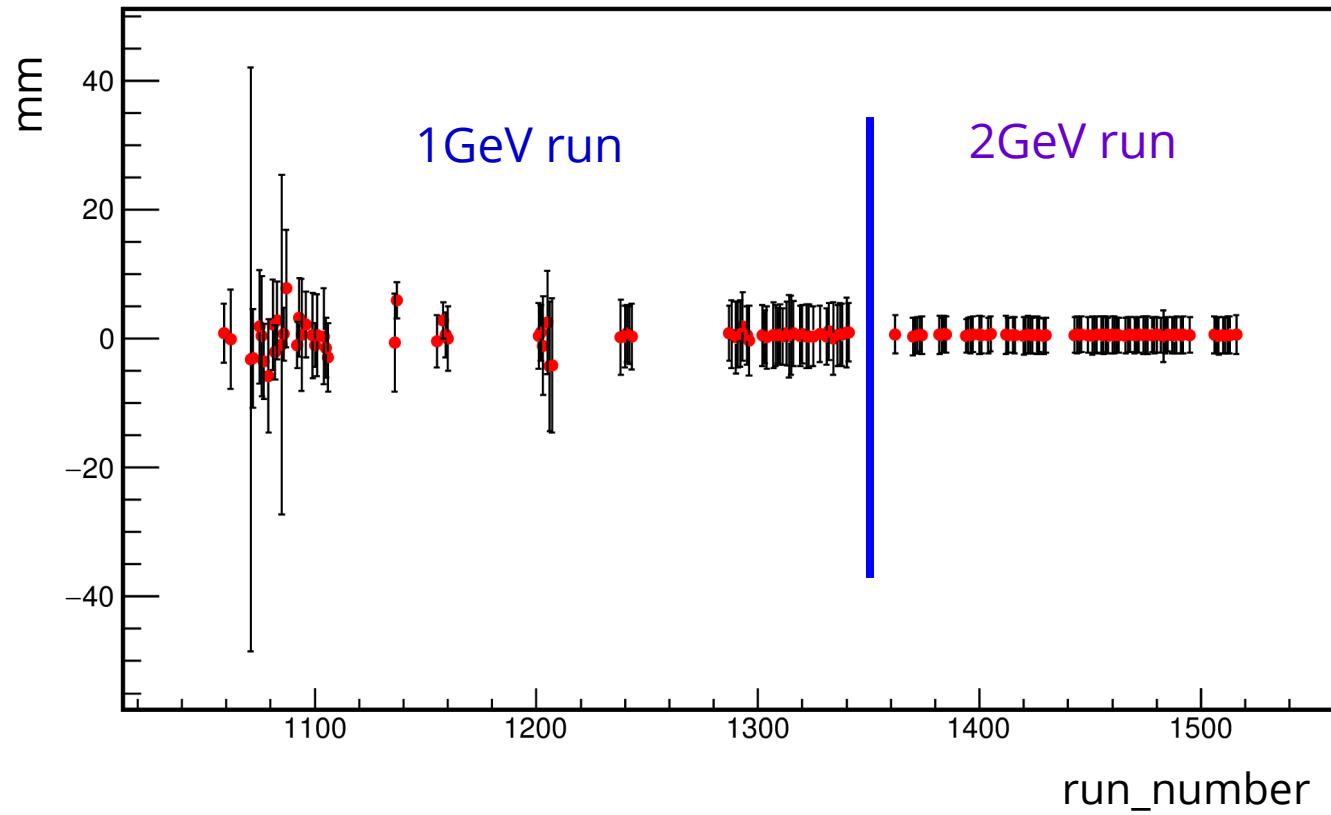

The new offset table

GEM1 X offset vs run number

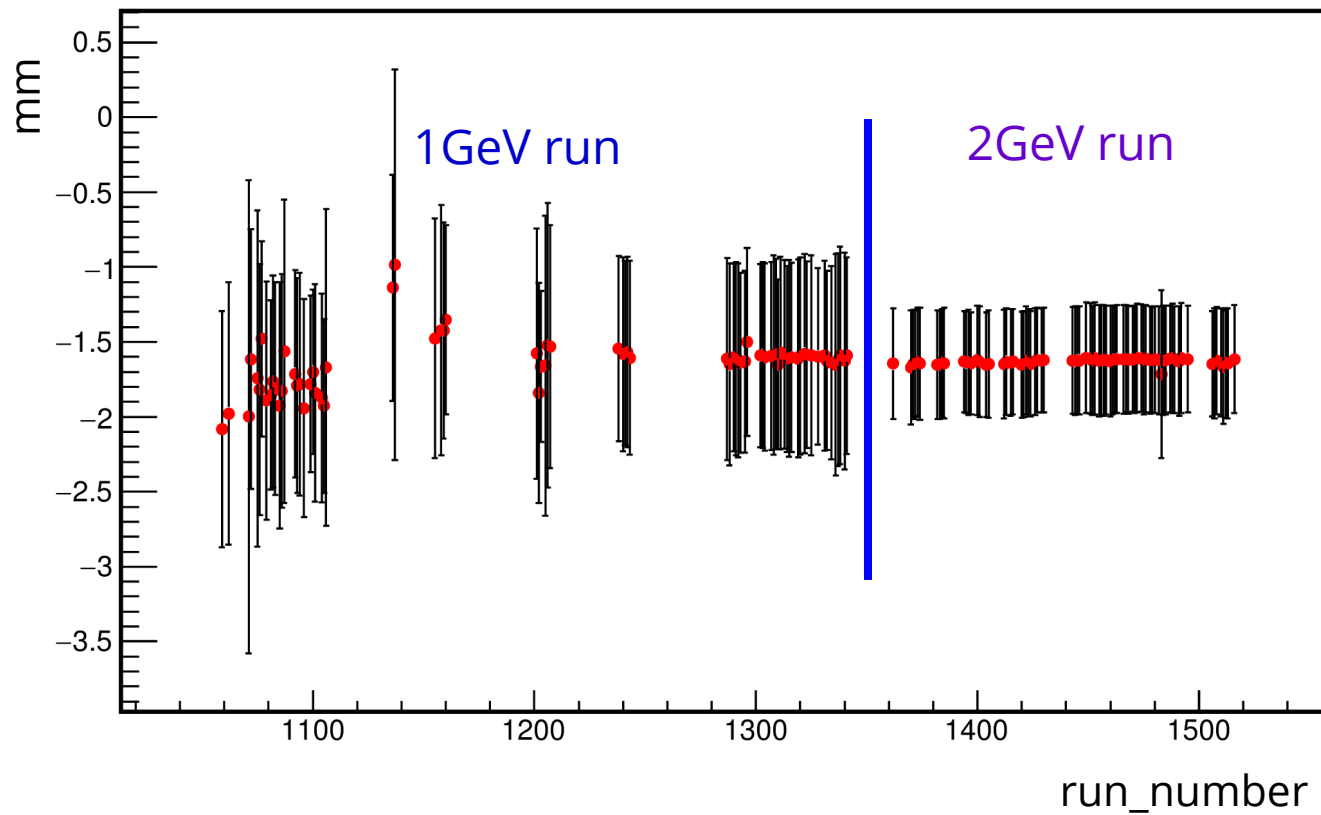

The new offset table

GEM1 Y offset vs run number

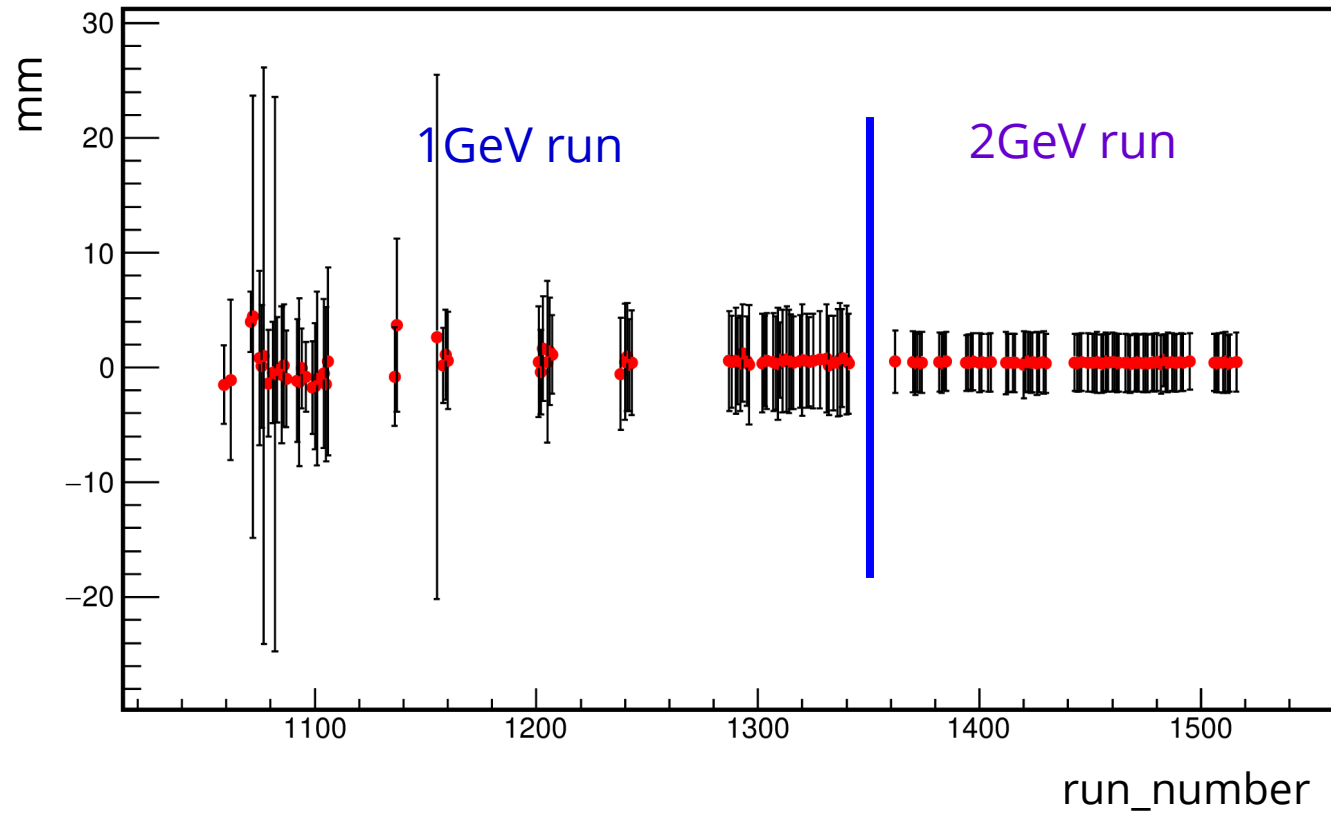

The new offset table

GEM2 X offset vs run number

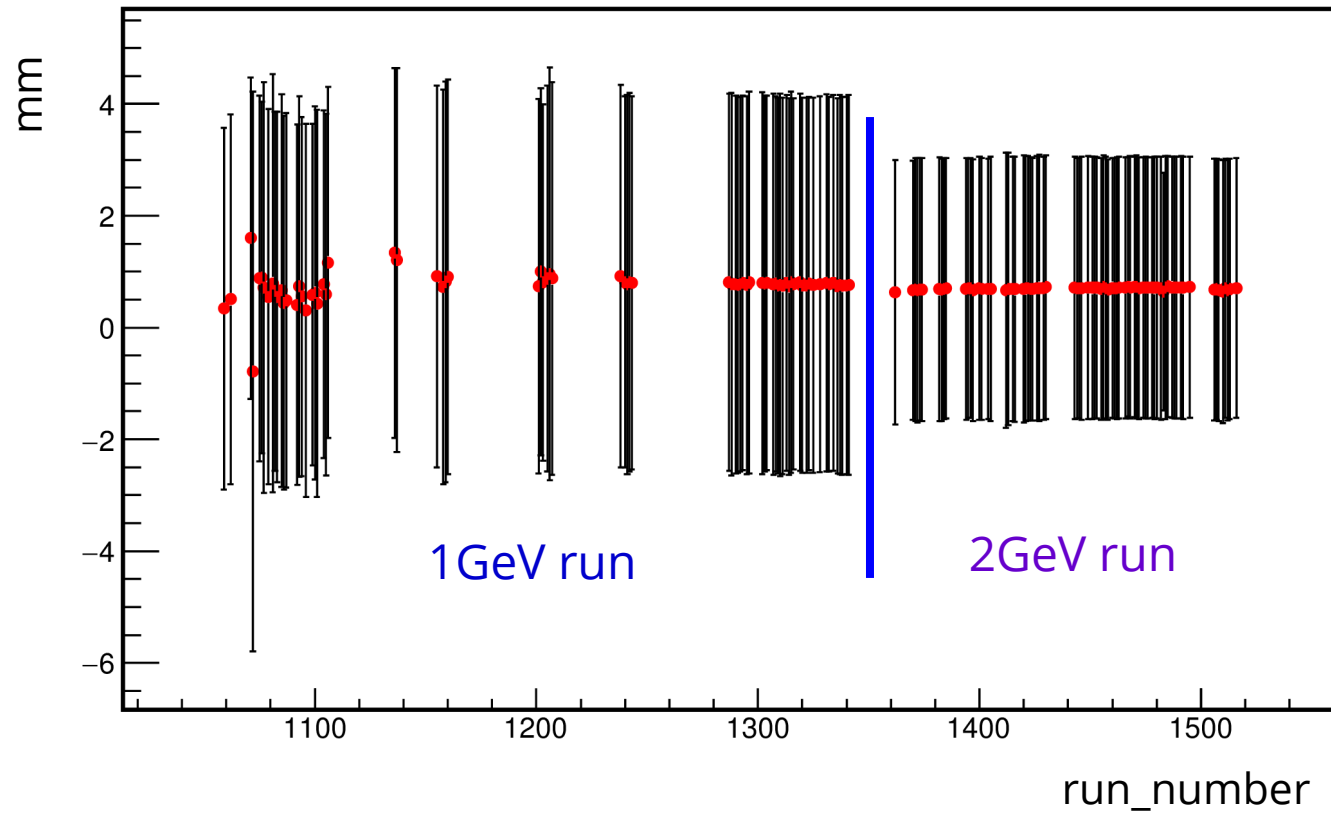

The new offset table

GEM2 Y offset vs run number

The new offset table

HyCal X offset vs run number

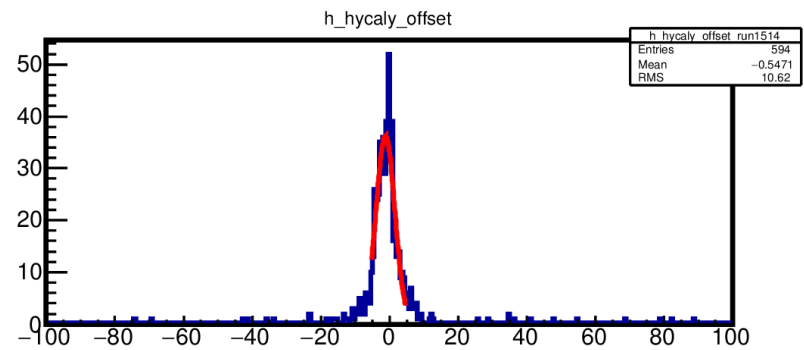

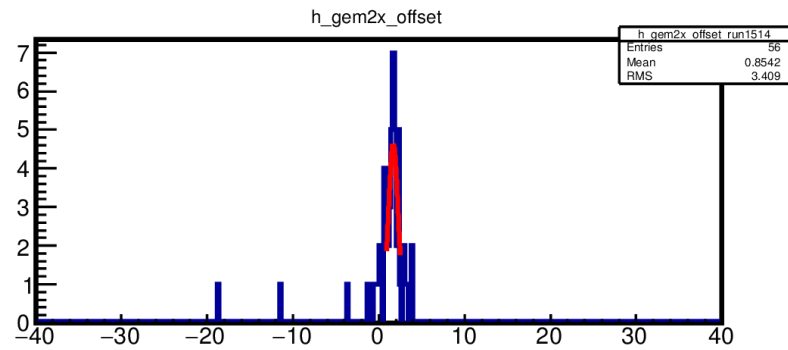

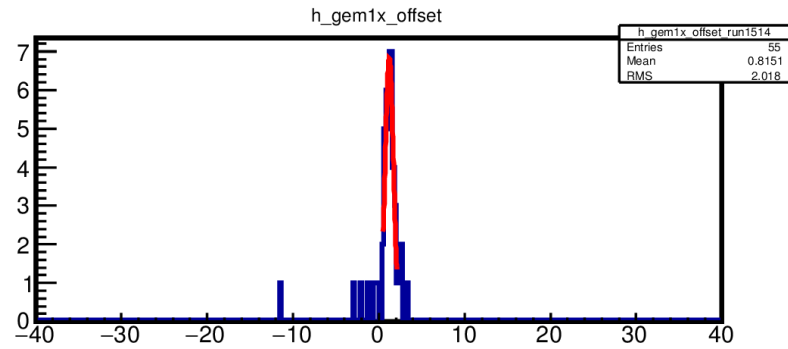

The new offset table

HyCal Y offset vs run number

The new offset table

Empty runs have very few ee2 events in overlapping area
