

New Sieve Slit

Takeru Akiyama (秋山タケル)
Graduate Student, TOHOKU UNIV.

December 8th, 2021

◆ Introduction

About Sieve Slit

◆ Rough Design (basic idea)

Thickness, Hole size, spacing, etc...

3D CAD model

◆ Simulation Study by Geant4 (PCS+HKS horizontal)

Hole Image of new Sieve Slit

◆ Future Tasks

Introduction

About Sieve Slit

Sieve Slit: Metal Plate with a lot of holes,
used for angular calibration

- ◆ Mounted just behind of target
- ◆ Specify the position of particles at the plane
- ◆ Angular calibration through optimization of hole pattern image

Sieve Slit: Metal Plate with a lot of holes,
used for angular calibration

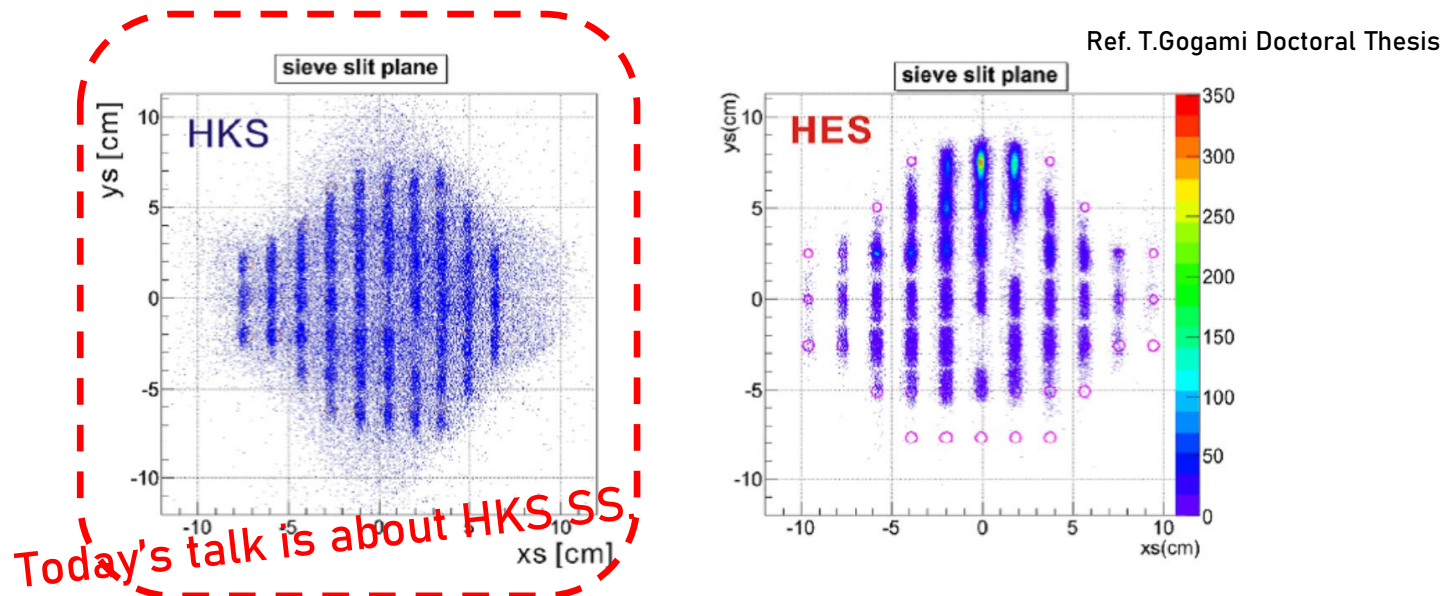

Figure 4.38: Particle distributions at the sieve slits in HKS (Sec. 2.3.5) and HES (Sec. 2.3.6) after the field modifications [77]. The hole patterns of sieve slits were designed to be antisymmetric to avoid a false recognition of the coordinates systems of obtained particle distributions.

- ◆ Mounted just behind of target
- ◆ Specify the position of particles at the plane
- ◆ Angular calibration through optimization of hole pattern image

Rough Design

Thickness, Hole size and spacing, etc...

3D CAD model

Requirement & Design Plan

- ◆ Thickness: 50.8 mm (same as E05-115)
- ◆ Hole tilt:
Angle viewed from target ($Z = 0$)
From target to SS: 60 cm
(150 cm @E05-115)
- ◆ Hole size: $\Phi = 3.5$ mm at least
to keep acceptance for $Z = \pm 10$ cm
- ◆ Hole spacing: 8 mm for X, 9 mm for Y
(Angl. Resolution of HKS $\Delta X' = 1.24$ mrad, $\Delta Y' = 2.96$ mrad)
shift half a cell every other row

3D CAD Model

Requirement & Design Plan

- ◆ **Thickness: 50.8 mm** (same as E05-115)
- ◆ Hole tilt:
 - Angle viewed from target ($Z = 0$)
 - From target to SS: 60 cm
 - (150 cm @E05-115)
- ◆ Hole size: $\Phi = 3.5$ mm at least
 - to keep acceptance for $Z = \pm 10$ cm
- ◆ Hole spacing: 8 mm for X, 9 mm for Y
 - (Angl. Resolution of HKS $\Delta X' = 1.24$ mrad, $\Delta Y' = 2.96$ mrad)
 - shift half a cell every other row

3D CAD Model

Requirement & Design Plan

- ◆ Thickness: 50.8 mm (same as E05-115)
- ◆ **Hole tilt:**
 - Angle viewed from target ($Z = 0$)**
 - From target to SS: 60 cm
 - (150 cm @E05-115)
- ◆ Hole size: $\Phi = 3.5$ mm at least
to keep acceptance for $Z = \pm 10$ cm
- ◆ Hole spacing: 8 mm for X, 9 mm for Y
(Angl. Resolution of HKS $\Delta X' = 1.24$ mrad, $\Delta Y' = 2.96$ mrad)
shift half a cell every other row

3D CAD Model

Requirement & Design Plan

◆ Thickness: 50.8 mm (same as E05-115)

◆ Hole tilt:

Angle viewed from target ($Z = 0$)

From target to SS: 60 cm

(150 cm @E05-115)

◆ Hole size: $\Phi = 3.5$ mm at least

to keep acceptance for $Z = \pm 10$ cm

◆ Hole spacing: 8 mm for X, 9 mm for Y

(Angl. Resolution of HKS $\Delta X' = 1.24$ mrad, $\Delta Y' = 2.96$ mrad)

shift half a cell every other row

3D CAD Model

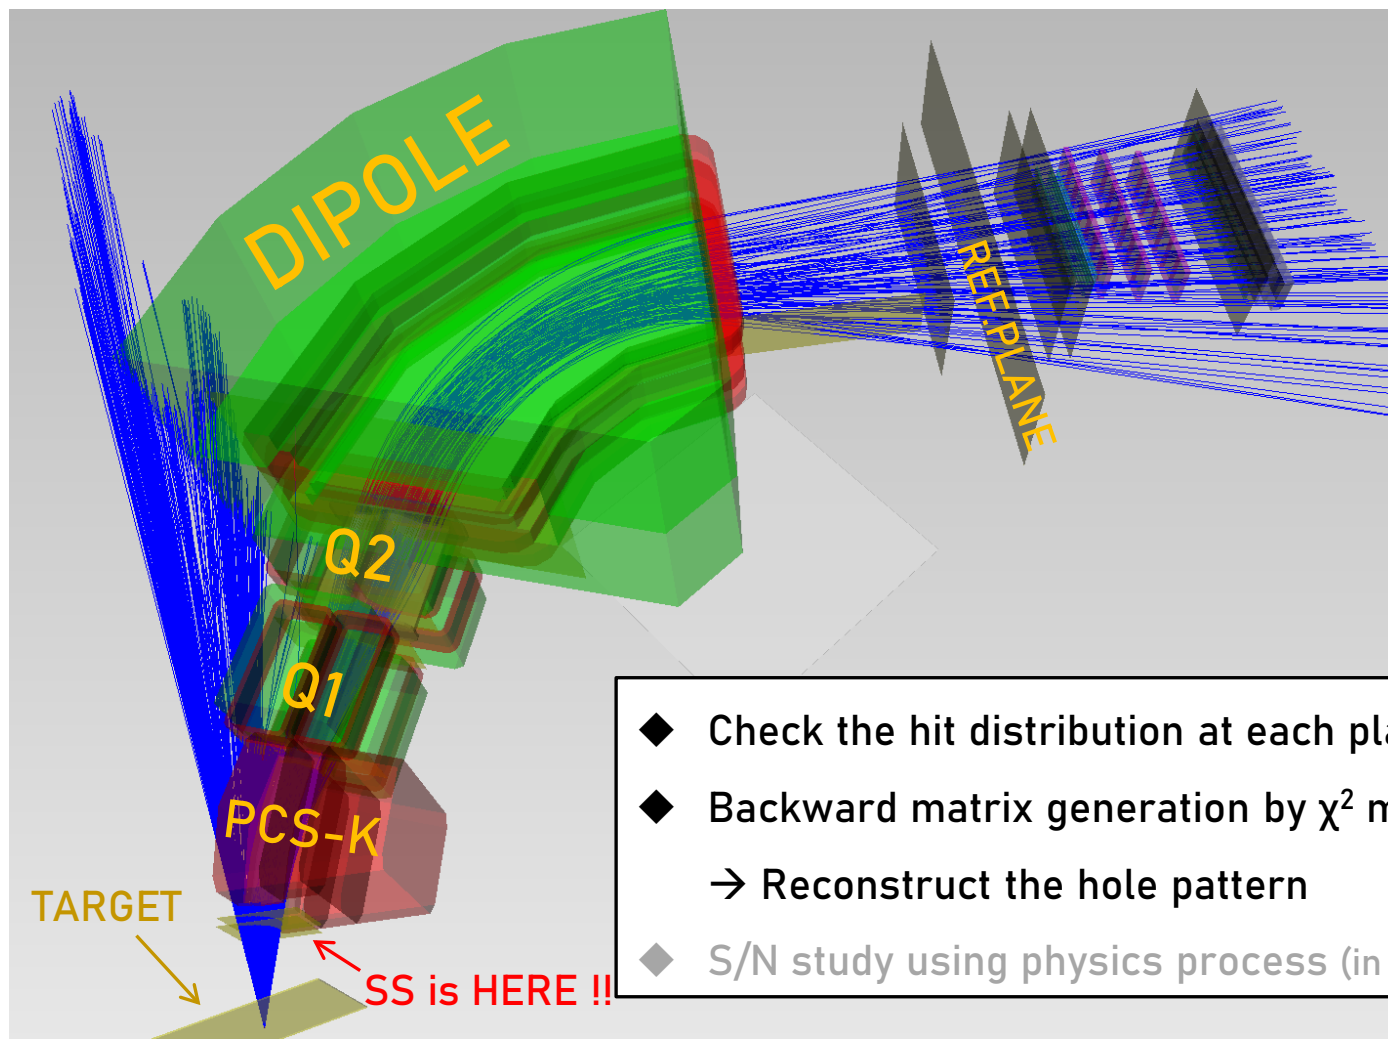

Simulation Study by Geant4

Setup

Hit Distribution at SS Plane

Reconstructed Image of Hole Pattern

PCS+HKS (horizontal) Setup

- ◆ Check the hit distribution at each plane
- ◆ Backward matrix generation by χ^2 minimization
→ Reconstruct the hole pattern
- ◆ S/N study using physics process (in preparation)

PCS+HKS (horizontal) Setup

TRUE Hit Pattern @Front of SS

$\Phi 3.5\text{mm}$ hole

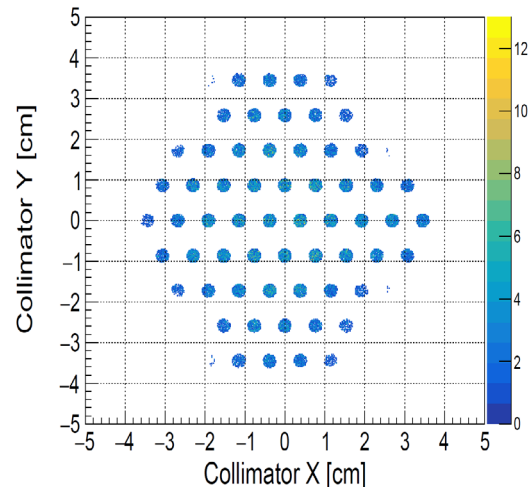

No physics process included, Tracks killed at SS body
Required a hit to TOF2X

$Z = -10\text{ cm}$

(far from SieveSlit)

$Z = 0$

$Z = +10\text{ cm}$

(close to SieveSlit)

◆ Acceptance shape shifted along X direction for $Z \neq 0$

Reconstructed Hit Pattern @Front of SS

$\Phi 3.5\text{mm}$ hole

No physics process included, Tracks killed at SS body

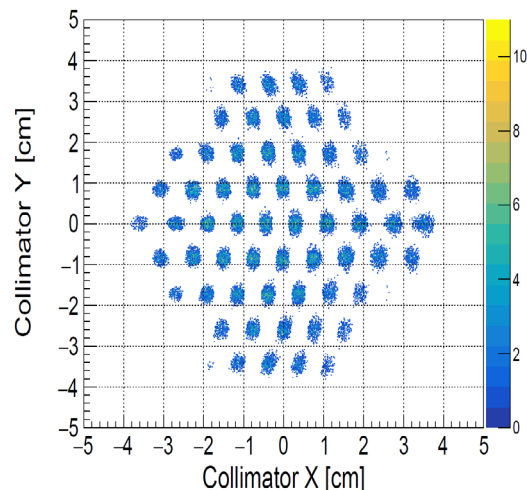

Required a hit to TOF2X

$Z = -10\text{ cm}$

(far from SieveSlit)

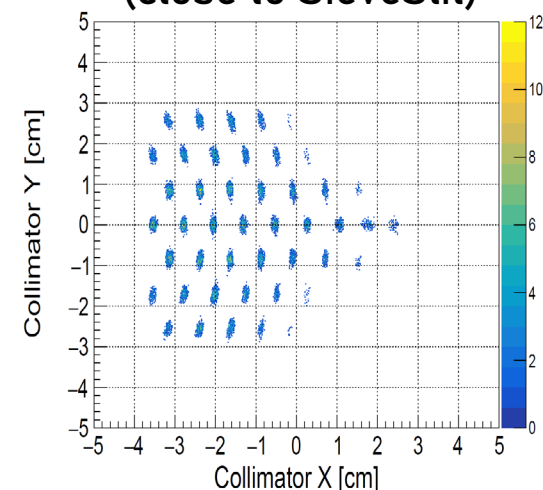

$Z = 0$

$Z = +10\text{ cm}$

(close to SieveSlit)

◆ Acceptance shape shifted along X direction for $Z \neq 0$

◆ Hole pattern can be identified well

Future Tasks

◆ The angle covered by a single hole

Target to SS = 60 cm, Hole Size = 3.5 mm \Rightarrow \sim 5.8 mrad/hole

c.f.) at E05-115 Experiment,

Target to SS = 150 cm, Hole Size = 6 mm \Rightarrow \sim 4.0 mrad/hole

**Is it possible to calibrate the angle with such larger holes ?
or, prepare several sieve slits (with smaller holes) for different Z ??**

\rightarrow Estimation of achievable resolution by the matrix tuning
is necessary

◆ Effect of physics interaction with the SS

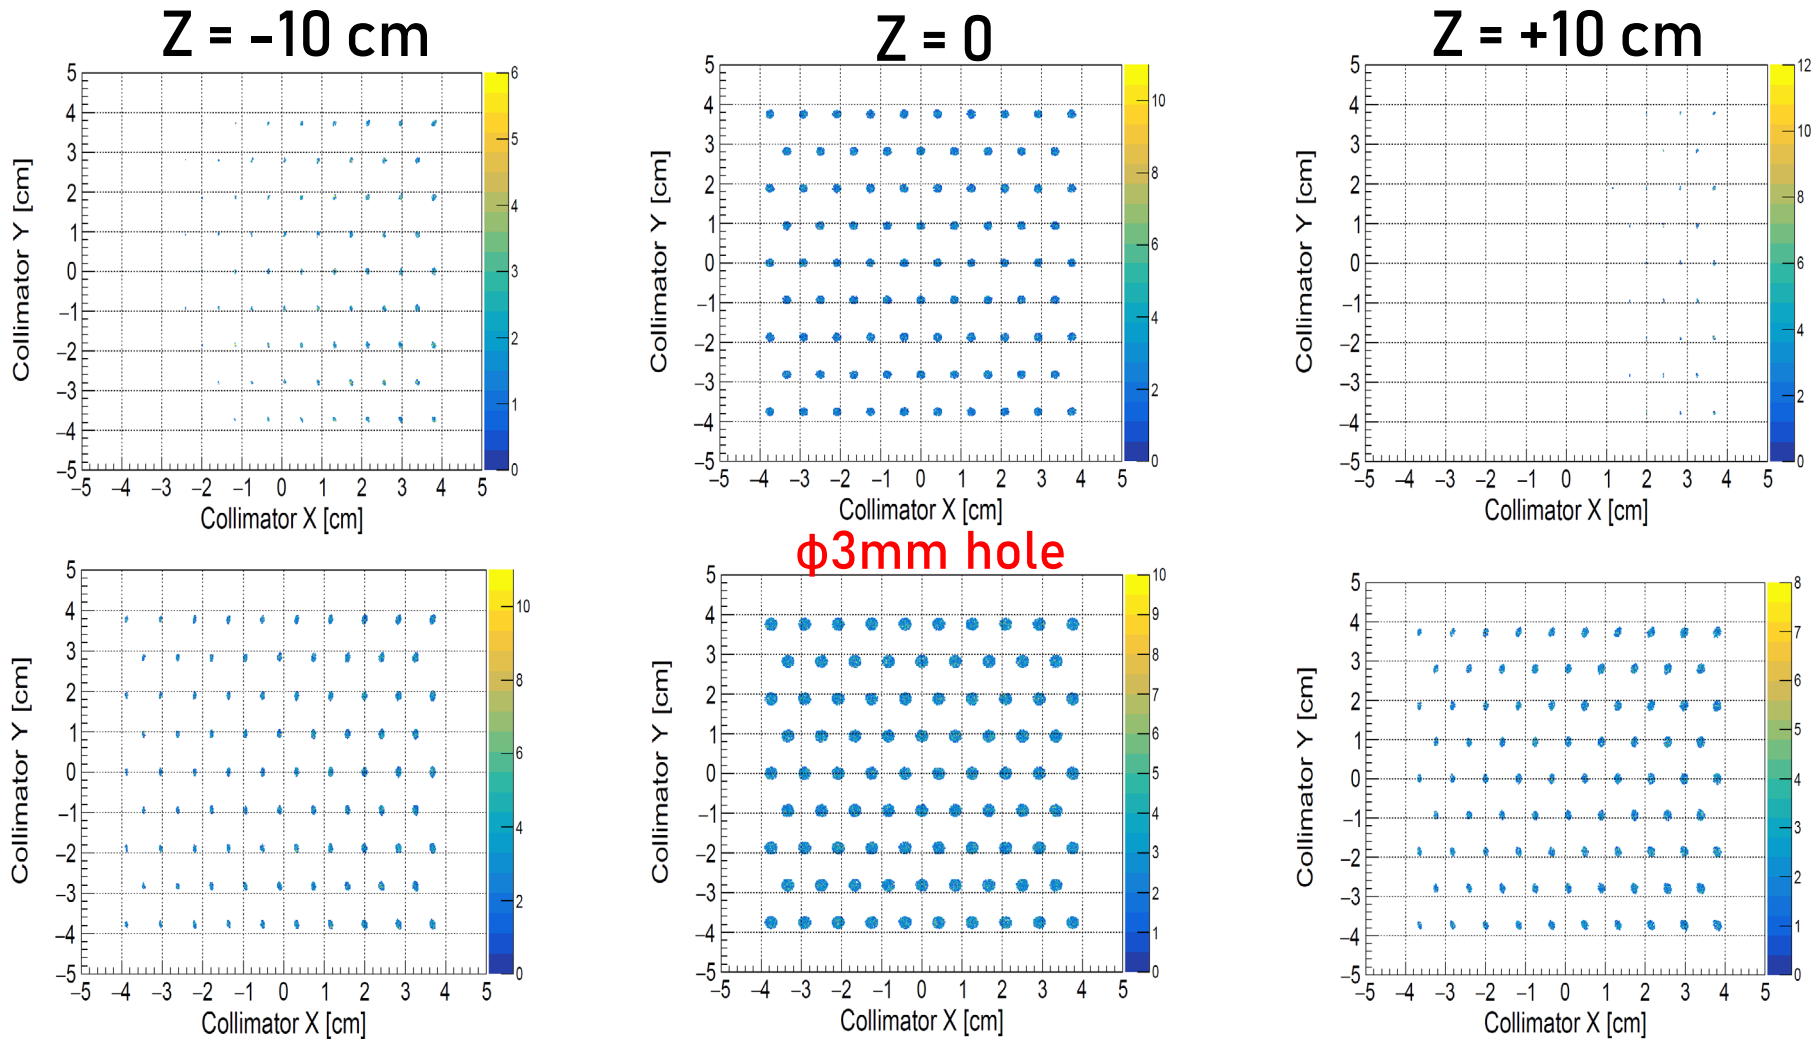

S/N ratio, deterioration due to hole edges

◆ Similar study for HES-side

Hit Pattern @Rear of SS

Tracks which hit the SS are killed.

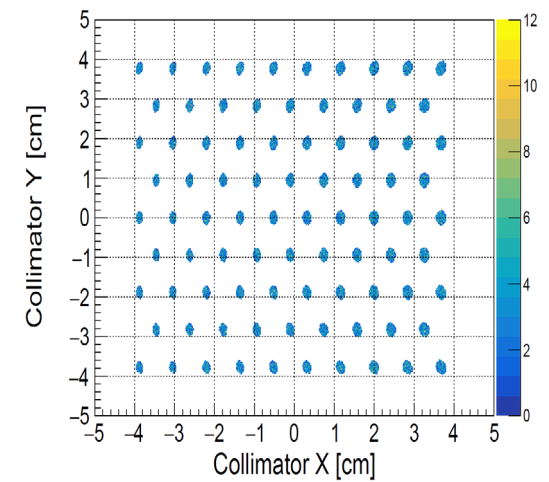

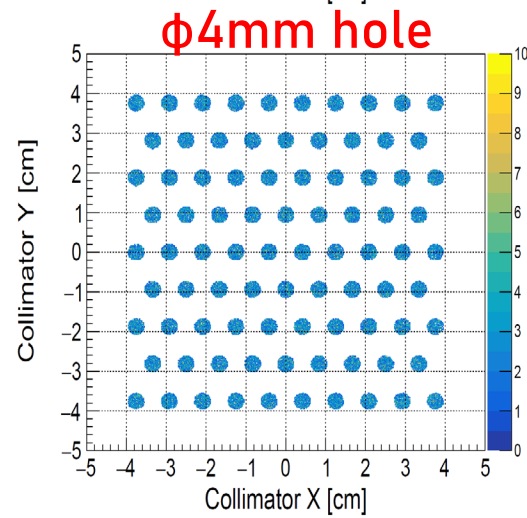

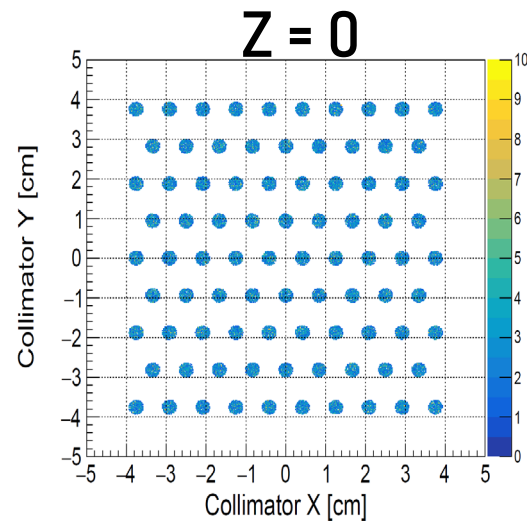

$\phi 2\text{mm hole}$ = cannot pass through the SS

Hit Pattern @Rear of SS

Tracks which hit the SS are killed.

$\phi 3.5\text{mm hole}$ = seems reasonable hole size

Angular Resolution @Target

Sieve Slit removed, Particles emitted at Z=0
