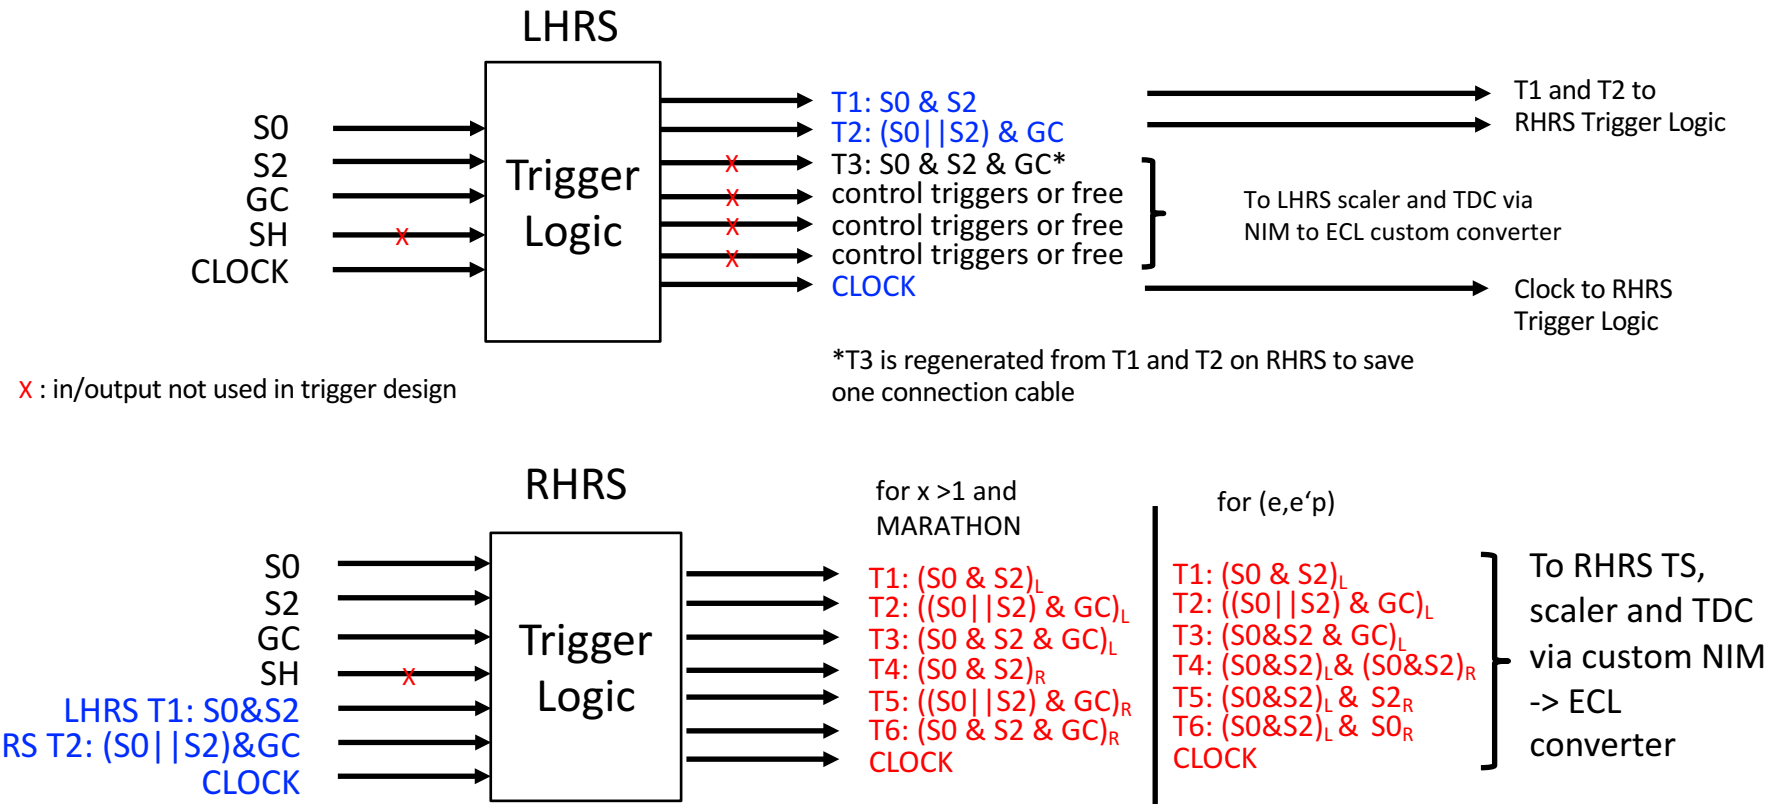
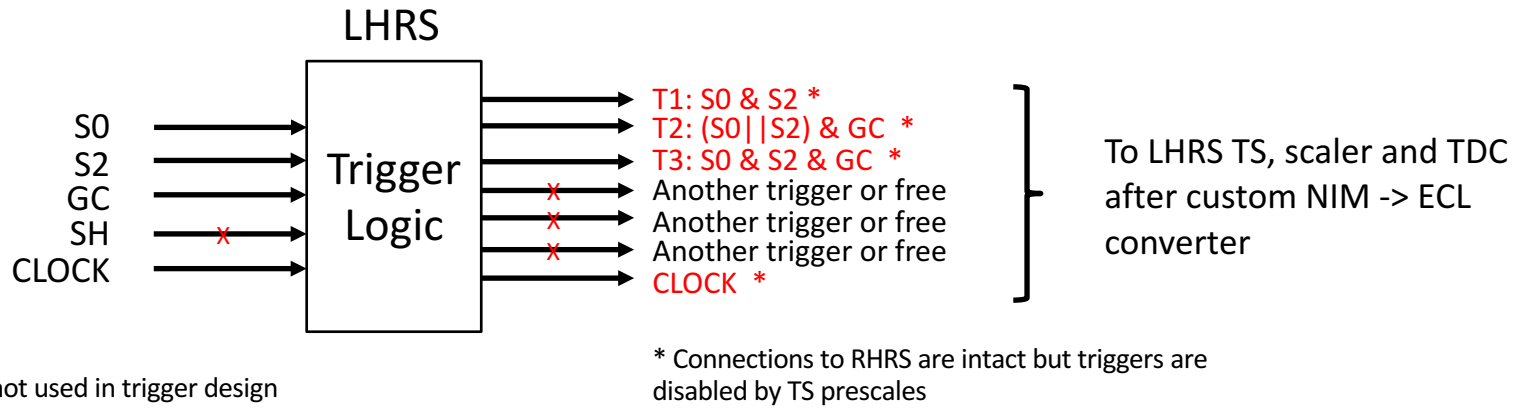
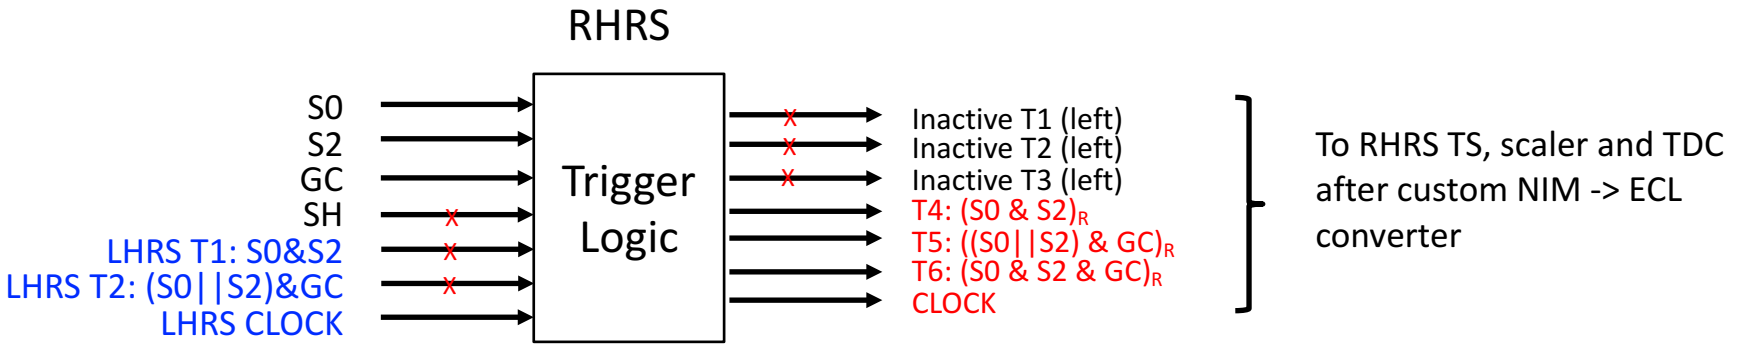
Trigger Logic for 1 DAQ mode



- Trigger logic can be either NIM or MLU or both with one output as control in scaler and TDC
- Some of the signals on the RHRS have to be delayed to be in time with LHRS triggers
- T1 – T3 LHRS triggers - similar for all experiments
- T4 – T6 RHRS triggers (single or concidence triggers)

Trigger Logic for 2 DAQ mode





- Trigger logic can be either NIM or MLU or both with one output as control in scaler and TDC
- T1 – T3 LHRS single triggers
- T4 – T6 RHRS single triggers
- Single triggers are fed to the indivual TS of the corresponding sides
- Using more triggers on the RHRS involves changing cables

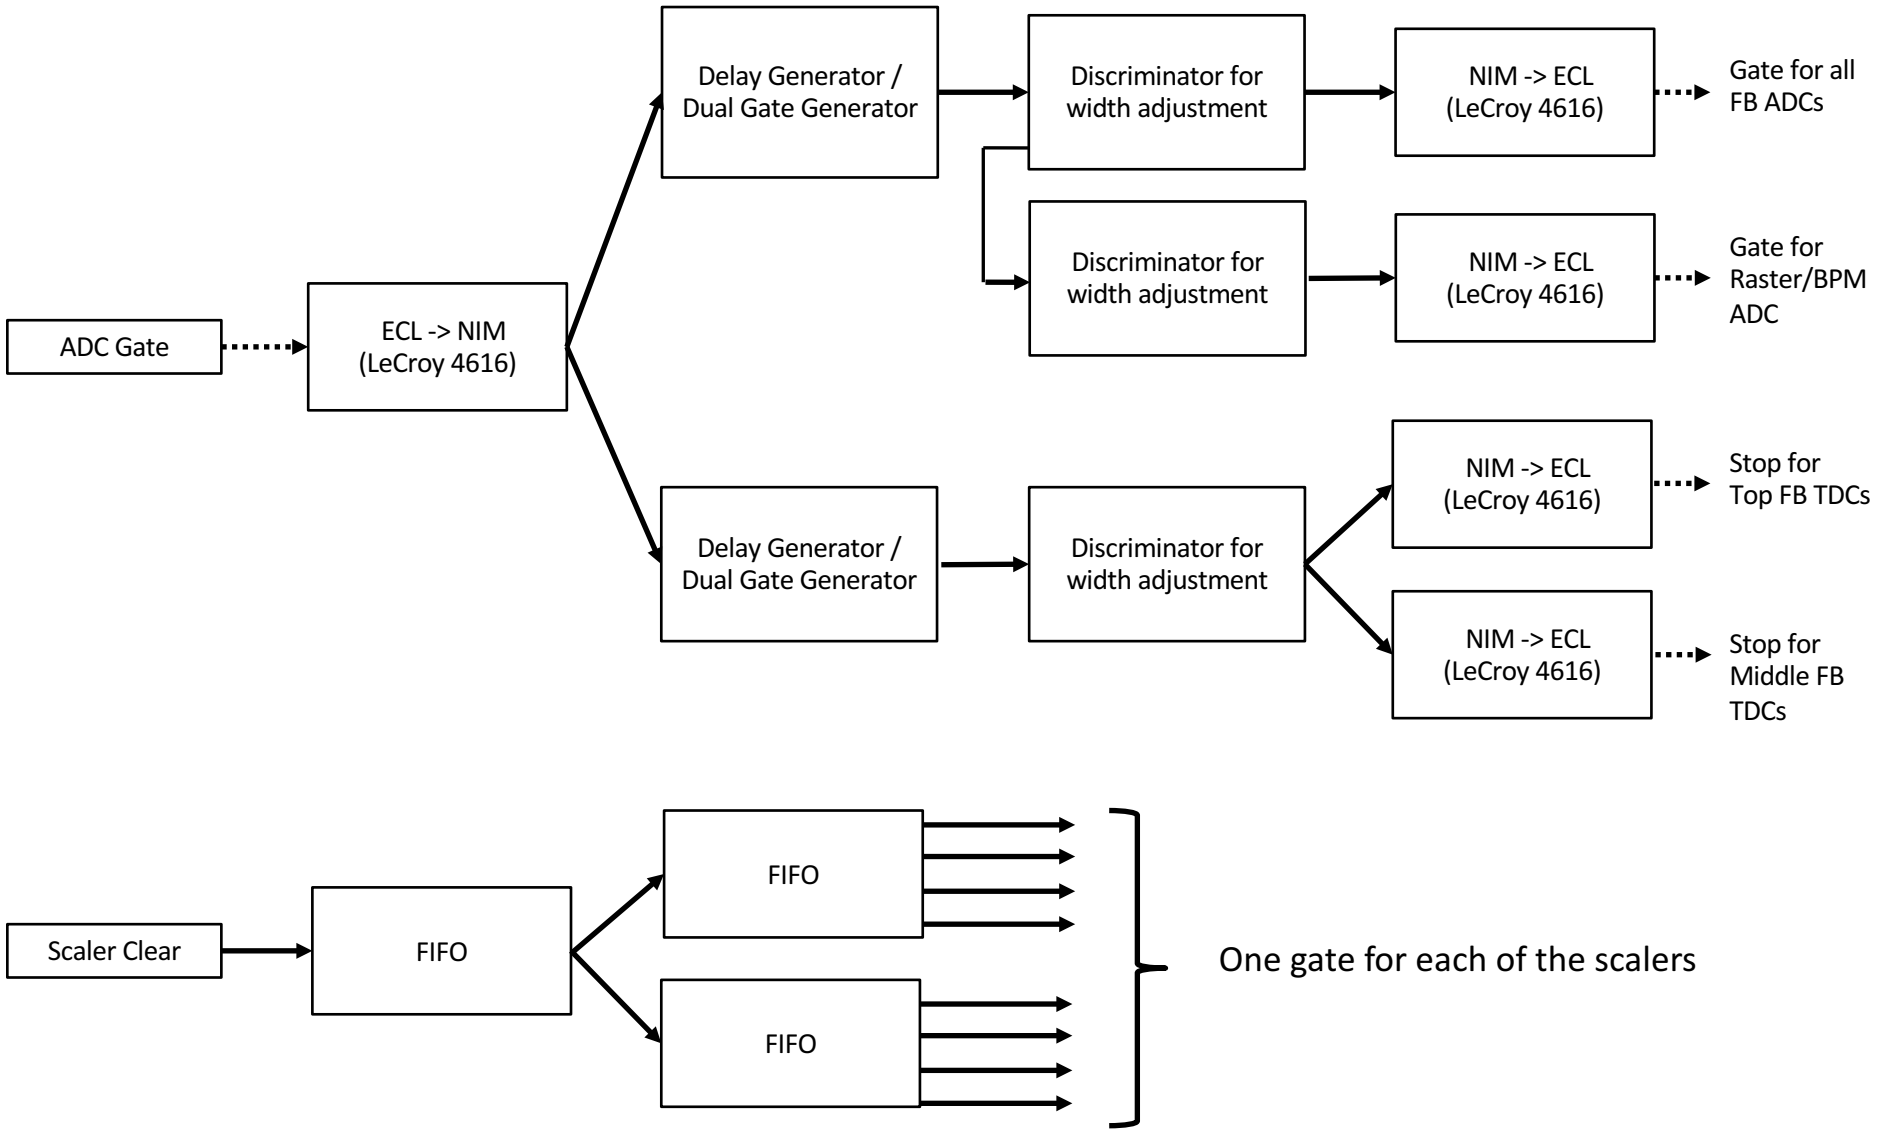
for 1 DAQ setup
for both setups

Flow of gates signals for both arms



Signals Exchange LHRS and RHRS

Necessary signal exchange:

- T1: NIM, fast timing
- T2: NIM, fast timing
- clock: NIM, could be slow timing
- Retiming signal: NIM, fast timing
- Scaler: ECL with LEMO TWINNAX connectors, could be slow timing
- Busy: ECL with LEMO TWINNAX connectors, fast timing
- L1A: ECL with LEMO TWINNAX connectors, fast timing
- Flatband RS485 connection TS to LHRS Fastbus crates

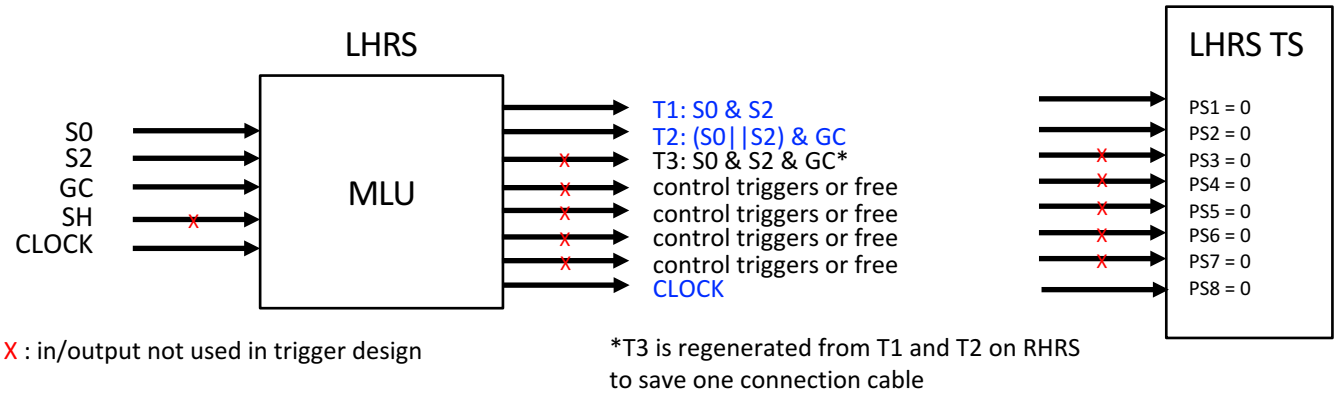
Available cables (found):

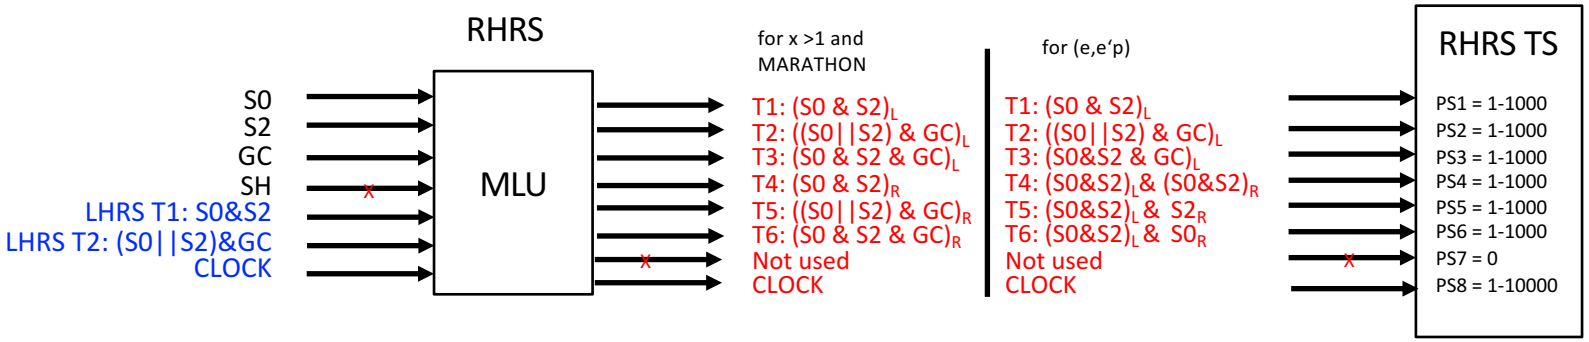
- 6 fast coax cables (230ns, Lemo connectors)
- 3 slower cables (don‘t know exact time, ~0.75c)
- 1 Flatband RS485 cable (not fully operational -> has to be tested)

Available? (not found):

- 2 cables with LEMO TWINNAX connectors

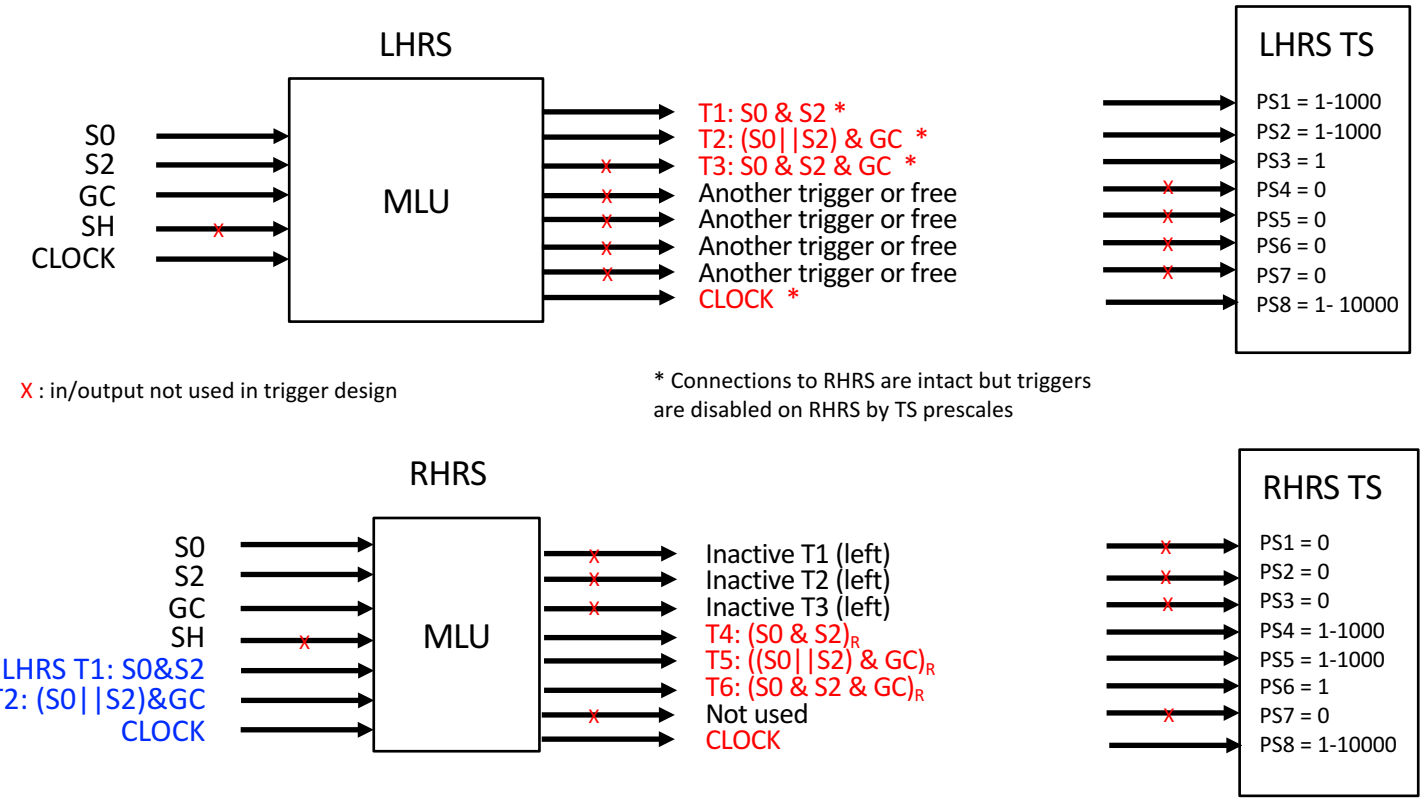
MLU Logic for 1 DAQ mode





- Some of the signals on the RHRS have to be delayed to be in time with LHRS triggers
- T1 – T3 LHRS triggers - similar for all experiments
- T4 – T6 RHRS triggers (single or concidence triggers)

MLU Logic for 2 DAQ mode



- Some of the signals on the RHRS have to be delayed to be in time with LHRS triggers
- T1 – T3 LHRS triggers - similar for all experiments
- T4 – T6 RHRS triggers (single or concidence triggers)

Next slides are not up to date!!!
